USER GUIDE · ORDER TAKING TO ACCOUNTS

GLM Branding POS & Accounting

One system that takes the order, collects the money, runs the job through production and quality control, buys the stock, pays the staff, files the taxes and keeps the books — for shops that print and brand with **DTF, UV, embroidery, large format and laser**.

For shop staff, supervisors, finance and the owner
Prices are in Kenya shillings (KES), VAT at 16%

1 How this guide works, and who does what

The guide follows the money: an order is taken, paid for, made, checked, handed over, and then it shows up in the stock, the tax and the accounts. Each section says where to click and what happens next.

Where to click is written as **Module → Tab**, for example **Finance → Expenses**. The modules are in the menu down the left side of the screen. You only see the modules your role allows.

Roles

The system ships with five roles. The Admin can add more, or change what each role can open, under **Master Data → Roles & Access**. A change takes effect straight away.

Capture orders does not make someone a sales person. A role is a sales person only when *Sales person: the front office can give orders to this role* is ticked. A role such as Finance that is given *Capture orders* can key orders in, but they are GLM's own sales: the person has no Commission statement, no target and no pay from them, and does not appear in the sales-person lists or the Commission menu.

Role	Typically does
Staff (sales person)	Takes General, Film, Artwork and Embroidery orders; works the production jobs assigned to them; sees their own orders and their own commission.
Front Office	The receptionist or cashier: captures orders for the sales persons, takes payments, sees every order, and logs petty cash expenses (its **Petty Cash** entry). Sees no costs and no commission, and nothing else in Finance.
Supervisor	Assigns jobs, inspects quality, raises purchase requisitions, approves discounts above the ceiling, watches payments and every order.
Finance Manager	Finance, Compliance, Accounting, Reports, purchase approval, supplier costs, DTF costs and profit, commission payouts.
General Manager	Everything financial and operational, except the Master Data set-up screens.
Admin	Everything, including **setting the commission rates** and Master Data (staff, roles, price lists, settings, integrations, backups). The Admin role always has full access, so a mistake in role settings can always be fixed.

CONTROLS BUILT IN

Money records are protected by *maker and checker*: an expense can only be amended or deleted by raising a request with a reason, and a **different** manager approves it. Nobody approves their own request. See section 17.

2 Signing in and finding your way

1. **Pick your name** on the sign-in screen and tap your **4-digit PIN** on the pad. The system name and company logo appear at the top of the screen and the sidebar.
2. **Your name does not show on the screen?** The screen says why (for example the list could not be loaded) and offers **try again**. Some browsers' ad or tracker blockers, VPNs and data-saving modes stop the list from loading: switch the blocker off for this site, or press **Sign in with my email instead** and enter the email address your login was sent to, with the same PIN. The emailed login says so too.
3. If an Admin has set a temporary PIN for you, you are asked to choose your own the first time you sign in.
4. Admins with an email address on file may be asked for a **6-digit code sent to their email** after the PIN (Admin sign-in code, **Master Data → Security**).
5. **Five wrong PINs lock the account** — for 15 minutes the first time, then 30, 60 and so on, up to a day. An Admin can reset a PIN at any time.

6 **Forgot your PIN?** Press **Forgot your PIN?** on the sign-in screen, enter the email address on your staff record (the one your login was sent to) and a 6-digit code is emailed to you. Enter the code (valid 15 minutes) with a new PIN — 4 to 6 digits, not an obvious one like 1234; an Admin's is 6 — and sign in with it. Any session open with the old PIN ends. If there is no email on your record, or the email does not arrive, ask an Admin to reset it (**Master Data → Staff & Users**). It needs the mail account to be set up under **Master Data → Email**.

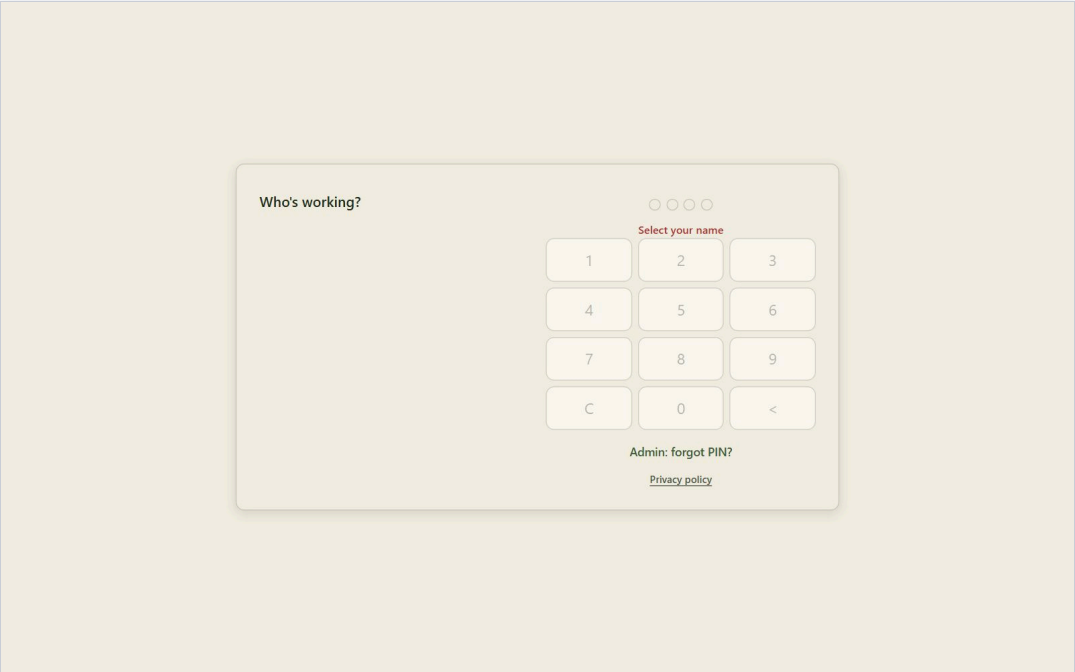

Figure 1 — The sign-in screen: pick your name, then tap your PIN. The logo and system name come from Master Data → Company Info.

The sidebar

Your name and role are at the top. Click them to **Change PIN** or **Log out**. The modules sit below in four groups:

Group	Modules
Sales	Approvals, **New Order**, All Orders (or Orders), Commission. **New Order** is one entry: press it and the screens — General Order, DTF Film, DTF Artwork, UV DTF Film, UV DTF Artwork, Embroidery and Job Costing — are a **row of buttons across the top**; the one pressed opens below. The front office chooses on each order whether it is GLM's own or a sales person's.
Operations	Production, Quality Control, Stock, DTF
Finance	Finance, Compliance, Accounting, Payments, Reports
Admin	Master Data

At the bottom of the sidebar, **Colours** switches the look between **Organic** (the default), **Industrial** and **Nocturne** (a dark scheme). **Collapse** shrinks the sidebar to icons. On a phone or tablet the sidebar becomes a slide-in drawer behind the menu button.

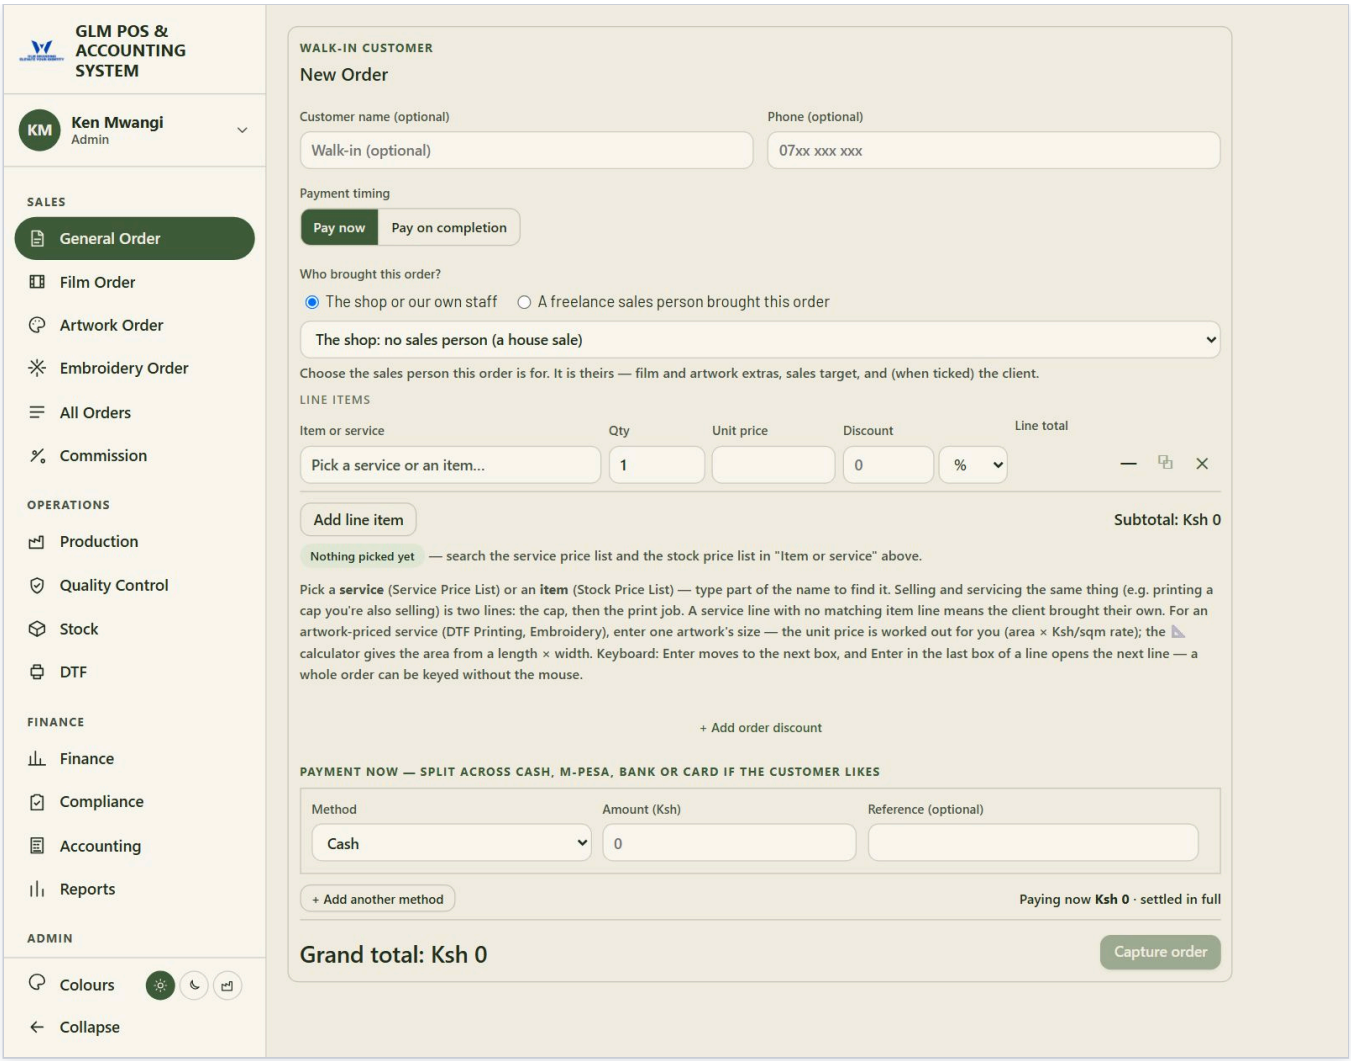

Figure 2 — The sidebar on the left holds your name and every module you may open; the order form fills the rest of the screen.

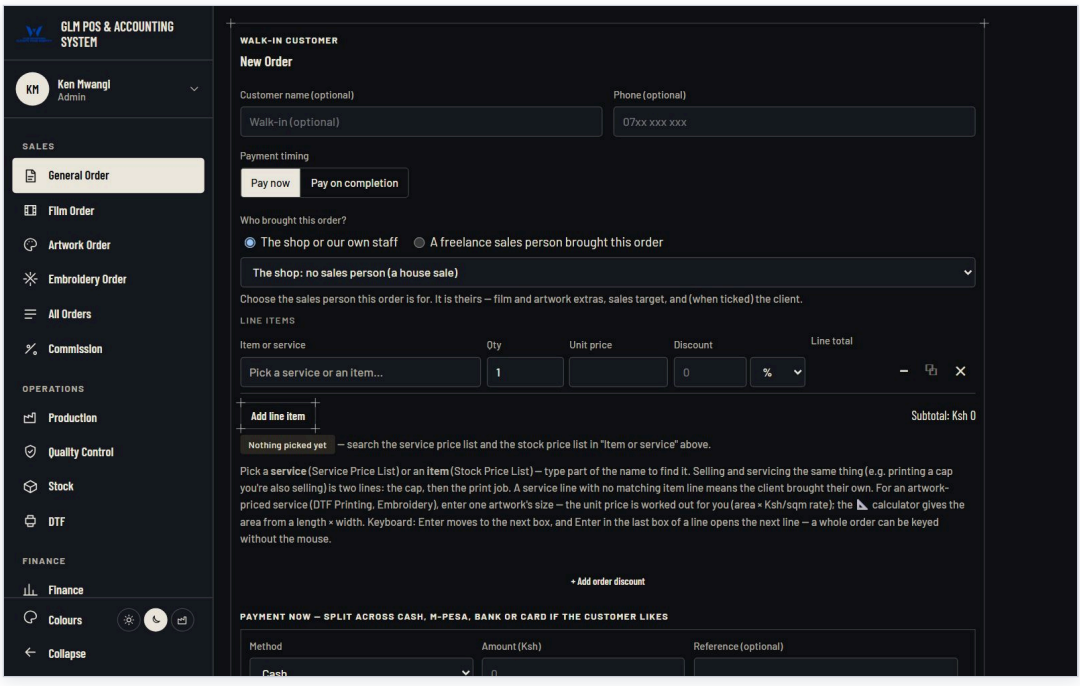

Figure 3 — The Colours buttons at the bottom of the sidebar switch the look. This is the Nocturne (dark) scheme.

Most lists have a **search box**, a date range with presets (This month, This quarter, Year to date) and 10 rows to a page. Dates are shown as dd/mm/yyyy.

Approvals: one inbox for every decision

Open **Approvals** in the menu (everyone has it). It gathers everything that waits for somebody's decision into one page, in sections. **Each section is a place in the system a request was raised, in the order of the menu**, and only the places that have something show:

Head (where it was raised)	What waits there	Who decides
General Order, **DTF Film Order**	Nothing needs approval on these screens today; they appear here if it ever does.	—
DTF Artwork Order	A DTF artwork job priced below the recommended price.	DTF managers, Admin
UV DTF Film Order	A unit price discount asked for on **UV Pen Costing** or **UV Flatbed**.	Finance, the General Manager, Admin
UV DTF Artwork Order	A UV DTF artwork job priced below the recommended price.	DTF managers, Admin
Embroidery Order	An embroidery job priced below the recommended price.	DTF managers, Admin
Job Costing	A price agreed with a client that is under the lowest allowed without approval.	Finance, the General Manager, Admin
Finance	A change to a recorded expense; an expense, payroll entry or petty cash top-up someone asks to delete.	Another Finance manager, Admin
Stock	A stock requisition.	Those who approve stock, Admin
People (HR)	Leave asked for.	Those who manage HR, Admin

Inside a section, a small tag on each request says what kind it is (for example *Unit price discount · UV Flatbed*).

- **Waiting for me** is what you may decide. Press **Approve**, or **Turn down** (a reason is needed for a price or a discount; it is optional for the rest). The buttons at the top of the page jump to each head. On **My requests**, an approved request has a highlighted button that says what to do next — **Continue — capture the order** for a Job Costing price or a unit price discount (it opens the quote, or the price picker with the approved discount already applied, ready to capture), **Open the order — it can now go ahead** for a price below the recommended one, and **Open the order** once an order has been captured from a quote; a turned-down price says **Agree another price**. **Open** goes to the very thing: a Job Costing price opens that saved quote; a price below the recommended one opens that order; a unit price discount opens UV Pen Costing or UV Flatbed with the pens or the size and pieces already filled in, and the approved discount already applied when the request is yours and approved (it is then

ready to capture as an order). **Leave** sits under **People (HR)** and is decided on the People (HR) page, where it can ask you to confirm; the inbox lists it there so it is not missed.

- **My requests** is how your own requests went: waiting, approved (and by whom) or turned down (with the reason), for two weeks. You never decide your own request: it is not in your Waiting list.
- Each kind keeps its own rules: the inbox only gathers them and uses the same decision as the screen the request came from.

Notifications. The menu shows a red number on **Approvals**: the requests waiting for you, plus any decisions on your own requests you have not looked at (opening **My requests** clears those). The same number is in the browser tab's title, the page checks every minute and when you return to the window, and a short notice (*A new request is waiting for your decision*) appears with an **Open Approvals** button. When email is set up (Master Data), the people who can decide are also **emailed** when a request is raised, if they have an email address (Master Data → Staff & Users); an Admin can switch this off with the box at the bottom of the Approvals page.

---

3 Setting the business up (Admin, once)

Do these in order on day one. Each is under **Master Data** unless stated. The system works with sensible starting values, but your prices, people and payment details must be yours.

#	Where	What to set
1	**Company Info**	Company (trading) name, registered name, address, logo, phone numbers, website and social links, KRA PIN and VAT details. Everything you enter here prints on invoices, quotations and receipts. Also the *system name* shown on screens, and the on/off switch for the Commission module.
2	**Staff & Users**	Add each person with first and last name (middle name optional), role, email (for PIN emails) and PIN. **Edit**, **Reset PIN** and **Delete** are at the end of each row. Switching someone off ends their sessions at once but keeps their history.
3	**Roles & Access**	Tick which areas each role can open. After creating a custom role, tick *View all orders* if it should see everyone's orders.
4	**Business Heads**	The lines of business you report on: *DTF Printing, UV DTF Printing, UV Printing, Laser Engraving, Large Format Printing, Embroidery, Printing & Publications, General Order* are created for you. Add, rename or retire heads.
5	**Service Price List**	Every service you sell with its **unit** (piece, sqm, metre…), **price** (VAT included), description, size and **business head**. Tick *Charges pressing fee* or *Artwork pricing* (priced by area) as needed. **Download Excel / Upload Excel** lets you edit hundreds of lines at once; the upload shows what will be added, changed or refused and applies nothing until you press *Apply*. **Market survey sheet** (Admin) downloads a different Excel file for researching competitors: every service and stock item on the lists, and the jobs the system prices by formula (DTF and UV DTF, UV pens, embroidery, business cards, signage, eulogies, company profiles, brochures), each with the exact specification to ask for and empty columns for five competitors' prices — **none of our own prices are on it**, so it can be handed to whoever does the survey.
6	**Stock Price List**	Items you stock and sell (caps, polos, mugs, blanks, consumables) with size, price, on-hand quantity, **reorder level** and usual business head.
7	**Discount Rules**	The discount ceiling. A discount above it needs supervisor approval.
8	**Embroidery Pricing**	The stitch-count price, the quantity price table, set-up and design-origination charges. See section 5.5.
9	**DTF → Setup**	Film price band (minimum and standard price per metre), charge per running metre for artwork, wastage tolerance. Then install your first roll under **DTF → Rolls**.
10	**M-Pesa / NCBA**	Your Paybill or Till and the Safaricom Daraja keys, then **Save → Test the connection → Switch on**. Start in *Sandbox*, move to *Production* with live keys. NCBA Bank customers can use NCBA's STK push and payment notifications instead.

11	**Email / WhatsApp**	Connect the mail account and the WhatsApp Business number used to send invoices and receipts as PDFs.
12	**Backup / Security**	Set an automatic backup schedule (and optionally Google Drive). Turn on the Admin sign-in code.
13	**Finance → Petty Cash**	Record the opening petty-cash float (top-up).
14	**Accounting → Journals**	Enter the **opening balances** once: bank, cash on hand, M-Pesa float, owner's capital. The chart of accounts builds itself.
15	**Compliance → Employees**	For each employee: National ID, KRA PIN, SHIF number and gross monthly salary. These print on payslips and the P9.

> **BEFORE YOU GO LIVE**
> The system is seeded with demonstration users. Add your own Admin, then delete the demonstration accounts. Check every price and rate you entered — figures such as the minimum wage, withholding-tax rate and wastage tolerance are starting values to confirm with your accountant.

4 The life of an order

Every order, whatever the product, takes the same road. Knowing the road makes every screen predictable.

1 Capture	2 Pay	3 Order Received	4 In Production	5 Quality Check	6 Ready	7 Completed
Order or quotation taken. Prices checked against the price list.	Cash, M-Pesa, bank or card — now, or on completion. Receipt printed.	Waiting in Production to be assigned.	Assigned in-house, or sent to a supplier.	Inspected: pass, or back to production.	Passed. Waiting for the customer.	Handed over. The only way to complete.

In parallel, the money side is keeping up on its own:

- **VAT** on the sale is recorded the moment the sale is made (output VAT), and VAT on your purchases and expenses is recorded as input VAT.
- The sale, the payment, the stock used and any supplier bill are posted to the **books** automatically; there is no second entry.
- **Commission** is earned as the customer's money arrives.
- Unpaid balances appear under **Pending Payments** and in **Accounting → Receivables**.

TWO KINDS OF ORDER

Walk-in orders are sales the moment they are captured: customer optional, paid at the counter, thermal receipt printed. **Corporate** orders start as a **Quotation** for a registered corporate client, become an **Invoice** on acceptance, and are collected on credit terms.

5 Taking an order

GLM's sales and the sales persons' — one menu, one price list

There is **one price list** and **one place to take an order**: **New Order** in the menu, with the seven screens — General Order, DTF Film, DTF Artwork, UV DTF Film, UV DTF Artwork, Embroidery and Job Costing — as a row of buttons across the top. Whose sale it is — **GLM's own** or a **sales person's** — is decided on the order, not by the menu, so you can compare the two in **All Orders** and in **Reports → GLM vs Sales Persons**.

- **The front office allocates every order.** At the top of each order screen they **choose who the order is for**: *GLM — the shop's own sale*, or a sales person. Nothing is chosen for them — the box is red and the order cannot be taken until they choose. An order allocated to GLM is credited to nobody; one allocated to a sales person counts towards that person's commission, target and month.
- **A client in a sales person's Client Register** chooses the allocation: pick the client and the order goes to their sales person.
- **Sales persons can capture their own orders** when the front office is not doing it — an order they key is theirs, with nothing to choose. This is a switch per person: **Commission → Pay details → Captures own orders** (the same switch as the order-taking one in Master Data → Staff & Users). Switched off, only the front office captures for them; the front office can always capture for them either way.
- **All Orders** has a filter: **All sales**, **GLM's own** or **Sales persons'**, and a *Sales person* tag marks the sales persons' orders. Which side an order is on follows who it is credited to, so older orders count too.
- **Prices are the same** for both. The old *GLM Sales / Freelancer Sales* menus no longer exist; an old address that begins **/freelancer** simply opens the same screen. Prices that were set for freelancers are no longer used.

5.1 General Order (walk-in) STAFF · FRONT OFFICE

Used for everything that is not film, artwork or embroidery: UV prints, large-format banners, laser engraving, mugs, caps, shirts and plain product sales. Open **General Order**.

1. **Customer.** Name and phone are **optional** for an ordinary walk-in. They become required when the client is to be credited to a sales person (see *Who brought this order?* below), because the client must be identifiable to be credited.

2. **Add lines.** Search one list that holds both your services and your stock. Each line has a quantity and a price taken from the price list (prices include VAT).
   - **Materials and services are separate lines.** Selling a printed cap is two lines: the cap (a material) and the printing (a service). A service line with no material line means the customer brought their own item.
   - **Heat press fee.** A service flagged *Charges pressing fee* (such as DTF Printing) asks you to pick the pressing fee per piece from a fixed list. A tag warns you if it is left blank.
   - **Priced by area.** A service flagged *Artwork pricing* asks for the artwork size in square metres and the number of pieces; the price per piece is worked out for you. The 📐 **calculator** converts length × width in centimetres to square metres.
3. **Discounts.** Put a discount on a line, or use + *Add order discount* (percentage or amount). If it goes above the ceiling set in Discount Rules, a tag reads *Exceeds standard discount — needs supervisor approval*.
4. **Payment timing. Pay now** (the default): the customer pays at the counter, and you record how. **Pay on completion**: the customer pays when they collect.
5. **Who brought this order?** Choose *The shop or our own staff* — a house sale, or pick the sales person the order is for — or *A freelance sales person brought this order*. Only when the Commission module is switched on.
6. **Payment now.** Split the amount across cash, M-Pesa, bank transfer and card; **Rest** fills in what is left. For M-Pesa, enter the phone number and press the **STK push** button: the customer gets a prompt on their phone (see section 6).
7. Press **Capture order**. The thermal receipt (80 mm, two copies, heavy black type) opens for printing, and the order is created at the stage *Order Received*.

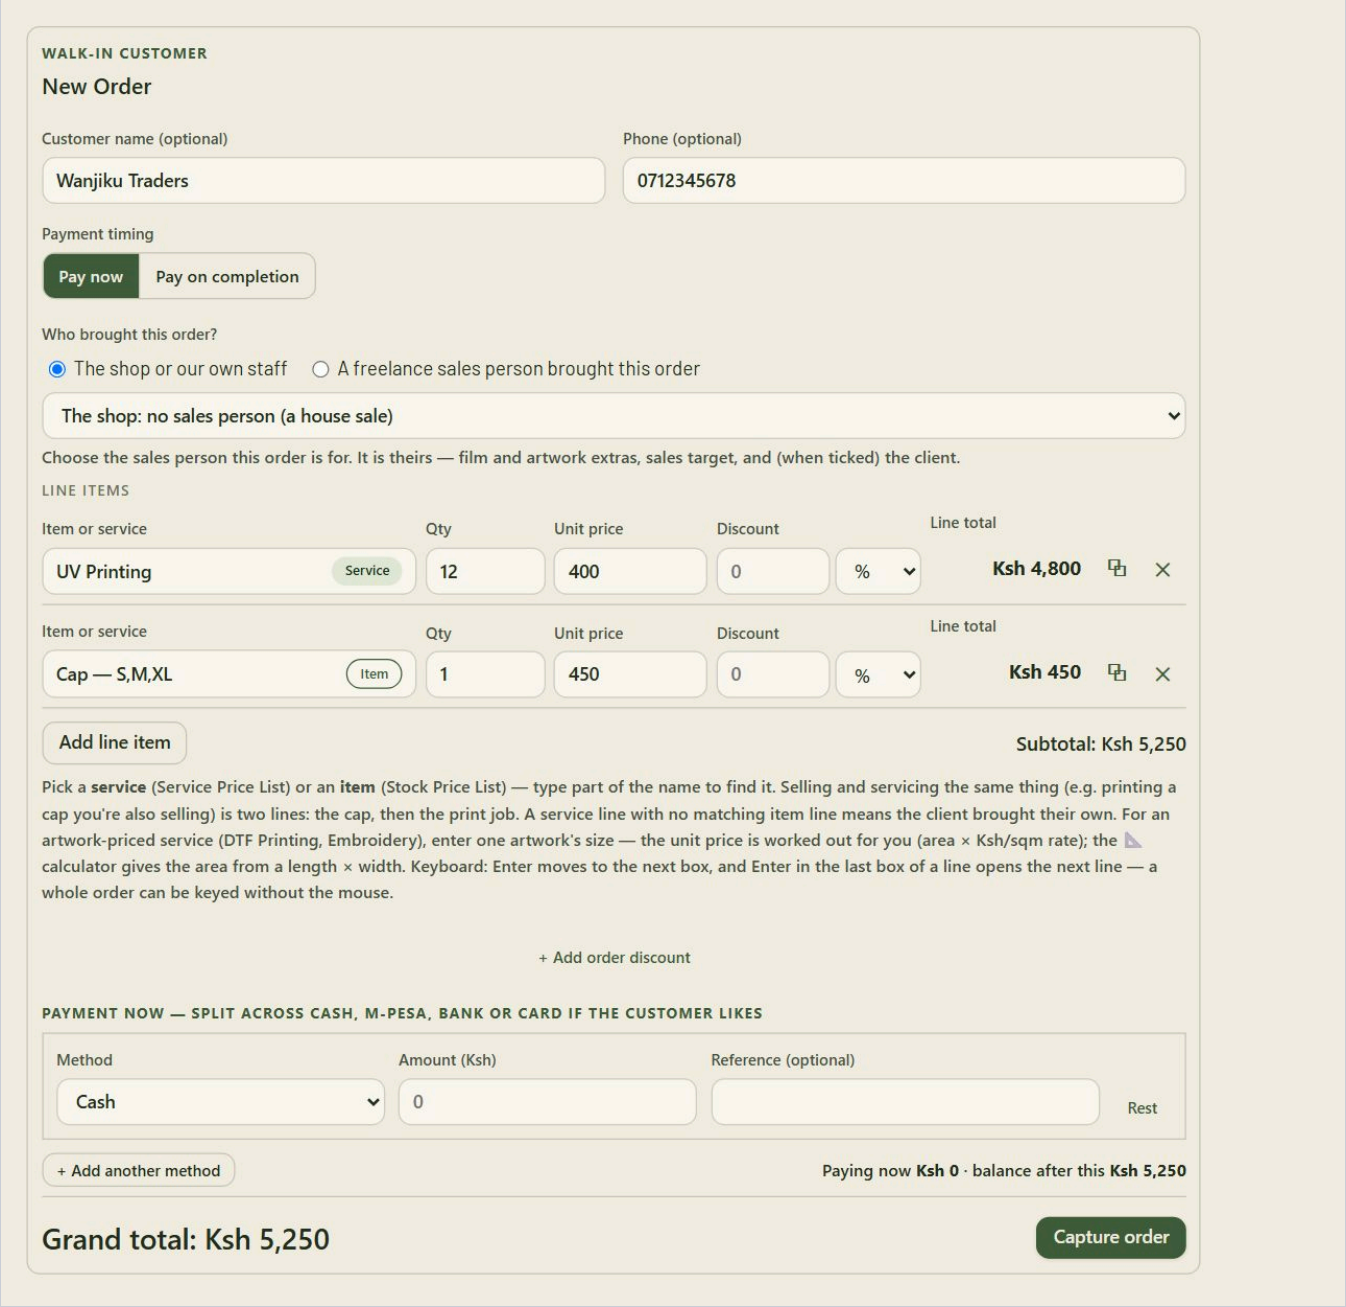

Figure 4 — A General Order: customer, payment timing, who brought the order, the lines picked from the price list, and the payment panel at the bottom. The total updates as lines change.

WHO BROUGHT THIS ORDER? — COMMISSION

If the Commission module is switched on, every order asks **Who brought this order?**

- **The shop or our own staff.** Leave it as *The shop: no sales person (a house sale)* for walk-ins and clients the shop already had — no name or phone is needed, and a house order earns no sourcing commission. If a staff member brought the client in through their own network, tick *"[Name] brought this client in — credit them for 12 months"*. The client then stays credited to that person for the ownership period, and every order from them counts towards that person's sales, whoever captures it. A client can only be credited to one person; if someone else already owns them, the system says who.
- **A freelance sales person brought this order.** Pick the freelancer. They are credited on that order alone and paid weekly (section 14). An order is credited to a staff member *or* a freelancer, never both.

Front Office staff capturing for a sales person choose the sales person in the same place.

5.2 Corporate quotation and invoice FINANCE · STAFF

For companies buying on account. Corporate clients are kept under **Finance → Corporate Clients** with their **credit days**, email, phone and an optional **contact person**, who is printed as *Attn:* on their documents.

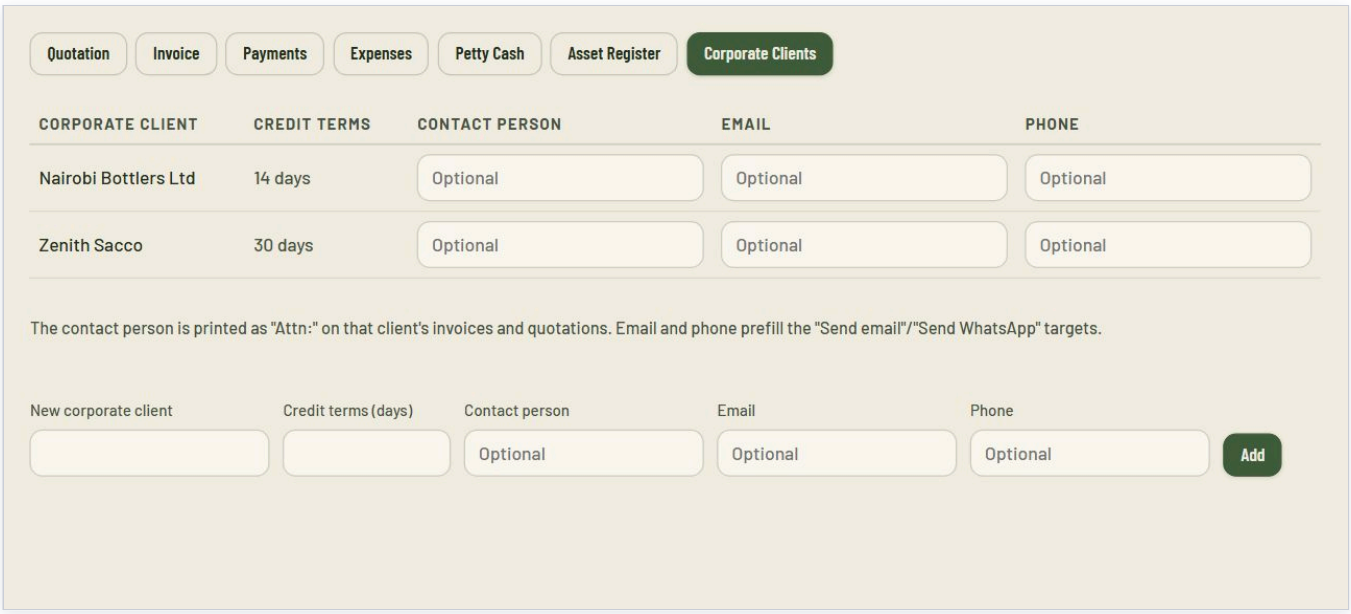

Figure 5 — Finance → Corporate Clients: each client with its credit terms, contact person, email and phone.

1. **Finance → Quotation**: choose the client, add the lines as for a General Order, apply any discount and save. The order is a **Quotation** (it is not yet a sale, so it does not count as revenue or VAT).
2. **Print** it on A4, or press **Email** or **WhatsApp** to send it to the client as a PDF. The email or phone is prefilled from the client record.
3. When the client accepts, open the order and press **Convert quotation to invoice**. It now counts as a sale, and its due date is set from the client's credit days.
4. Invoices are collected under **Finance → Invoice** and **Finance → Payments**; what is owed appears in **Accounting → Receivables**.

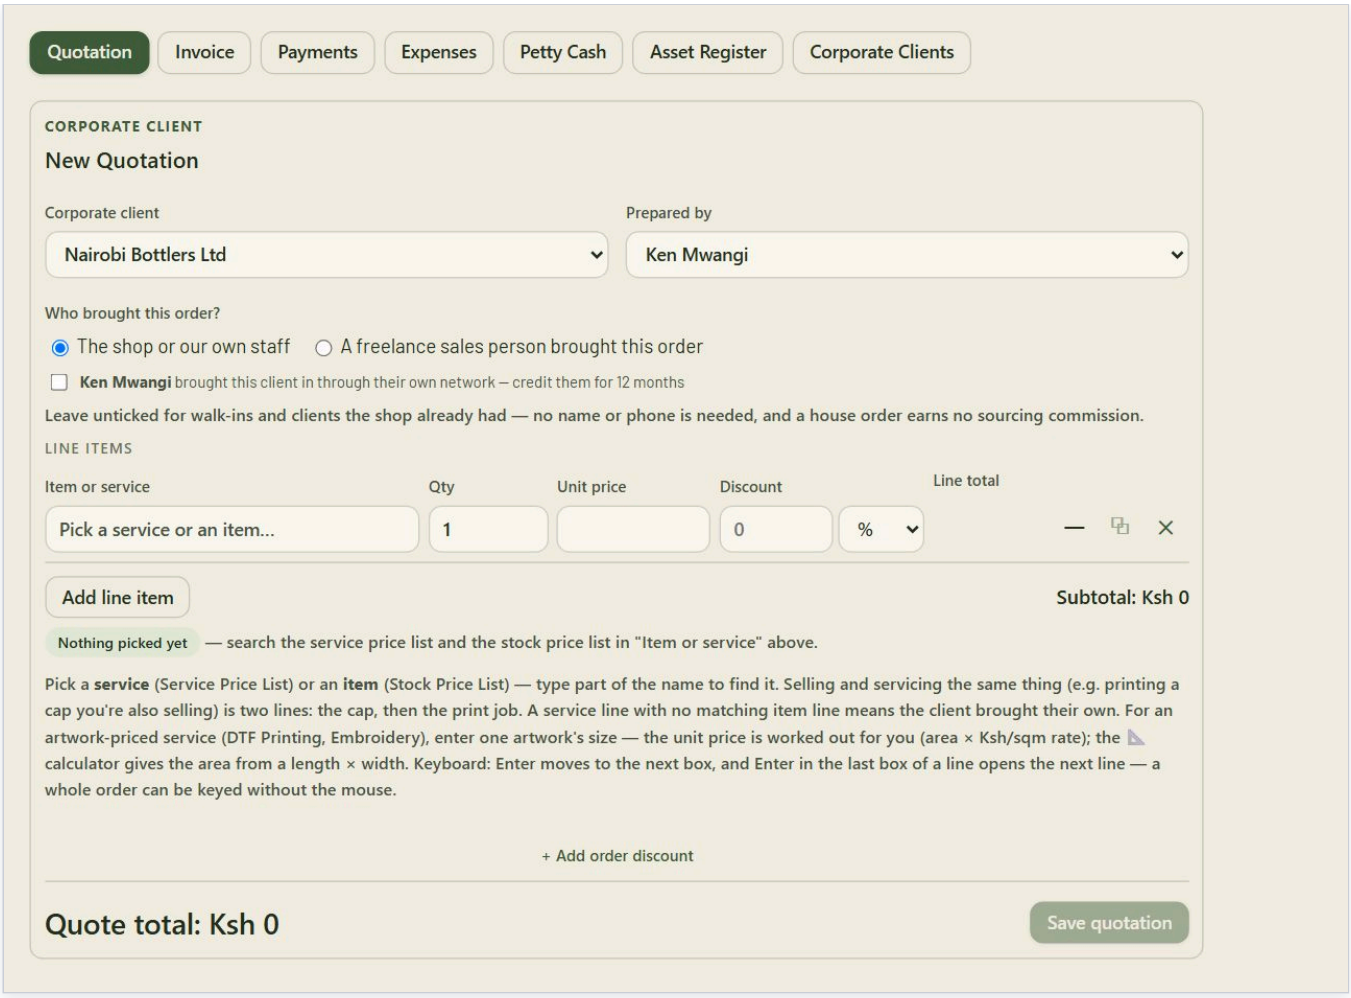

Figure 6 — Finance → Quotation: choose the corporate client and who prepared it, then add lines as for any order.

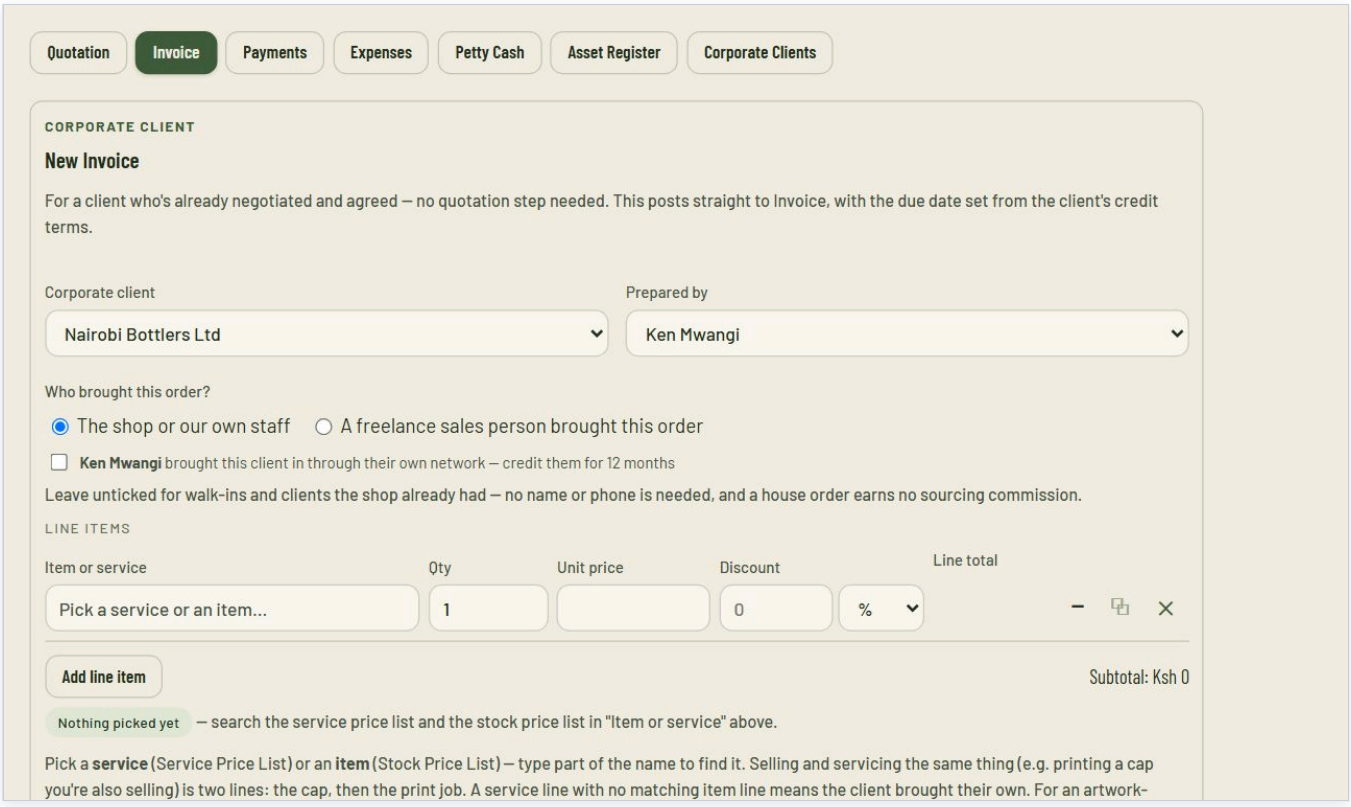

Figure 7 — Finance → Invoice lists the invoices; balances and due dates show what is still to collect.

The invoice shows **Subtotal (incl. VAT)**, **VAT @ 16%**, **Total Due** and **Balance Due**.

5.3 DTF Film Order (film by the metre) STAFF

Open **DTF Film Order**. You are selling printed film from the current open roll.

1. Choose the **Roll**, add the client (optional), then enter the **metres** and the **price per metre**. The price must be inside the band set in DTF → Setup: not below the **minimum**, and it can go above the **standard** price.
2. Press **Continue** to take the payment (in full or part, any mix of methods) as in a General Order; the amount paid cannot exceed the total.
3. The sale is booked against the roll, which reduces its remaining length.

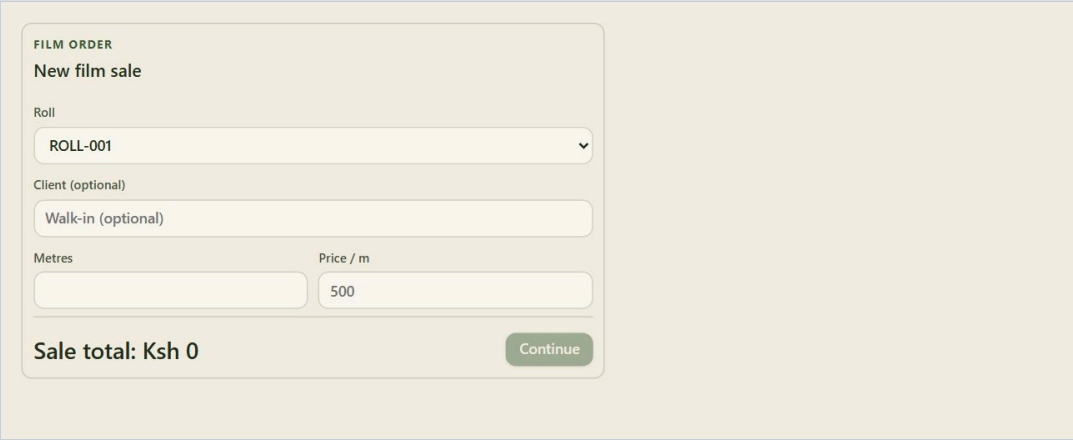

Figure 8 — DTF Film Order: the roll, the length sold and the price per metre. The sale total updates as you type.

> **WHY IT MATTERS**
> The premium you charge above the minimum price per metre is what earns film commission, so pricing well is rewarded. Prices below the minimum are refused by the system, not just by the form.

5.4 DTF Artwork Order (a priced list) STAFF

Open **DTF Artwork Order**. A customer's designs printed on transfers and pressed onto garments. You arrange the artworks on the film, note the **length of film used**, and list them — **the prices are yours**: nothing is recommended and nothing waits for approval. The **print**, the **heat press** and, when we supply it, the **garment** are three separate prices, so each cost is shown on its own.

1. Choose the **roll** and enter the **length of film used (m)** — measured once the artworks are arranged on the film. This is what comes off the roll, and it is the **only film figure the system tracks**: no width or height is asked for.

2. List the artworks, one row for each client and kind of artwork: the **client**, **what it is** (optional — "left chest", "back print"), **how many**, the **artwork each** (the print only), the **heat press each** (typed, for now) and the **garment**. Every artwork in a row has the same price, and **every artwork is heat pressed**, so the row's heat press price is required.

3. **Garment, row by row:** choose **Client's own garment** when the client brought it — nothing is charged for it and nothing leaves stock; the row is charged the artwork and the heat press only. Or choose one of **our stock items** (a cap, a polo shirt… in its size): one garment is supplied for each artwork of the row, at the **stock price list's price**, which you cannot change, and it leaves stock with the order. The list shows how many are in stock and warns when the row needs more than there are (the sale still goes through; the count then needs correcting). Different clients, or different rows of one client, can differ.

4. The **total** of a row is the number × (artwork + heat press + garment). The screen shows the artworks, the heat press and the garments separately, then the total.

5. Name a client on a row to give them their own order; **rows of the same client go on one order**. Each row becomes lines on the order: *DTF Printing — left chest*, *DTF Heat Press — left chest on the client's own garment* (or *on our Polo Shirt*) and, when ours, the garment itself.

6. Press **Continue**: choose who the sale is for (the front office), each client's phone and what they pay now (any mix of cash, M-Pesa, bank and card, with the M-Pesa STK push), and **Record**. One order is made for each client.

- **The screen also shows** the **film used** (the length you entered, in metres), the artworks, heat press and garment amounts, and the total.
- **The film comes off the roll once**, as the length entered; each client's order carries its share by the **number of artworks**. The film's own revenue is the **artworks (the print)** only — the heat press and the garments are other lines of the order.
- **Commission:** the order counts towards your sales like any other (money received, net of VAT, in the month). There is no recommended price, so no artwork premium, and no price approval.

5.4a UV DTF Film Order STAFF

Open **UV DTF Film Order**. It works exactly like the DTF Film Order, but sells printed **UV DTF film** from a UV DTF roll (a 30 cm wide, 50 metre roll). Choose the open **UV-** roll, the client and the metres.

- The standard price is **KES 1,500 a metre, VAT included**. The price can be raised; it **cannot go below the floor of KES 1,200 a metre**.
- Commission is the same as on DTF film: what you charge **above the floor** earns a share, by the same table (**Commission → Rates**), as the customer pays.
- Press **Continue** to take the client's details, any blank items sold with it and the payment. The order is numbered **U-6001** and up and sits under its own line of business, **UV DTF Printing**.

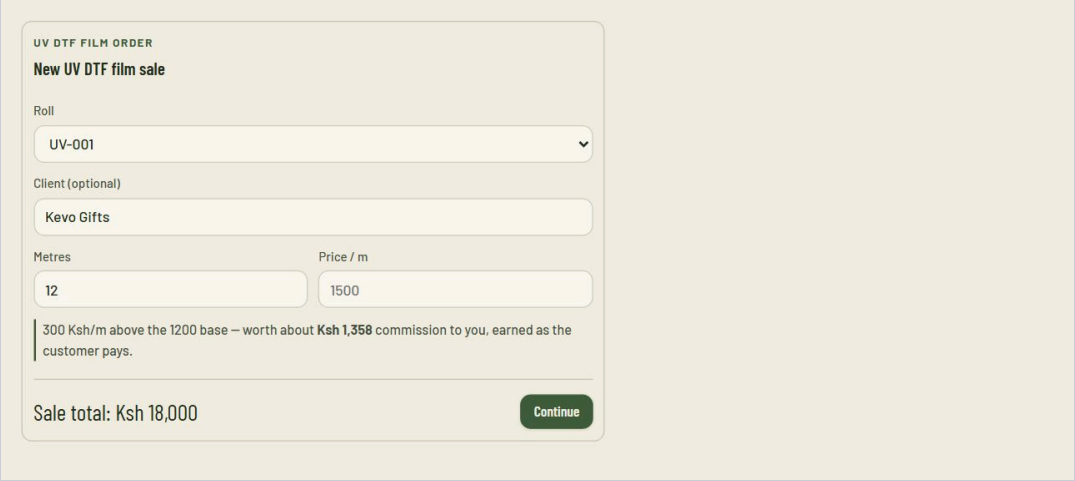

Figure 9 — UV DTF Film Order: the roll, the metres and the price per metre (KES 1,500 unless changed, never below 1,200), and the sale total.

UV PEN COSTING (A TAB ON THE UV DTF FILM ORDER)

The UV DTF Film Order screen has three tabs: **Film sale**, **UV Pen Costing** and **UV Flatbed** (below). UV Pen Costing is a **price picker** for UV-printed pen branding: enter the **number of pens** (type it, use − and +, or tap a quick pick: 10, 20, 50, 100, 250, 500, 1,000, 1,500) and the screen shows the **price per pen** and the **total to charge**, so nobody has to ask for the price. **Clear** starts again.

- **The whole order is charged at one rate**, set by its quantity — not stepped. To start with: **1–99 pens 20/=**, **100–499 pens 15/=**, **500–1000 pens 12/=**, **1001 and over 10/=**. For example 450 pens come to 15/= each, **6,750/=** (VAT included, as every price in the system is). The tier the order falls in is highlighted.
- **Upsell.** When the customer is a few pens short of a cheaper tier the screen says so — *Add 50 more pens (500 total) → 12/= each. Customer pays 750/= less overall* — and **Set to 500 pens** changes the quantity in one tap. (When the extra pens would cost more in total, it says what the total becomes instead.)
- **Unit price discount — subject to approval.** Under **Unit price discount**, choose **Ksh off each pen** or **% off the unit price** and type the amount. **Finance Manager, General Manager and Admin** give it straight away: whatever they type is the discount. **Everyone else asks**: once the number of pens is entered, press **Ask for approval**. The request waits under the box (*waiting for approval*) and appears for Finance, the General Manager and Admin under **Waiting for your decision**, where they press **Approve** or **Turn down** (a reason is needed to turn it down, and nobody approves their own request). Once it is approved, press **Refresh**, then **Apply the approved discount**: the price drops (a 15/= pen with 2/= off is 13/=) and the order can be captured. An approval is for **that job only** and is used **once**: change the quantity and it must be asked for again. The system takes the discount from the approved request, never from what is typed on the screen. For example 450 pens at 15/= are 6,750/=; with 2/= off each, 450 × 13 = **5,850/=**. The cheaper-tier hint is not shown on a discounted order.
- **The rates are kept in the system.** Anyone with DTF access sees them; **only an Admin** changes a rate, by tapping it, or uses **Edit tiers** to change where a tier starts, add a tier or remove one (the first always starts at 1 pen). A change applies to everyone at once.

Capture as order. Once the customer agrees, press **Capture as order** under the price. The usual order popup opens — client name and phone, who brought the order, any merchandise sold with it, and how it

is paid (in full, part now, or later) — and **Print** creates the order and prints the receipt or invoice. The pens go on the order at the rate for their quantity (the system works the rate out again itself, so it always matches the tiers), under the price-list service **UV Pen Branding**. It is an ordinary order: it appears in All Orders with a U- number, goes through Production, and a client you sourced counts as it does on any general order. No roll is used.

UV FLATBED (A TAB ON THE UV DTF FILM ORDER)

The UV DTF Film Order screen has a third tab, **UV Flatbed**: a **price picker** for printing diaries and other flat items on the UV flatbed. Enter the size of the **artwork** in cm — the part that is printed, not the whole diary — as **width × height** (or tap a size such as **5 × 5**, **10 × 15**, **A5**, **A4** or **Full 30 × 50**) and the **number of pieces**. The screen shows the band the artwork falls in, the **price per piece** and the **total to charge**. Anything you type under *What it is* (for example *2027 diary covers*) goes on the order.

- **The artwork is priced by its area, in bands**: every 150 cm² (about an A6) costs 50/=, up to **500/= for the full 30 × 50 cm**. To start with: **up to 300 cm² 100/=**, 301–450 cm² 150/= (an A5 cover), 451–600 cm² 200/=, 601–750 cm² 250/= (an A4), 751–900 cm² 300/=, 901–1,050 cm² 350/=, 1,051–1,200 cm² 400/=, 1,201–1,350 cm² 450/= and 1,351–1,500 cm² 500/=. The band the artwork falls in is highlighted. Nothing is worked out from how many diaries fit the bed: each diary is charged for its own artwork.
- **Minimum price for a piece.** A very small artwork (a logo, a few words) is never charged less than the minimum, 100/= to start with. When the minimum is more than a band's price, the screen says *the minimum price for a piece*.
- **Volume discount — applied by Finance, the General Manager or an Admin.** A bigger run earns a discount on the whole run, set by how many pieces there are — to start with **1–19 none, 20–49 5% off, 50–99 10% off, 100 and over 15% off** — but it is **not given automatically**. Under **Discounts**, the box **Apply the volume discount** can be ticked only by Finance Manager, General Manager or Admin; for everyone else it is greyed out and the screen says what the run would earn (*This run earns 5% off. Ask Finance, the General Manager or an Admin to apply it*). When the customer is a few pieces short of the next discount, the people who can apply it also see that, and **Set to … pieces** changes the quantity in one tap.
- **Unit price discount — subject to approval.** Under **Unit price discount**, choose **Ksh off each piece** or **% off the unit price** and type the amount. **Finance Manager, General Manager and Admin** give it straight away: whatever they type is the discount. **Everyone else asks**: once the artwork size and the number of pieces is entered, press **Ask for approval**. The request waits under the box (*waiting for approval*) and appears for Finance, the General Manager and Admin under **Waiting for your decision**, where they press **Approve** or **Turn down** (a reason is needed to turn it down, and nobody approves their own request). Once it is approved, press **Refresh**, then **Apply the approved discount**: the price drops (a 150/= piece with 10/= off is 140/=) and the order can be captured. An approval is for **that job only** and is used **once**: change the quantity or the size and it must be asked for again. The system takes the discount from the approved request, never from what is typed on the screen. It comes off the price of each piece first, and then the volume discount, if it is ticked, comes off the printing. A discount as big as the price of a piece, or 100%, is refused. The volume discount is not asked for: only Finance, the General Manager or an Admin applies it.
- **Setup fee is optional.** Tick **Add the setup fee** (200/= to start with) when the job needed a layout; it is added once to the job, after the discount. Leave it unticked and nothing is added.

- An artwork bigger than the largest one (30 × 50 cm, either way round) gets no price; the screen says so. VAT is included, as every price in the system is. For example 20 A5 covers are 20 × 150 = **3,000/=**; with the volume discount applied they are **2,850/=**, and with 10/= off each piece as well, 20 × 140 = 2,800/= less 5% = **2,660/=**.
- **The prices are kept in the system.** Anyone with DTF access sees them; **only an Admin** uses **Edit prices** to change the minimum price for a piece, the setup fee, the largest artwork, each band (where it ends and its price) and the volume discount lines. The last band must reach the largest artwork. A change applies to everyone at once.

Capture as order. Once the customer agrees, press **Capture as order**. The usual order popup opens (client, who brought the order, merchandise sold with it, payment) and **Print** creates the order. It has one line, **UV Flatbed Printing**, for the whole job, with the size, the pieces and the band after the name (*20 × 14.8 × 21 cm (301–450 cm² band) · 10/= off each · 5% volume discount*, showing the discounts that were given). The system works the price out again itself, so it always matches the settings, and it refuses a discount from anyone but Finance Manager, General Manager or Admin. It is an ordinary order, with a U-number, counted under the business head **UV Printing** and as *UV Flatbed Printing* in Where your sales come from.

5.4b UV DTF Artwork Order STAFF

Open **UV DTF Artwork Order**. A customer's design printed on UV DTF film and sold **per piece**. It is the same priced list as the DTF Artwork Order (section 5.4): the roll, the **length of film used** (the only film figure tracked), and rows of client, what it is (optional), how many and the price of one — **prices set by the sales person, no recommended price**. UV DTF is applied cold, so there is no heat press and no garment.

- There is **no heat press fee**: UV DTF stickers are applied cold. Blank items such as mugs or phone cases can still be sold from the General Order screen.

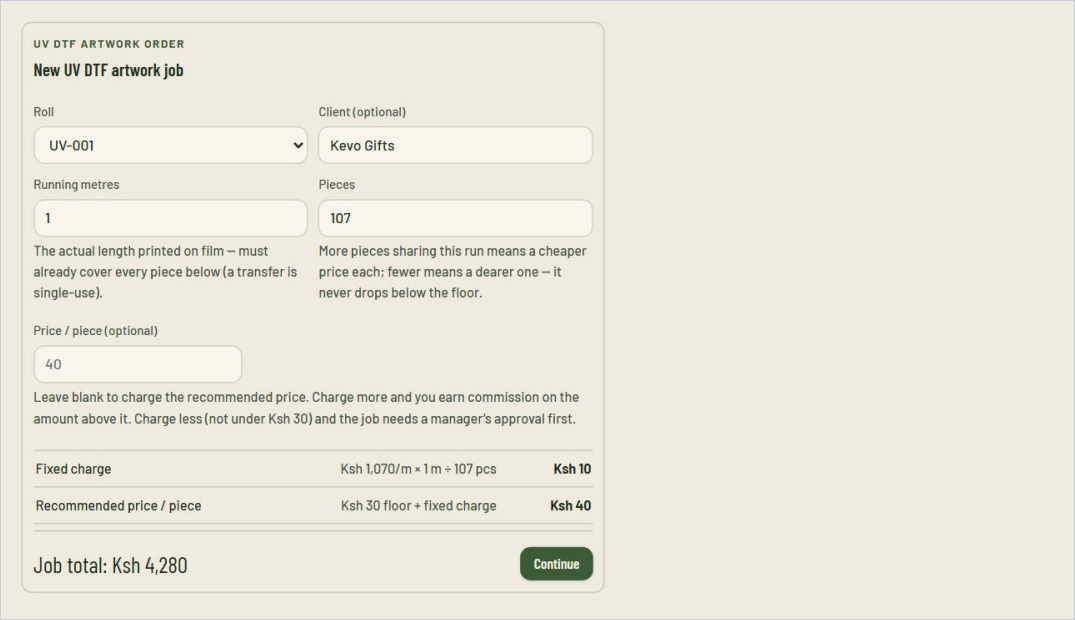

Figure 10 — UV DTF Artwork Order: 107 pieces on one running metre — KES 4,280 for the metre shared by 107 pieces, KES 40 each.

5.5 Embroidery Order STAFF

Embroidery is priced by **stitch count first**, with a quantity price shown alongside for comparison. Open **Embroidery Order**.

1. **The job.** Enter the number of **pieces** (garments). Tick *Client supplies the artwork / design* if they bring it — no design-origination fee is then charged; untick it when you make the design.
2. **Designs — one per placement** (left chest, back…). For each, enter the **design name** and the **stitches**. Two price cards appear: **By stitches** and **By quantity**. The quantity price is always the stitch price less a quantity discount, so it is never higher. **Staff choose either.** Choosing the lower quantity price can send the job to the **approval queue**; a different price per piece can be typed, and anything below the amount shown goes to a manager.
3. Tick **Keep this design for repeat orders** to save it. On the next order press **Repeat order — pick a saved design** to reuse its stitch count; the set-up fee is waived on a repeat, and from 100 pieces.
4. **Garments sold with the job.** Add blank garments from the stock list with **+ Add a garment**; they are separate lines.
5. **What goes on the order** lists the embroidery line, the **digitizing set-up** line and any **design origination** line — each on its own line so they stay visible on the invoice and in reports. The **Compare** table prices the same design by stitches and by quantity at 1, 6, 12, 25, 50 and 100 pieces, with this job highlighted.
6. Take the payment as for any order. Embroidery counts towards monthly sales targets like every other sale.

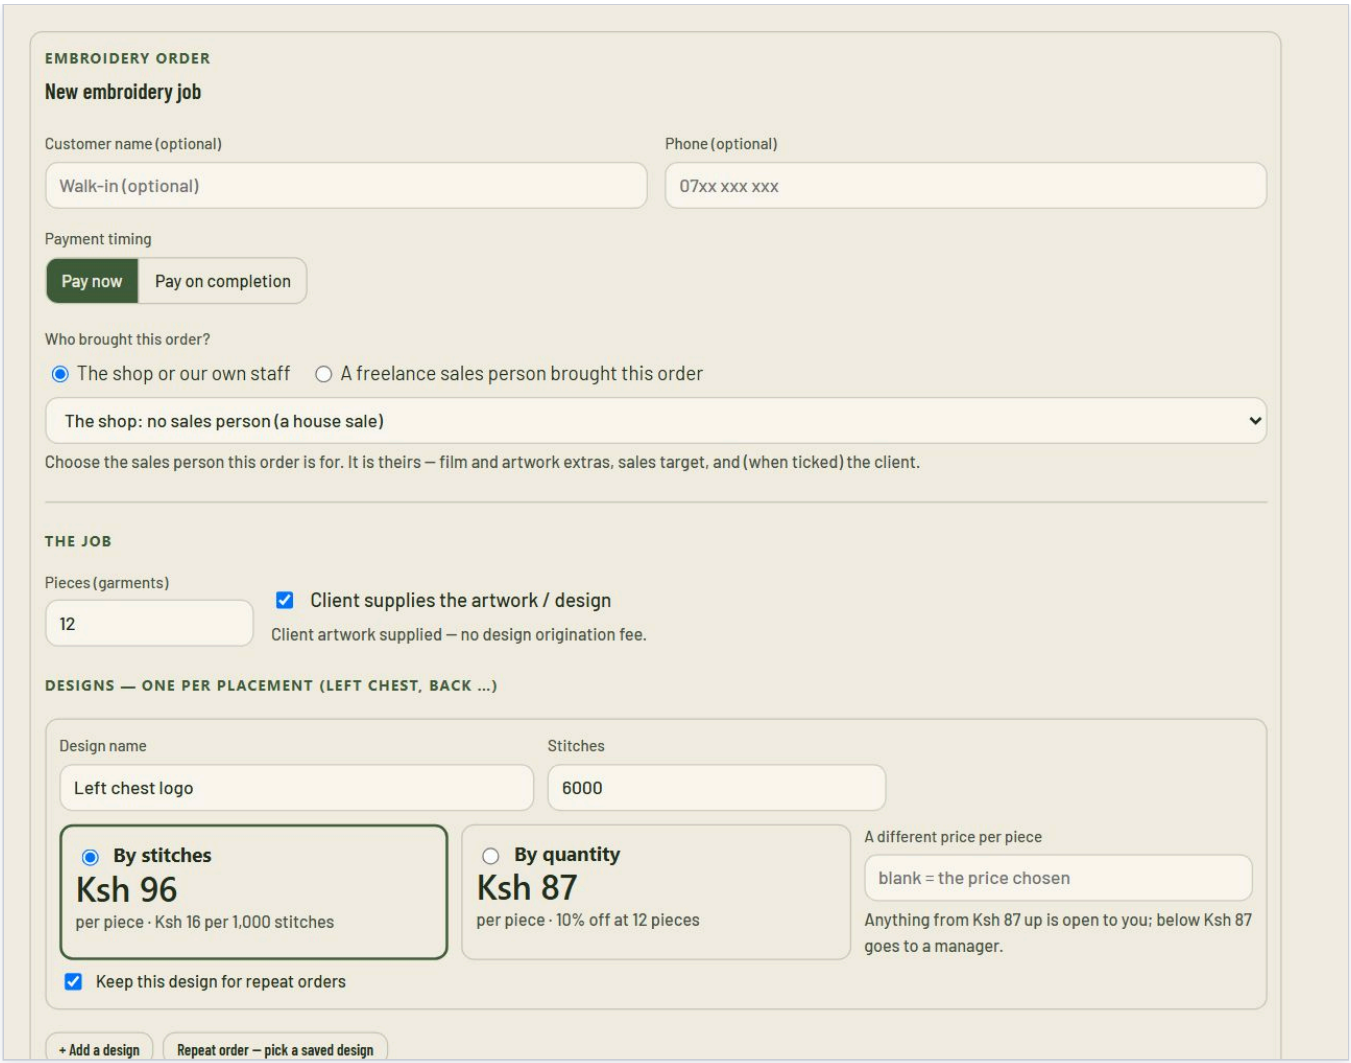

Figure 11 — The job and its designs: pieces, design name, stitches and the two price cards.

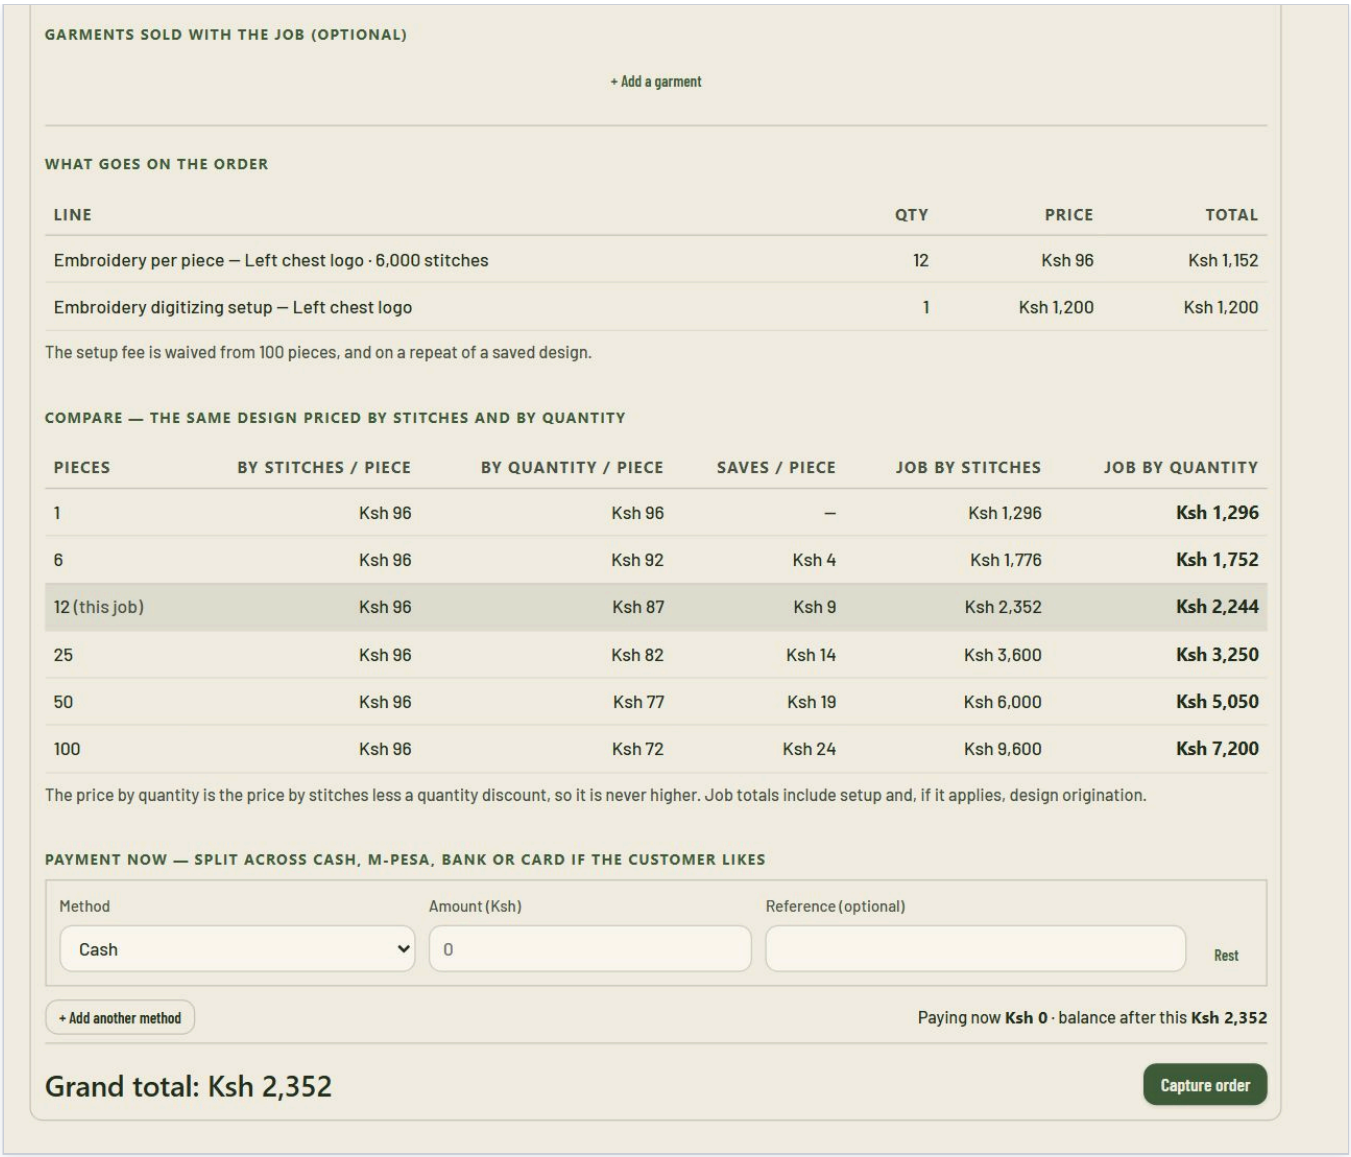

Figure 12 — Further down: what goes on the order, the stitches-versus-quantity comparison, and payment.

> **REPORTS**
> **Reports → Embroidery Profitability** shows revenue less thread and needle consumption and the other costs, so you can see whether stitch-count pricing is earning its keep.

5.6 UV, large format, laser and everything else

These are sold through **General Order** from the service price list: each service has a unit (piece, sqm, per metre), a price and a business head. Set them up once in **Master Data → Service Price List** and every sale lands in the right line of business automatically:

Line of business	How to sell it
UV printing	Services such as UV flatbed prints priced per piece or per sqm; blanks (phone cases, signage boards) as stock items.
Large format	Banners, vinyl, canvas, posters priced per sqm. Work a supplier prints for you is costed under **Sales → Job Costing** (section 5.9).
Laser engraving	Engraving services per piece with the item as a separate stock line.

5.7 Work a supplier makes (outsourced jobs)

There is no *Contracted out* option on the price list, and the General Order does not take a supplier's quote: every service on the price list is sold at its price. Work a supplier makes for you — business cards, signage, eulogies, company profiles, brochures — is **costed in Job Costing** (section 5.9), saved as a quote and, once the client accepts, captured as an order. That order is sent to the supplier and carries a **supplier bill**:

1. On the order, enter the supplier and the amount charged (VAT included). Record the payment: **paid in full**, a **deposit** with the balance owing, or not paid yet.
2. The bill is treated as the job's cost, so its profit is visible. The balance sits in **Accounts Payable** and is paid under **Finance → Expenses**.
3. The job is sent to the supplier from Production, received back, then goes through Quality Control like any other.
4. Track every outsourced job under **Production → Outsourced jobs**.

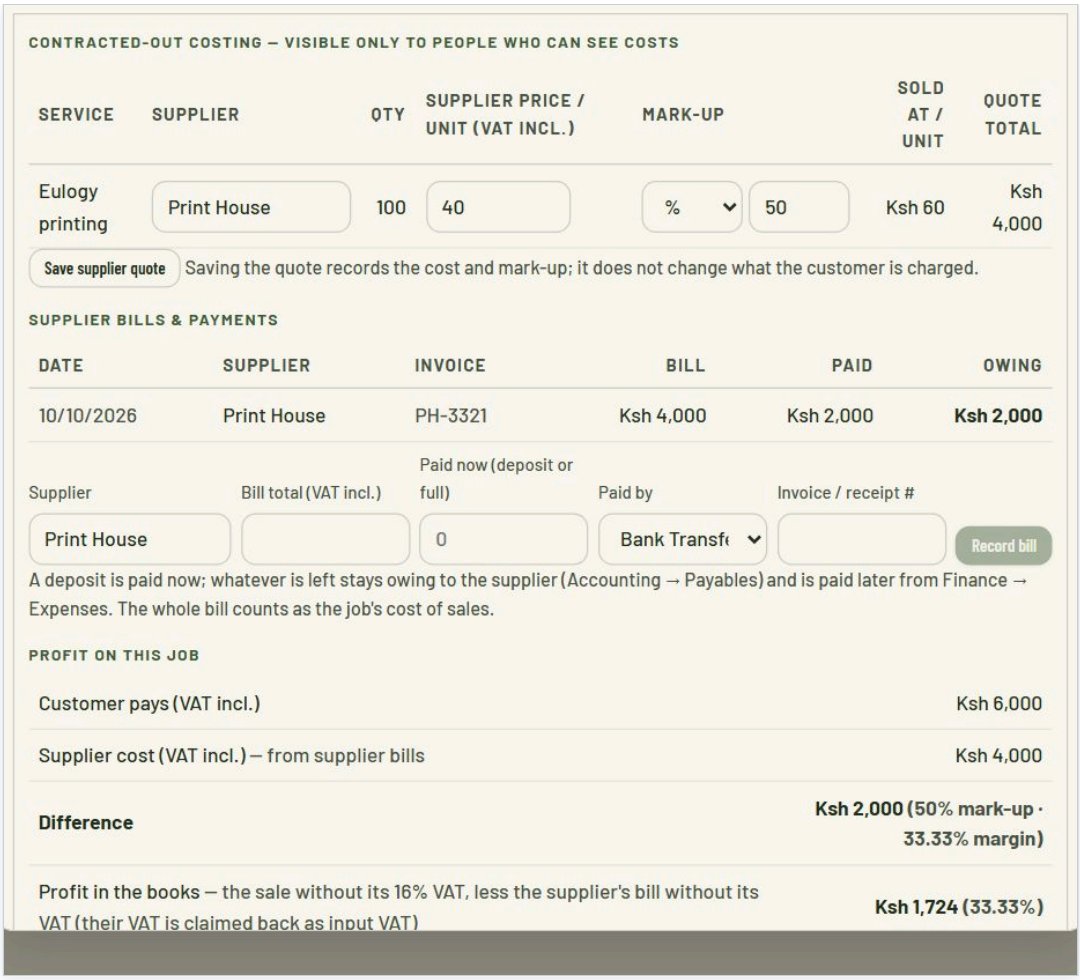

Figure 13 — On an outsourced order (visible only to people who can see supplier costs): the supplier's quote and mark-up on each line, and the supplier bills with what has been paid and what is still owing.

5.8 Freelance sales persons

People outside your staff who bring you work are registered under **Commission → Freelancers** and selected when an order is captured. They are paid weekly commission from their own account, with withholding tax deducted (section 14).

5.9 Job costing (outsourced branding jobs, brochures and eulogies) STAFF · FINANCE

Open **Sales → Job Costing** to work out the price to quote for a job the suppliers will make. It is a calculator: nothing is saved or sent, and it is for three kinds of job — **business cards**, **indoor signage** and **outdoor signage**.

1. **Pick the job.** For business cards choose the **finish** (plain, laminated or frosted) and the number of cards. For signage enter the **quantity**, **width** and **height** in metres.
2. **See what goes into the cost.** The materials and services the job is made of are listed with a tick. **Untick** a line the job does not need (say no laminate) and **tick an optional extra** it does (say delivery).

3. **Quote the price.** The screen shows the **price to quote before VAT**, the **VAT (16%)**, what the **customer pays with VAT** and the price **per card or per sign**. For business cards a table shows the price at 100, 250, 500, 1,000 and 2,000 cards.

4. **Save as quote to print, email or WhatsApp** keeps the costing for the client (see *When the client accepts* below); until you save it, the calculator stores nothing. The quotation itself — to print, email or send on WhatsApp — is made from the saved quote.

Saved quotes and capture: after the steps above, see *When the client accepts* further down.

How the price is worked out. Each material and service is a supplier rate charged **per A3 sheet** (business cards), **per sqm** (signage; the material includes the wastage allowed), **per unit** or **once per job**. Business cards use 21 to an A3 sheet plus 1 spare sheet (both can be changed). The rates add up to the **production cost**, and the price is that cost plus the job's **margin as a markup on cost** — price = cost × (1 + margin %). For example 500 plain cards: 25 A3 sheets × (printing 120 + cutting 40) + design & setup 500 = KES 4,500; with a 40% margin, KES 6,300 before VAT (KES 7,308 with VAT).

> **WHO SEES THE MARGIN**
> Everyone who costs a job sees the **cost lines** — each material and service with its supplier rate and amount — and the **production cost**, as well as the price to quote. The **margin and the profit** are shown only to people who may see costs — **Finance, the General Manager and Admin** (Master Data → Roles & Access) — who can also change the margin for a quote.

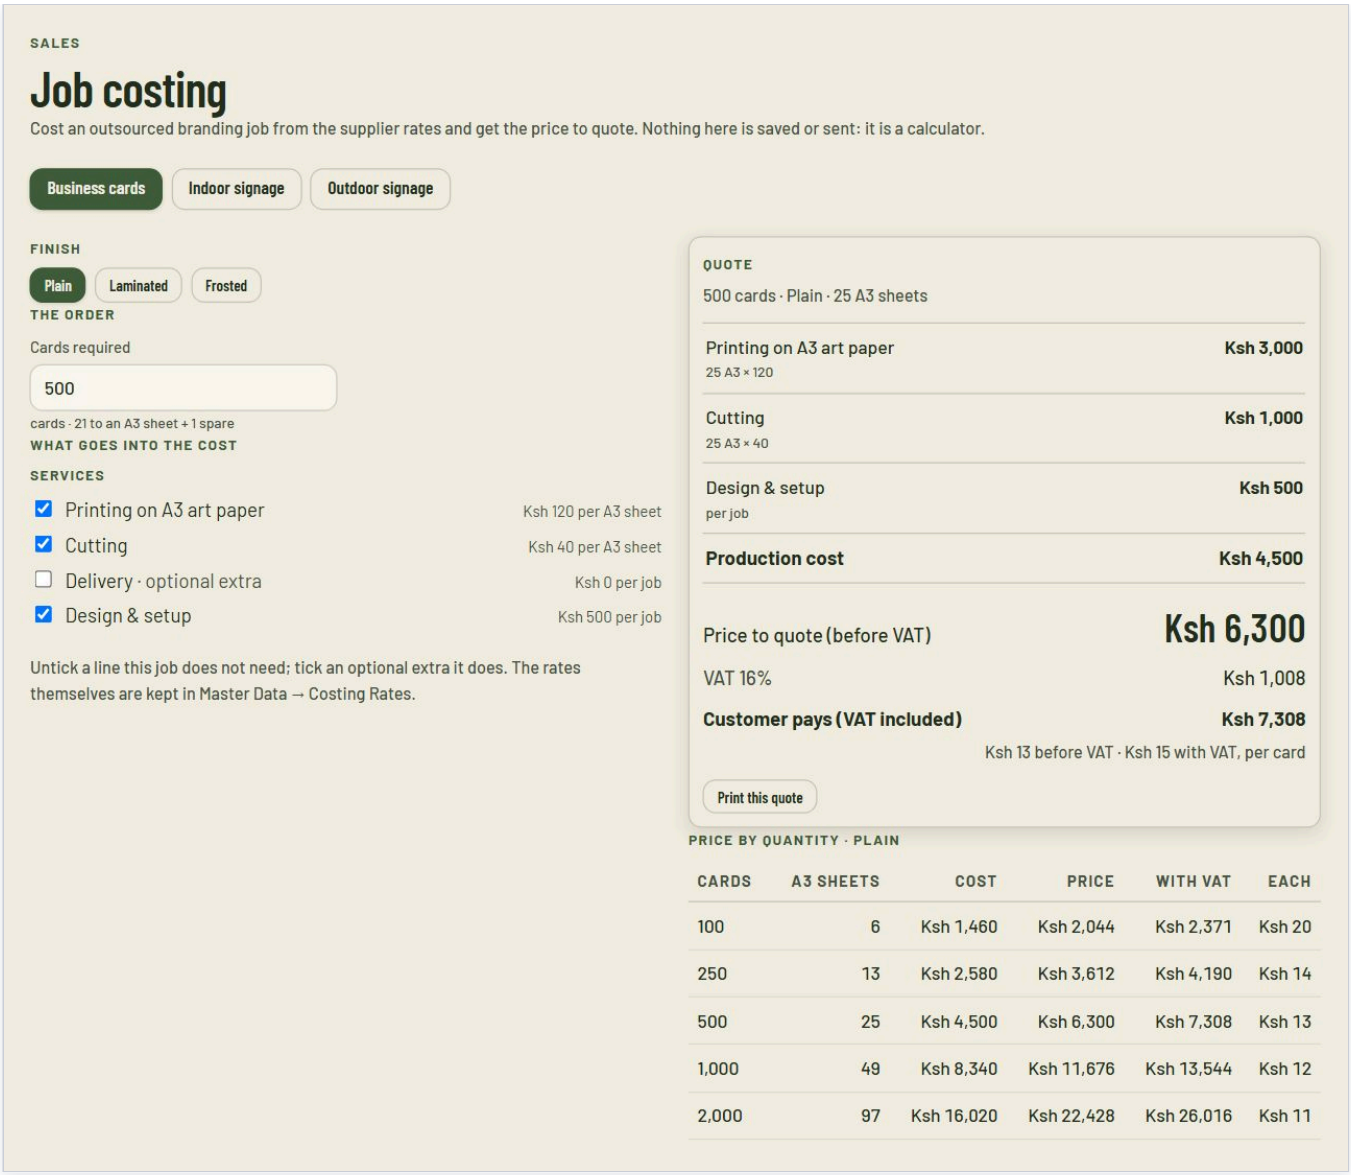

Figure 14 — Sales → Job Costing, as a salesperson sees it: 500 plain business cards — the cost lines, the production cost (KES 4,500) and the price to quote (KES 6,300 before VAT, 7,308 with VAT), without the margin.

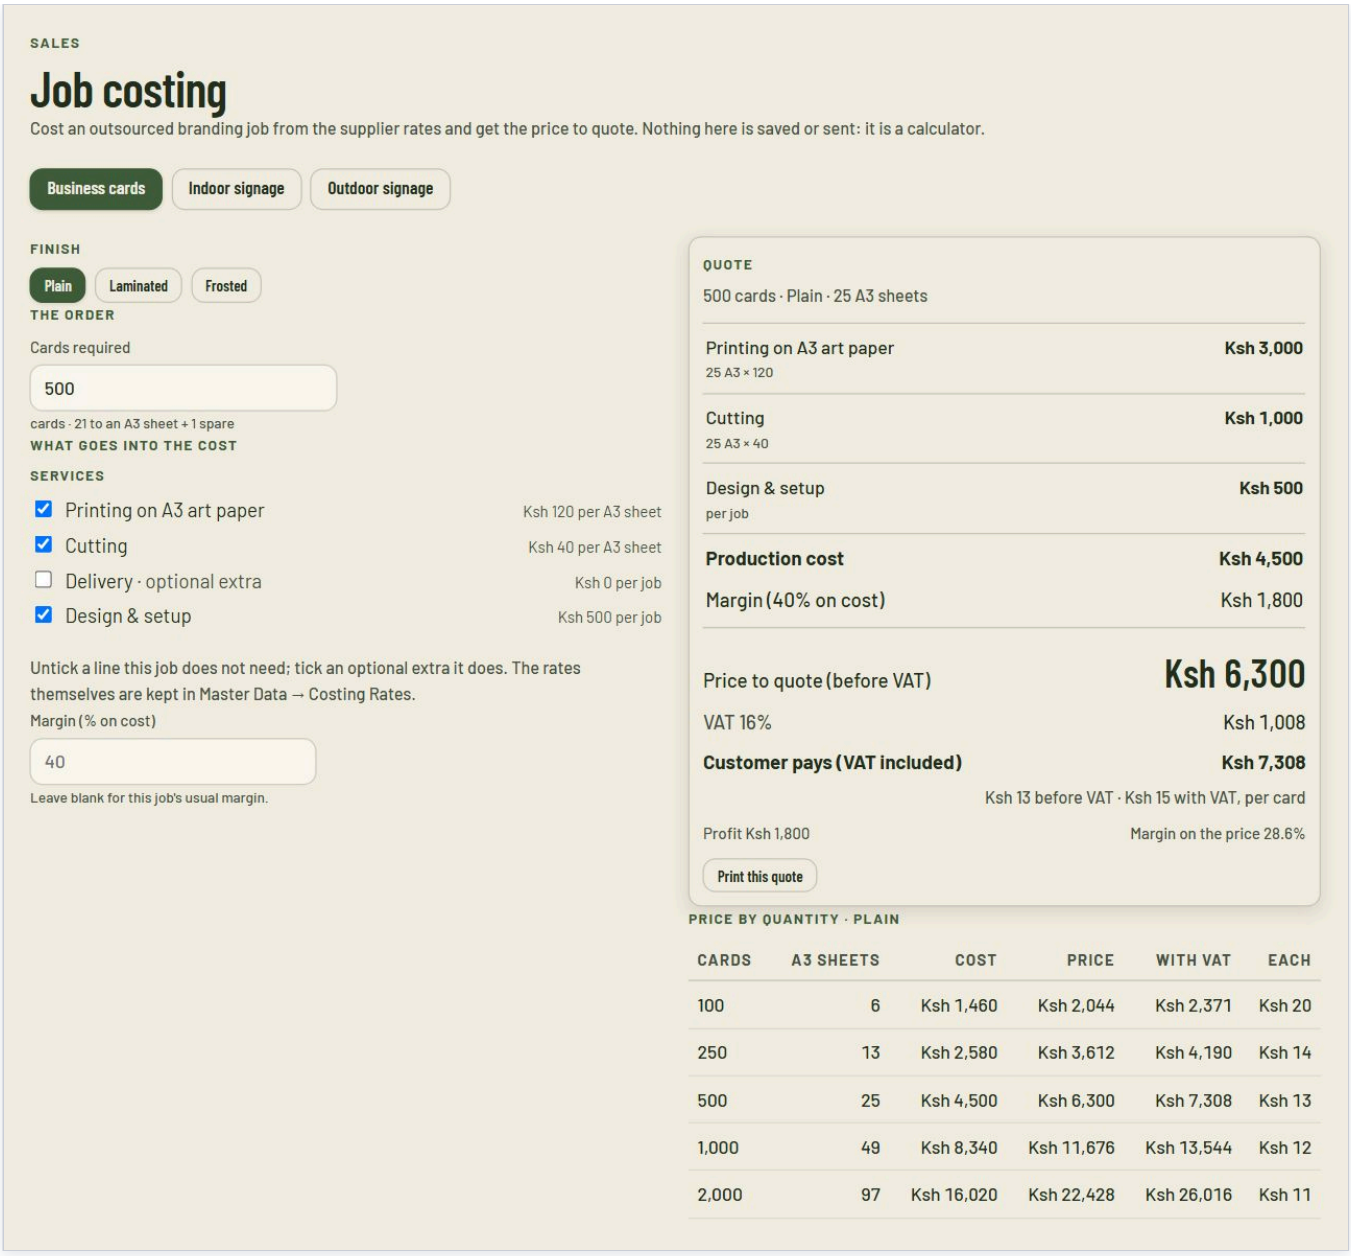

Figure 15 — The same costing as Finance, the General Manager or Admin sees it: the same cost lines and production cost, plus the 40% margin and the profit.

THE QUOTATION: PRINT, EMAIL, WHATSAPP

Open a quote under **Saved quotes** and use the same three buttons as on an invoice or quotation in Finance: ✉ **Email quotation** (type the address; the A4 quotation goes as a PDF attachment), 💬 **WhatsApp quotation** (send it straight from the system when WhatsApp is set up, or share the PDF from your device, or open the customer's chat) and 🖶 **Print quotation (A4)**. It is the house quotation layout, the same as in Finance: your logo and company details, the client, the salesperson, the quote number and date, **valid until**, one line for the job, the total before VAT, the VAT and the total with VAT, and the terms. It shows the **price the client is quoted** — the price agreed with them once that is recorded (and approved, if it was under the lowest margin), otherwise the first quoted price — and never the cost lines or the margin. Send it again after the agreed price changes and it carries the new price. The WhatsApp panel keeps a short history of what was sent, to whom and by whom.

What the client reads. The quotation and the order made from it describe the job the way the client orders it, with none of our production detail: a card job is **1000cards-laminated** (quantity, then plain,

laminated or frosted), not the number of A3 sheets it takes. The Job Costing screens still show the sheets, for you. Quotes saved earlier are brought into the same wording the first time the system starts after this update.

WHEN THE CLIENT ACCEPTS: SAVED QUOTES, THE AGREED PRICE AND CAPTURE

Press **Save as quote** (with the client's name) to keep a costing as a quote, numbered **CQ-1001** and up, valid for 14 days. The cost lines are kept as they were, so a later change to a supplier rate does not change a quote already given. The quotes are under **Sales → Job Costing → Saved quotes**: salespeople see their own, Finance, the General Manager and Admin see them all.

1. **Record the price agreed.** Open the quote and enter what the client has agreed to pay, **VAT included** — the same as the quote, or lower after bargaining. The screen tells you the **lowest price you may agree without approval** (the cost plus the job's *lowest margin*, 30% to start with).

2. **Under that limit, a manager decides.** A price below it is marked *Waiting for approval* and the order cannot be captured until **Finance, the General Manager or Admin** approves it, or rejects it with a reason so a new price can be agreed. They cannot approve a price they quoted themselves. A price below what the job costs us is never accepted.

3. **Capture as order.** Once the price is agreed (and approved if it needed to be), **Capture as order** makes an ordinary order at the **agreed price**, in the salesperson's name: confirm the client's name and phone, tick *I brought this client* if you did, take the payment or choose pay on completion, and the invoice or receipt prints. The job's cost is kept on the order's line so Finance sees its profit and records the supplier's bills against it, and the quote becomes **Ordered**. A quote the client turns down is marked **Lost**, with the reason.

> **WHAT THE SALESPERSON EARNS**
> Nothing special: it is the order's **money received, net of VAT**, counted like any other sale to a client they brought, in the month it is paid — so a price agreed lower means a smaller sale and a lower credit, and only money paid to the company counts. A quote cannot be credited to a freelance sales person.

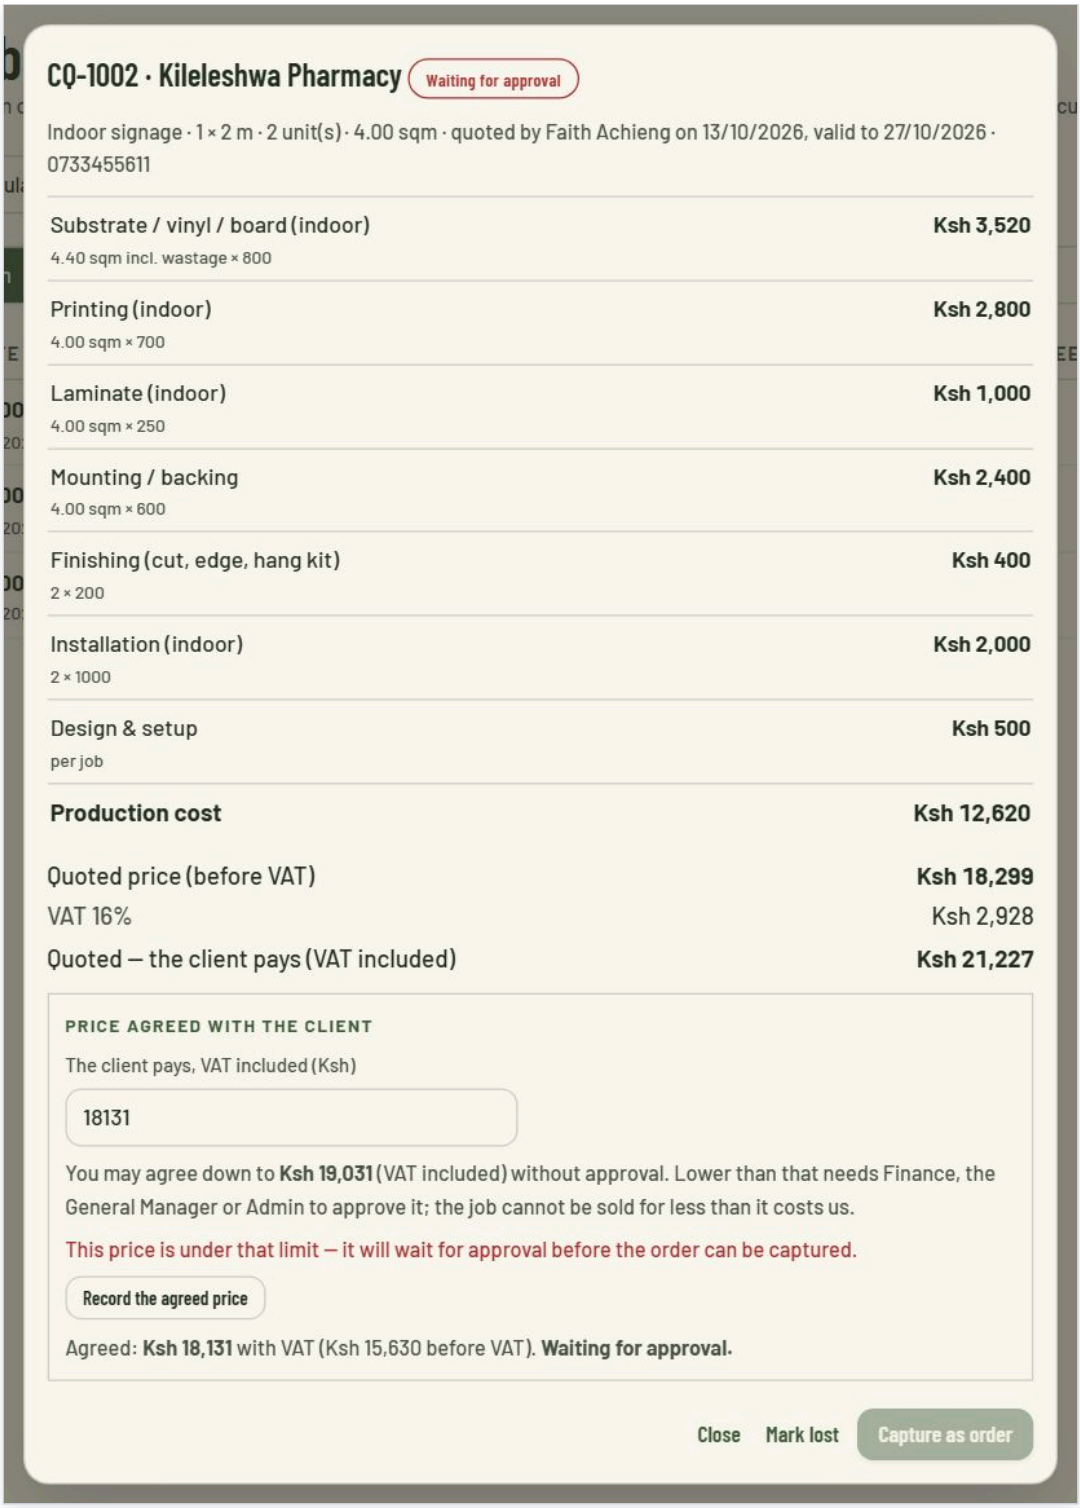

Figure 16 — A quote with the client's price recorded below the limit: the lowest price that needs no approval is shown, and the order cannot be captured until a manager approves it.

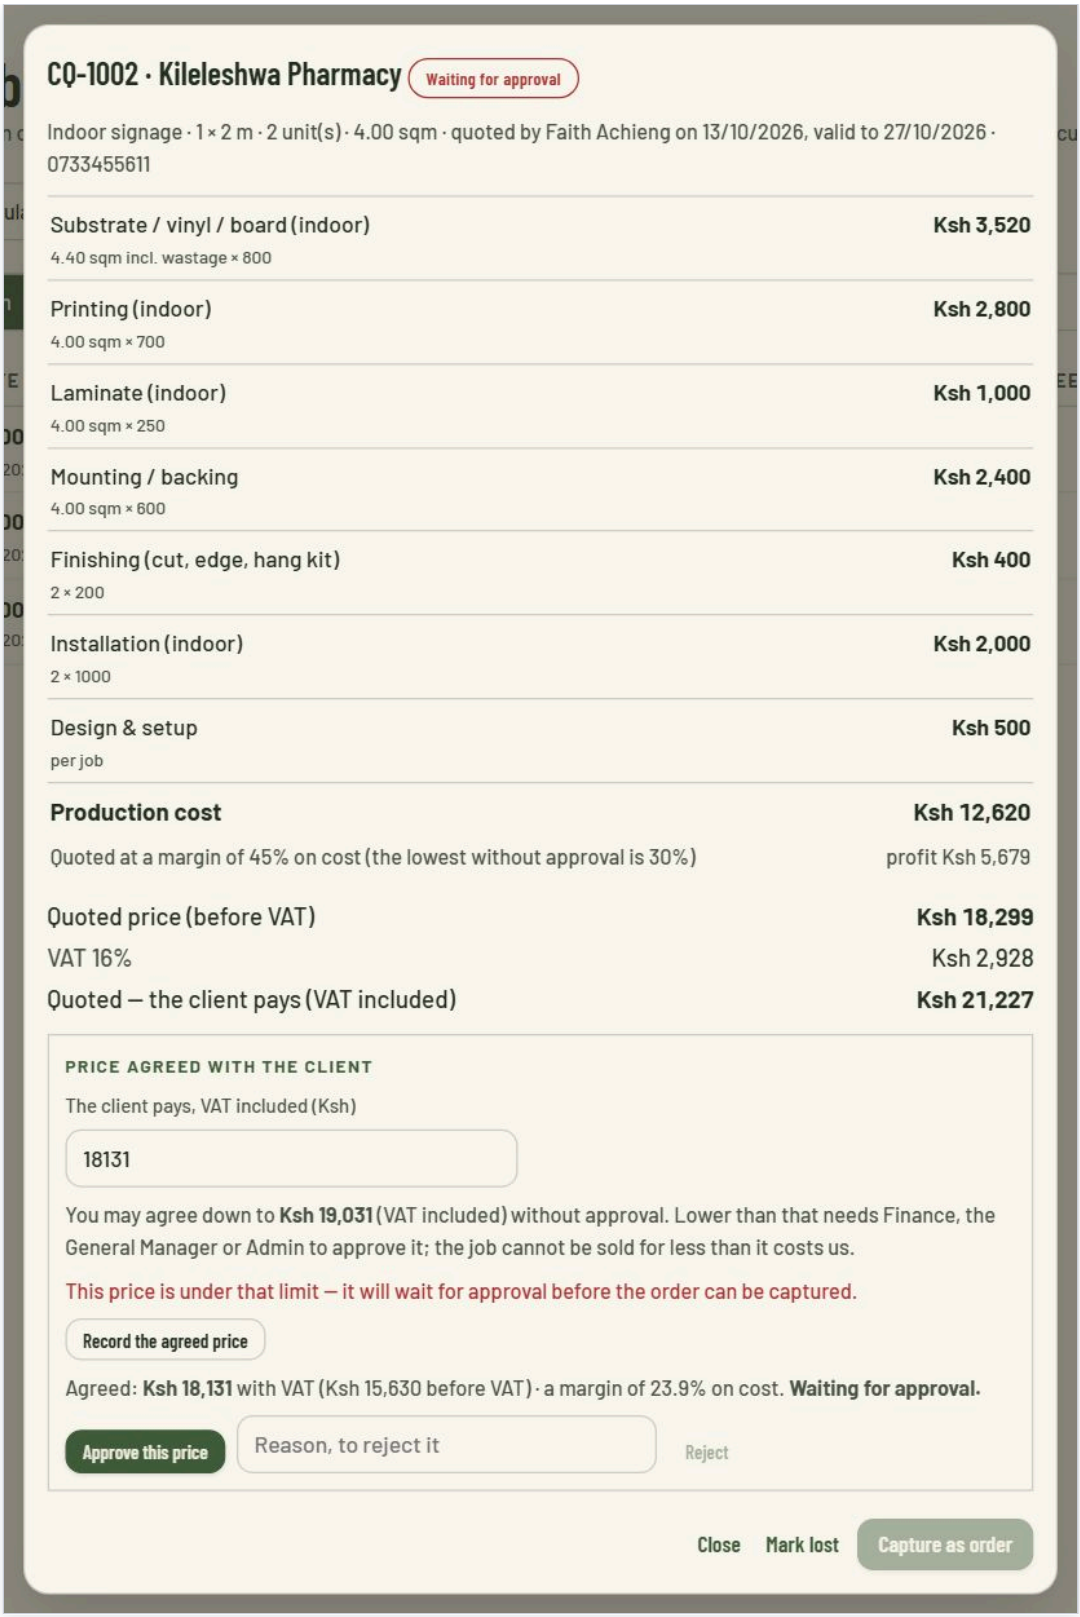

Figure 17 — The same quote as Finance, the General Manager or Admin sees it: the margin, and *Approve this price* or a reason to reject it.

THE RATES: SALES → JOB COSTING → RATES

An Admin keeps the rates on the **Rates** tab of **Sales → Job Costing** (only an Admin sees that tab), in two lists — **Materials** (boards, vinyl, banner, laminate and frosting film, frames) and **Services** (printing, cutting, mounting, finishing, installation, design, transport). Each line has:

- a **name** and what the supplier charges **us** (VAT not included);

- **costed on** — one or more of business cards, indoor signage and outdoor signage;
- **charged** — per A3 sheet, per sqm (with or without wastage), per unit or per job (only the ways that suit the jobs it is used on are offered);
- **in a new costing** — ticked, or an optional extra; for business cards it can be limited to **laminated** or **frosted** cards only.

Edit changes a line (a new supplier price shows in the next costing at once), **untick "On the list"** keeps a line but leaves it out of every costing, and **Delete** removes it. **Move to Materials** (or **Move to Services**) on a line shows it in the other list — for something that was put under the wrong one, such as perspex or ACP. Which list a line is in is only how it is shown: its cost, its basis and what it is costed on do not change, and quotes already saved are untouched. **Add a material** and **Add a service** at the foot of each list add new ones, which then appear in the costing for the jobs you chose. The same screen holds each job's **margin**, its **lowest margin without approval** (how far a quote may be bargained down), the signage **wastage**, and the **cards per A3 sheet** and **spare sheets** for business cards. The figures a new system starts with are samples — replace them with the real supplier rates.

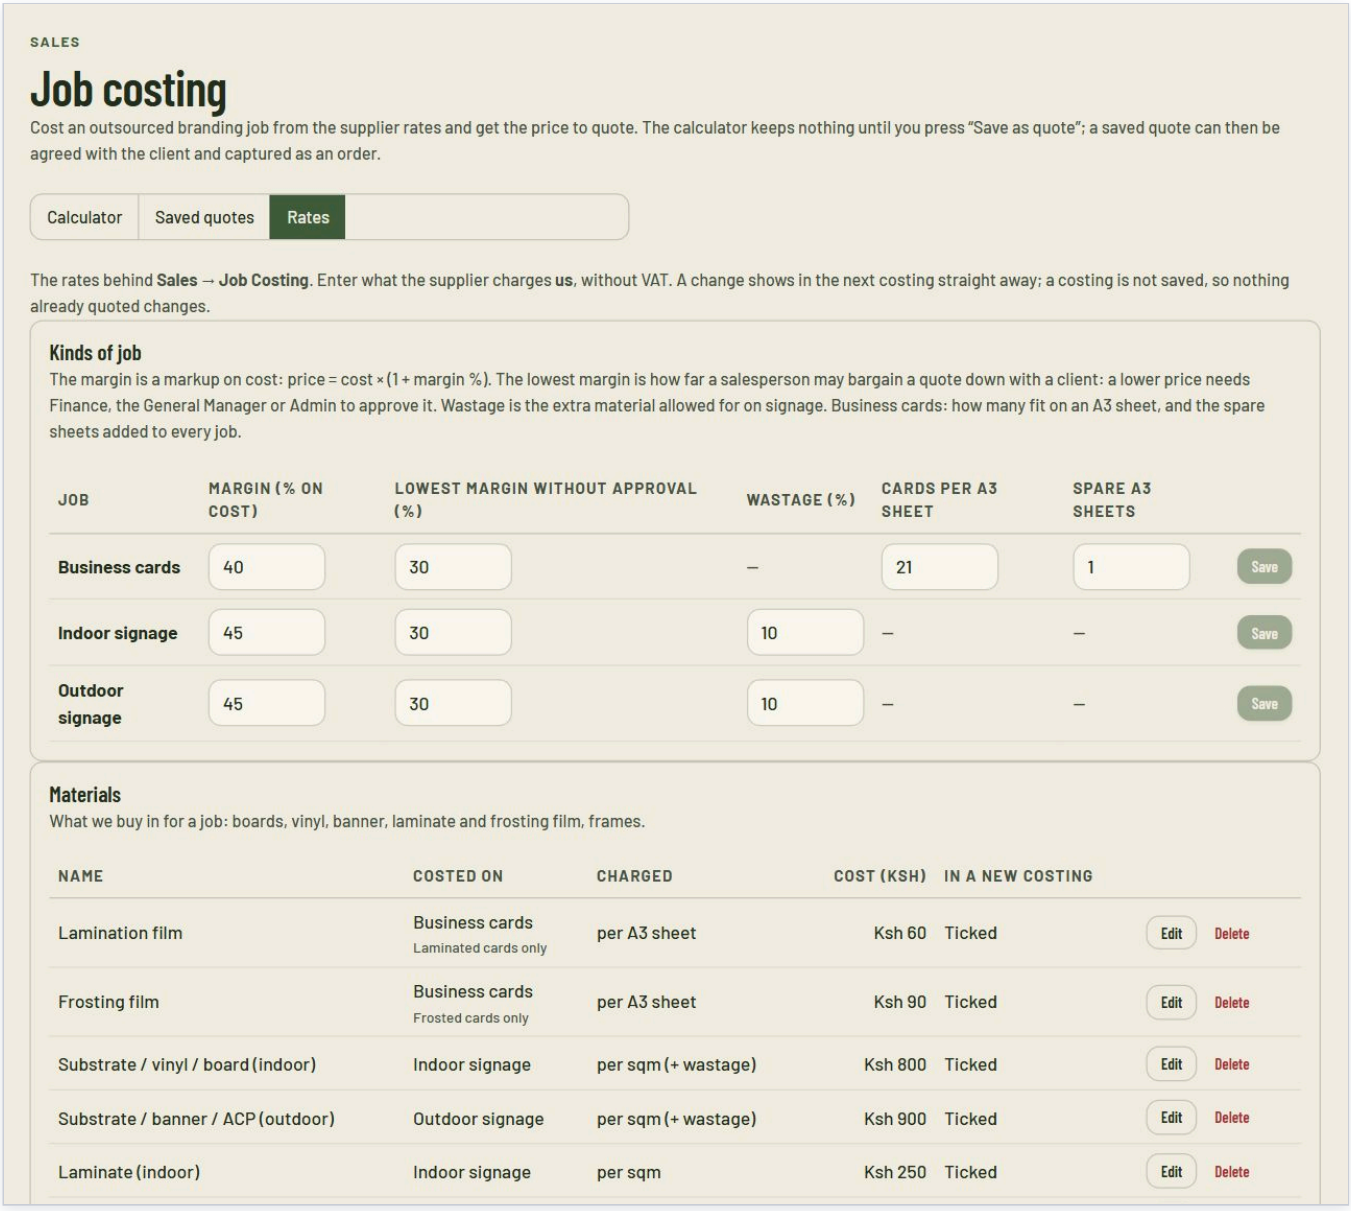

Figure 18 — Sales → Job Costing → Rates: each kind of job's margin, lowest margin without approval, wastage and cards per A3 sheet, then the *Materials* list (and, below it, *Services*), each with the supplier cost, how it is charged and where it is used.

CHECKING SUPPLIER PRICES

On the **Rates** tab of Job Costing (and on *Brochures & eulogies → Rates*) an Admin can press **Supplier price-check sheet (Excel)**. It lists every material, service, paper and fee that Job Costing costs a job from — the card and signage materials and services, the A3 paper for each side, and the stapling, trimming, folding, lamination, design, proofing and delivery fees — with what each is charged on (per A3 sheet, per sqm, per job…), which jobs it is used for, **the rate the system holds today** (VAT excluded), and blank columns for three suppliers' quotes. Take it to the suppliers, then type the new rates into the Rates tabs.

BROCHURES & EULOGIES

Beside *Business cards*, *Indoor signage* and *Outdoor signage* is a fourth tab, **Brochures & eulogies**, for eulogy booklets, company profiles and brochures that a printer makes for you. It has three parts:

- **Calculator.** Choose the **product**. For a **eulogy** you first choose the **booklet size**: **A4** (A3 sheets folded — the usual) or **B5** (the smaller booklet, A4 sheets folded: **four B5 pages to an A4 sheet** printed both sides, eight to an A3 sheet). A B5 booklet is costed from the A3 sheet rate: **two A4 sheets are cut from each A3 sheet**, so the paper is half, and an odd number of A4 sheets uses half an A3 sheet it cannot sell. Stapling, trimming, folding and the job fees are the same as for an A4 booklet, so a copy costs less than half as much on paper but not half as much overall. For a **eulogy** or **company profile**: the **pages** (4, 8, 12 … 32 — four pages to an A3 sheet, always printed both sides), the **inside paper**, and whether to use a **separate cover paper** (it takes the place of one inside sheet), **laminate the cover** and **fold / crease**. For a **brochure**: the size (**A4**, two to an A3 sheet, or **B5**, four), single or double side, the paper, and whether to laminate. Then enter the **copies** or **pieces**. The screen shows the **price per copy / piece with VAT**, the **job total** and the cost lines behind it (sheets, cover, lamination, stapling, trimming, folding, design, proofing and delivery; brochures add the wastage sheets).
- **Price list.** The price of one copy (pages 4–32 at 25, 50, 100, 250 and 500 copies — one table for A4 booklets and one for **B5 booklets**) or one piece (A4 / B5, single / double side at 100 to 5,000 pieces), VAT included, for the paper you choose.
- **Rates** (Admin only). The printer's price for an A3 sheet for each paper (one side, two sides) — **add more papers** with *Add a paper* under the list (name, one-side and two-sided price, then **Save the rates**), and rename one by editing its name. Put the gsm in the name (e.g. *300gsm art card*) and the papers are listed lightest first; a separate cover starts on the heaviest. A paper can be added and renamed but not removed, because saved quotes keep the paper they were costed on; the fees (stapling, trimming, folding and lamination per set or sheet; design, proofing and delivery per job; brochure wastage) the **markup tiers** (by default 50% from 1 copy, 35% from 100, 25% from 500) and the **lowest margin without approval** (30% to start with). The figures that come with the system are placeholders: enter the printer's real quotes before using it.

The price is the cost plus the markup for the quantity, plus VAT. As elsewhere in Job Costing, everyone sees the cost lines and the price; the **markup, the profit and the choice between a markup by quantity and a flat markup** are for Finance, the General Manager and Admin only. Press **Save as quote** with the client's name to keep the costing as a saved quote, numbered **CQ-1001** and up like the signage quotes, valid for 14 days, with its cost lines frozen as they were. It then goes through the same steps as any other saved quote under **Saved quotes** (read the section above): record the **price agreed** with the client (a price below the lowest margin waits for Finance, the General Manager or Admin to approve it; one below cost is

refused), and when the client accepts, **capture it as an order** — one line for the whole job at the agreed price, credited to the salesperson, with the printer's cost kept on the line for Finance. The order goes to the supplier under **Production → Outsourced jobs** like other costed jobs.

Finding orders again

All Orders lists orders with an order date column (the date, and under it the **time the order was captured** in Nairobi time — shown on the list, on the opened order, on Production, and printed on the thermal receipt, the production ticket, the A4 invoice or quotation and the PDF; orders captured before the time was recorded show the date only), search by order number and date, and four summary figures that open to show what is behind them. Staff see their own orders; roles with *View all orders* see everyone's. **So that the screen opens quickly, it lists the last 120 days and every order still open** (not completed, or handed over on credit with a balance), however old; the note at the top says so, and **Show all orders** loads the lot. Searching for an older date or an order number that is not in the recent list switches to all orders by itself. Click any order to open its detail: lines, payments, stage, print, email, WhatsApp, and every action in the sections that follow. **Print the list.** Pick the dates on the calendar (one date for a day, or a second date for a range), choose the business head, status or staff if you like, and press 🖶 **Print list**: the whole list you are looking at — not only the page on screen — prints on A4 with the order, date and time, type, client, staff, status, total and balance, and a total at the bottom.

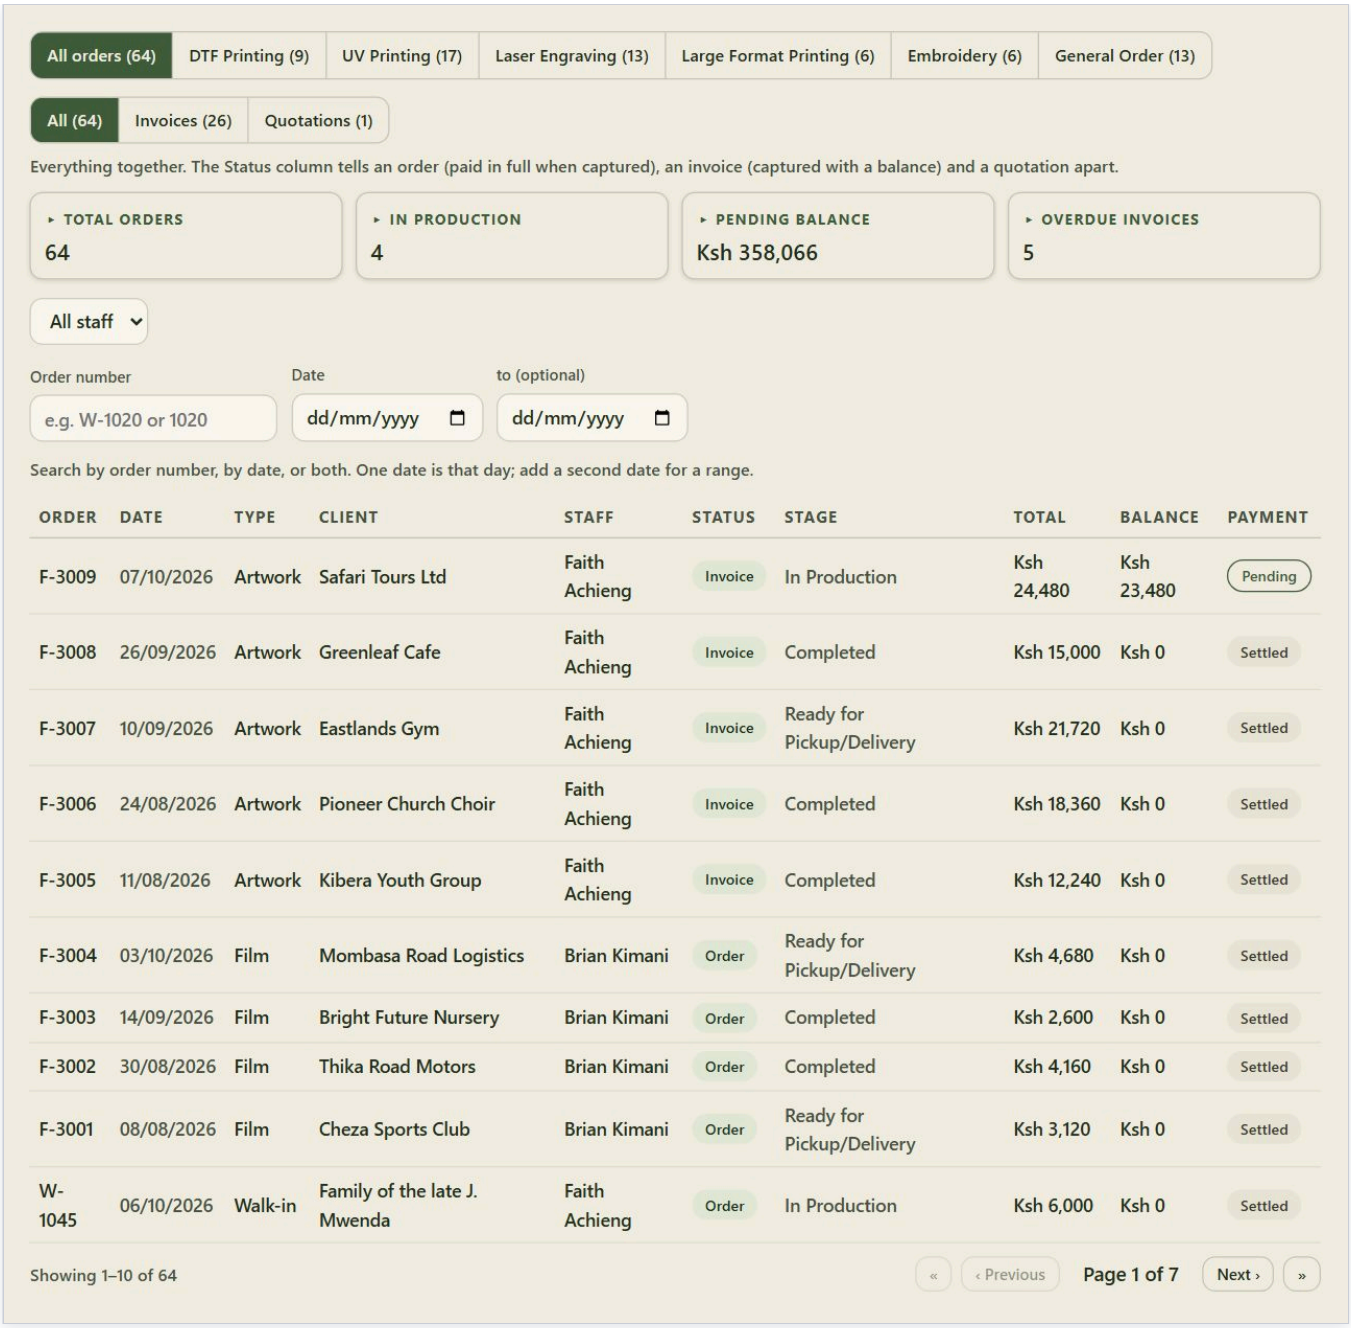

Figure 19 — All Orders: the four summary figures, a tab for each line of business, search by order number and date, and one row per order with its balance and payment status.

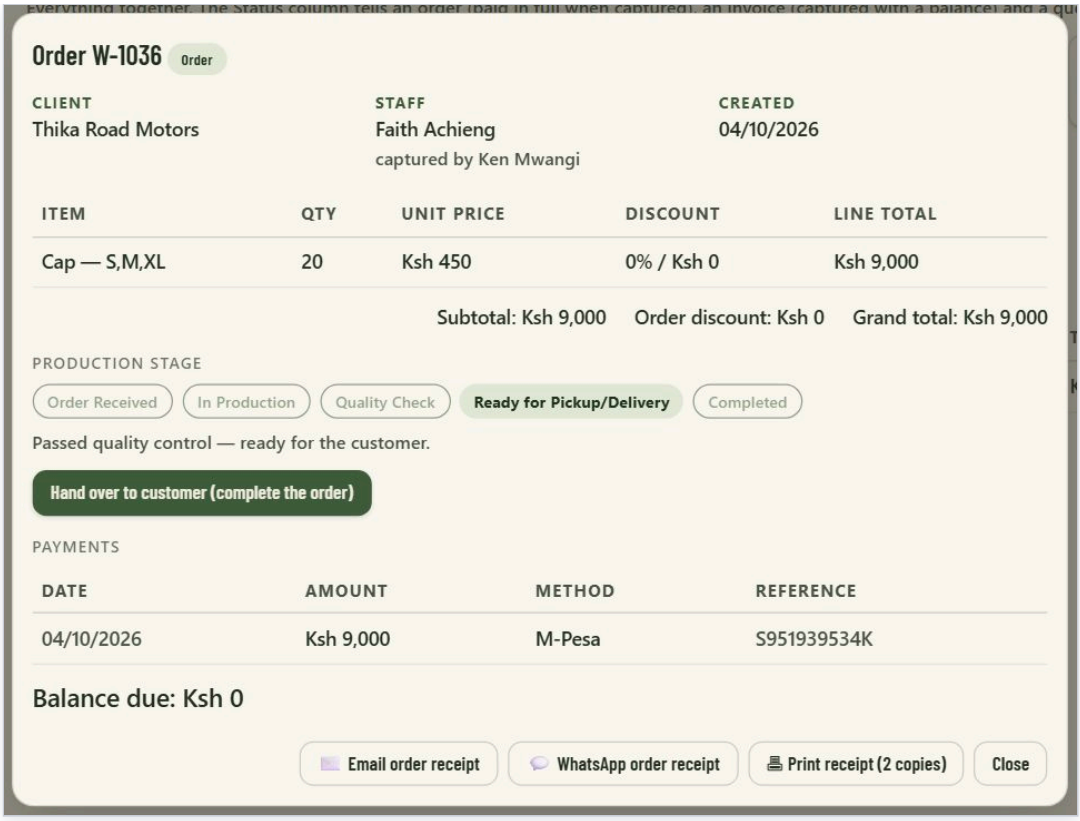

Figure 20 — An order opened: lines, totals, its position on the production ribbon, payments received, and the buttons to email, WhatsApp or print the receipt. This one has passed quality control and is ready to hand over.

6 Taking the money

At capture

The payment panel on the order form accepts any mix of **Cash, M-Pesa, Bank Transfer and Card** (for example half cash, half M-Pesa). The total must not exceed what is owed.

Later, on an order

Open the order and use **Record payment**. Recording a payment needs the *Payments* permission, or being the person who captured that order (the cashier at the till).

- **Deposits** are normal: pay part now and the rest later. The order shows its **balance due**.
- **Payments → Pending Payments** lists every order with a balance; **Paid** lists settled ones. Both filter by date.

M-Pesa STK push

1. On any screen that takes payment (General, DTF film, DTF artwork, UV, embroidery and costing orders) press 📲 **Pay by M-Pesa STK push** under the payment rows: it makes the M-Pesa part for what is still due and shows the **customer's M-Pesa number** (filled in from the client's phone, or type it) and the **Send M-Pesa STK push** button. (Or choose M-Pesa as the method yourself.) The customer sees a PIN request on their phone.
2. The order's payment fills in automatically when the customer approves, with the M-Pesa receipt code.
3. If the customer paid but the confirmation did not arrive, a manager with the *Payments* permission can **confirm by hand** by typing the 10-character code from the M-Pesa SMS. A code that has already been used by another payment is refused.

The STK push button — collecting what is owed

Wherever a customer still owes money there is a 📲 **STK push** button, so a payment can be asked for without choosing a method first: on a row of **All Orders** with a balance, on a row of **Finance → Accounts Receivable**, beside *owes …* in the Production waiting lists, and at the top of the order itself (*Ask the customer to pay by M-Pesa now*, above Record payment — which is also where an order is handed over). It is for people with the *Payments* permission (and Admin).

1. Press **STK push**. The order's own phone number is filled in when there is one; type or correct the **customer's M-Pesa number** and the **amount** (the balance by default, never more than is owed).
2. Press **Send M-Pesa STK push**. The customer gets the prompt and enters their M-Pesa PIN. It goes through **NCBA** when that is switched on (Master Data → NCBA), otherwise through Safaricom.
3. When they pay, the **payment is recorded on the order by itself**, with the M-Pesa receipt code — there is no Record payment step. The balance goes down and the screen says *Paid*.
4. If the prompt fails or is cancelled the screen says so and you can send it again. The same limits apply as for any prompt: a few a minute to one number, and nothing above the M-Pesa limit.

Payments made straight to your Paybill or Till without a prompt are caught too, once the addresses are registered with Safaricom (Master Data → M-Pesa). NCBA Bank customers get the same STK push and payment notifications on their NCBA Paybill (Master Data → NCBA).

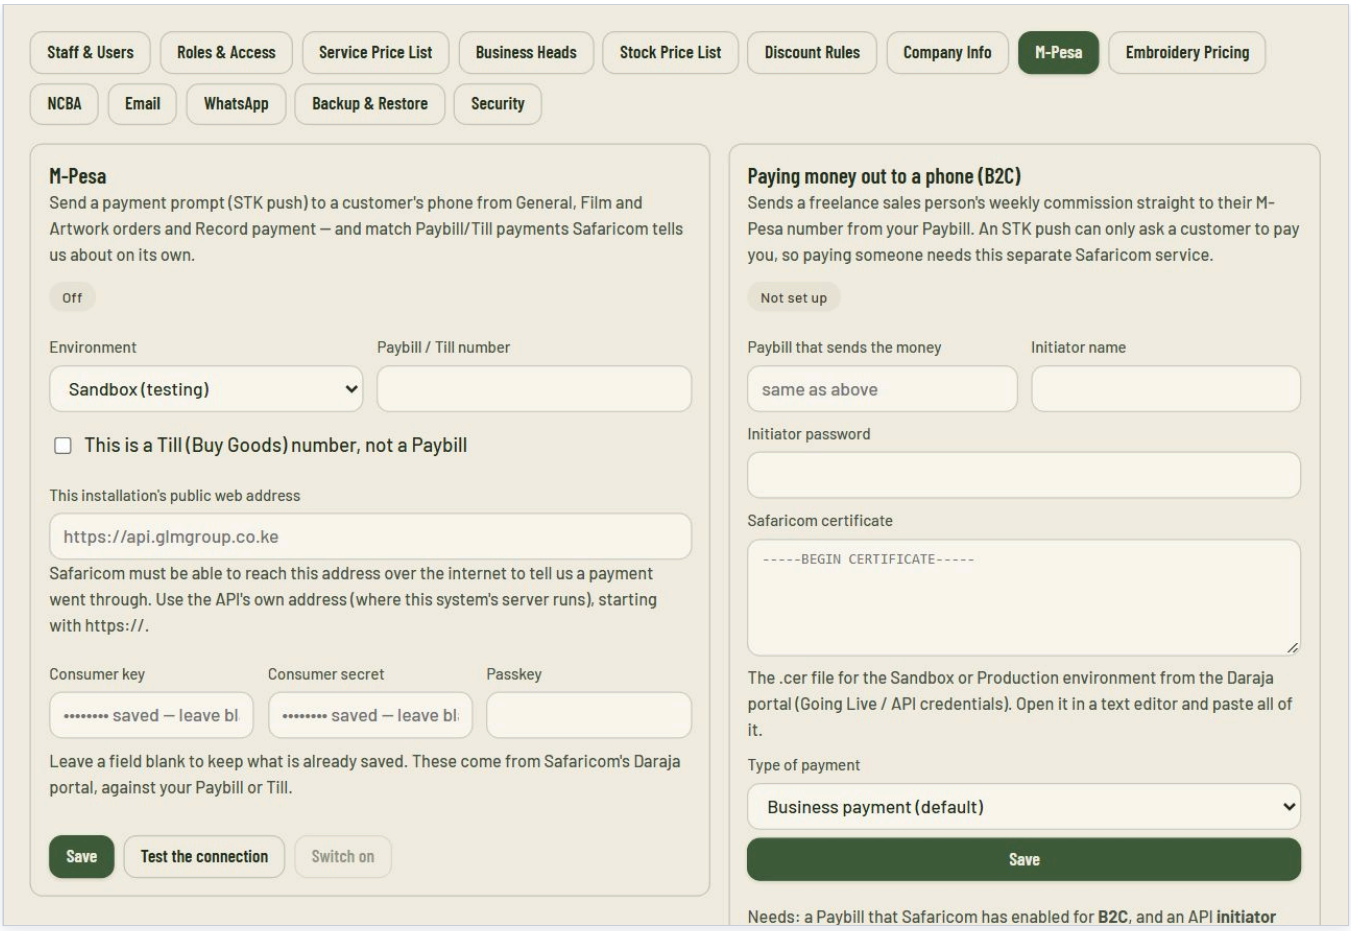

Figure 21 — Master Data → M-Pesa: Paybill or Till, environment, and the keys from Safaricom's Daraja portal. Save, test the connection, then switch on.

M-Pesa matching

Accounting → M-Pesa Matching matches M-Pesa statement lines to orders. Upload the Safaricom statement and the system pairs payments by receipt code, phone number and amount, leaving the exceptions for you. Matching works even if you do not use the live integration.

NCBA money goes straight to the bank account

NCBA settles the Paybill into your bank account **as it receives the money**, so the books put it in the **Bank** account at once — an STK push taken through NCBA, and a payment someone makes straight to the Paybill. There is nothing to settle by hand. (Money that arrives another way — a Safaricom statement you upload, or the Safaricom Paybill/Till — stays in the M-Pesa account.) A payment made straight to the Paybill waits in *Unallocated M-Pesa Receipts* until it is matched to an order, as before.

What NCBA has sent

The payments NCBA has told the system about, and what became of each, are listed in **Accounting → What NCBA Sent**, next to M-Pesa Matching (the same list is under Master Data → NCBA). Each line shows when, the receipt, who paid and the reference, the amount, and the result: **Matched** (the answer to an STK push), **Received** (a payment made straight to the Paybill, to be matched to an order in M-Pesa Matching), **Held** (the signature did not check out, so nothing was booked — check the payment in the

NCBA account and an **Admin** accepts it if it is real) or **Rejected** (the username or password was not yours). People with Accounting or Payments access can read it.

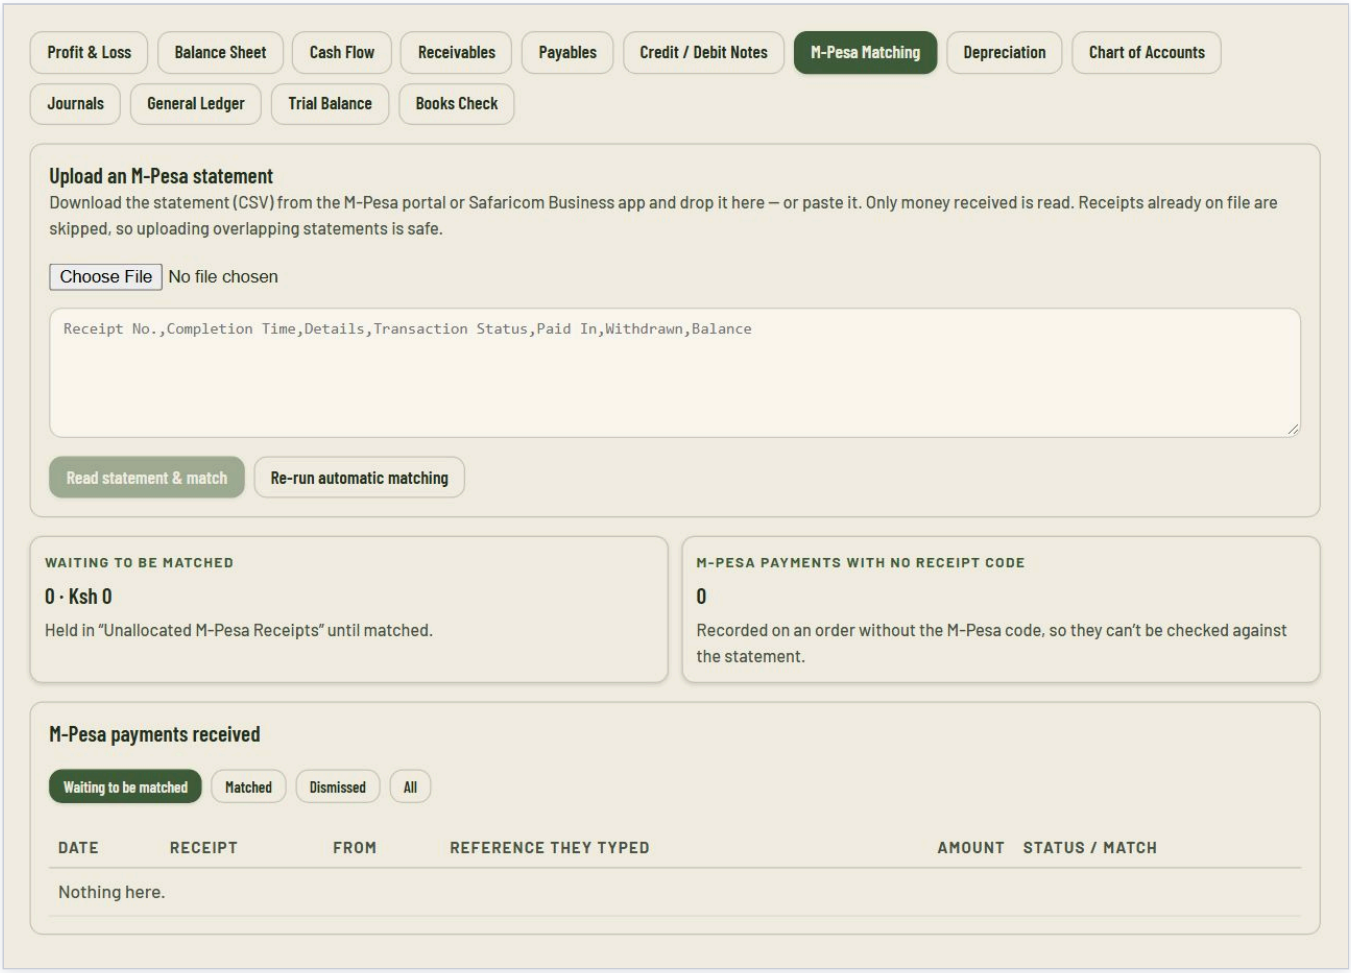

Figure 22 — Accounting → M-Pesa Matching: upload the Safaricom statement and the system pairs payments to orders; the exceptions are left for you.

A payment matched to the wrong order. Under Accounting → M-Pesa Matching, the card **Matched payments — put a wrong match right** lists every receipt already matched to an order (search by receipt code, phone, payer or order number). It is open to the **Front Office** as well as Accounting. For a wrong match: press **Move…**, choose the right order (only orders that still owe at least that amount are offered), give a **reason** and confirm — the payment moves and both orders' balances follow; or press **Take off…** to remove it from the order altogether so the receipt goes back to *Waiting to be matched* (not offered for a payment that came from a push we sent: move that one). Every change is logged on the receipt with who made it and why. This works for M-Pesa and NCBA receipts; the money never leaves the books, only the order it is counted against changes.

Day close — the daily reconciliation FRONT OFFICE · FINANCE · ADMIN

Open **Day close** in the menu (for roles that take payments or work in Finance). It answers three questions for any date: **what came in**, **does the cash in the drawer match**, and **what is still owed**. Use the ◀ ▶ buttons or the date box to move between days; **Print** prints the day sheet.

1. **Look at what was received.** The top boxes show the day's receipts, the cash the drawer should hold, the cash-up result and what customers owe. *Received, by method* lists cash, M-Pesa, bank, card and cheque with the number of payments, and who took them. Press **Show the payments** to see every payment (order, customer, method, M-Pesa or bank reference). The M-Pesa and bank lines are checked against their statements (Accounting → M-Pesa Matching); cash is checked by counting.

2. **Count the drawer.** Under *Cash-up* the system shows the **cash that should be in the drawer**: the float left at the last close, plus the cash received today, minus any cash refunded today. Count the notes and coins and type the total in **Cash counted** — or tick **Count the notes and coins one by one** and enter how many of each, which adds up for you.

3. **Choose the float.** Type how much stays in the drawer for tomorrow in **Float left for tomorrow**. The rest is shown as **To the bank**. The **Difference** shows *Balanced*, *Short* or *Over*: amber up to Ksh 200, red above. Add a note to explain a difference.

4. **Submit.** Press **Submit the cash-up**. It can be counted again and saved again until it is approved.

5. **Approve.** Finance or the Admin presses **Approve the day** — it must be someone other than the person who counted (the Admin may approve any day). An approved day is **locked**: it cannot be submitted again unless the Admin presses **Reopen the day**. If a payment dated that day is added or removed after the close, the sheet warns that the figures have changed since the close.

6. **Check what is still owed.** *Still to be received* shows what customers owed at the start of the day, the sales raised, the money received, and what was owed at the end; below it the invoices are grouped by age — not yet due, 1–7, 8–30, 31–60 and over 60 days overdue — and listed with the most overdue first.

7. **Month.** The **Month** button lists each day with its receipts, cash, the cash counted, the difference and whether it was approved. A past day on which cash came in but no cash-up was done shows **Not closed** in red — those are the days to chase. Click a day to open its sheet.

Day close does not move money in the books; it is the check on the cash. Expected cash counts cash payments and cash refunds only — petty cash is kept on its own desk (Petty Cash). Cash is counted **till by till** (see *Several tills* below).

Who does what. The **Front Office** opens *Day close*, looks at the day, counts the drawer and presses **Submit the cash-up** — it is part of the role as it is set up (anyone who takes payments or works in Finance has it). **Approving** the day is left to **Finance or the Admin**, so that the person who counted is not the one who signs it off; the Front Office sees *Waiting for approval* until they do. The reminder banner for days not closed is shown to the Front Office too.

Several tills. Each cash drawer is a **till**. Everyone takes cash at the **main till** unless the Admin assigns them to another; a payment belongs to the till of the person who took it. When there is more than one till, tabs appear above the day sheet — one for each till and **All tills**. Receipts, expected cash, the float and the cash-up are all per till, and each till is counted and approved on its own; **All tills** shows them side by

side. In the month list a day is *Not closed* if any till took cash and was not counted (the till is named). The Admin adds tills and moves people between them at the bottom of the page, under **Set-up**.

M-Pesa and NCBA tie-out. When NCBA is in use, the day sheet compares what NCBA says it took that day with what is on orders: the total NCBA sent (NCBA settles it into the bank daily, so this is what the bank should show), how much of it is **on orders**, the receipts that are **not on any order yet** (money with no sale against it — match each in Accounting → M-Pesa Matching, or find out who paid) and any **M-Pesa payments recorded on orders that NCBA never sent** (a wrong or invented code, or money paid somewhere else — check them against the statement).

The reminder. Whoever closes the day sees a red banner above every screen when a till took cash on an earlier day (up to a week back) and was not closed — *"Yesterday was not closed"* — with a link to each. People who approve also see how many cash-ups are waiting for approval. The banner disappears when the days are closed.

The evening WhatsApp summary (Admin). Under **Set-up** → **Evening WhatsApp summary** tick *Send the summary every evening*, choose the time (Nairobi; 18:30 to start) and the numbers (separated by commas) and press **Save**. Each evening those numbers receive: what came in (cash and other methods), each till's cash-up result, what customers owe (and how much is overdue), the NCBA tie-out and any day not closed. **Preview today's summary** shows the message and **Send it now** sends it at once. A failed send is tried again every half hour, up to three times; the last result is shown on the page. A message the business starts needs an approved WhatsApp **template**: in WhatsApp Manager create a **Utility** template with **no header** and the body shown on the Set-up screen (*GLM daily summary for {{1}}. Received: {{2}}. Cash: {{3}}. Owed by customers: {{4}}. {{5}}*), and type its name in *Template name*. With no template the summary goes as a plain message, which WhatsApp delivers only to someone who has written to the business number in the last 24 hours (messaging it once a day keeps that open). WhatsApp must be connected first (Master Data → WhatsApp).

Amending or deleting an order after it is captured

An order cannot simply be edited or removed once it is captured: the books, the stock, commission and the customer's paperwork all follow it. So it goes through an approval, and **the person who asked makes the change once it is approved**.

1. **Ask.** Open the order (**All Orders**), find **Amend or delete this order** near the bottom and press **Ask to amend…** or **Ask to delete…**. Give a **reason** and press **Send for approval**. The order's sales person and the Front Office can ask. Only one request can be open on an order at a time.

2. **Approval. Finance or the Admin** sees it in **Approvals** (and by email when mail is set up) and approves it or turns it down with a note. The person who asked cannot approve their own request (the Admin can).

3. **Make the change.** Once approved, the order shows **Approved** and a button: **Amend the order now** opens the order's lines, customer name and phone, and discount to change — add, remove or re-price lines — with the old and new totals side by side; **Delete the order now** asks once more and deletes it. Approval can be used once, and only by the person who asked. The Approvals inbox shows *Continue — amend the order* as a shortcut.

- **Amending:** stock is put back and taken again for the new lines (a quotation holds none); the total can go up or down, but **not below what the customer has already paid** — refund or move the extra payment first. A paid-in-full order whose total rises becomes an invoice with the new balance.
- **Deleting:** not possible while the order has payments — **move** an M-Pesa or NCBA payment to the right order (Matched payments, above) or refund the customer with a credit note first. Stock goes back on the shelf. The order number is not reused.
- **Not changed this way:** film, artwork and embroidery orders (they are tied to the roll or the job), and **completed** orders — raise a credit note instead.
- **The trail.** Each request, who decided it and what the order looked like before and after is kept (and the audit trail records the change), even after an order is deleted.

Receipts and documents

- **Walk-in sales** print on the 80 mm thermal printer, two copies. **Invoices and quotations** print on A4.
- Every document carries your logo, registered and trading names, two phone numbers, website and social links from Company Info.
- On any opened order, **Email order receipt**, **WhatsApp order receipt** and **Print receipt (2 copies)** send or print the document; email and WhatsApp carry it as a **PDF**.

Sending a document on WhatsApp, step by step

Staff — an order, invoice, quotation, receipt or saved costing quote

1. Open the order (**All Orders**) or the saved quote (**Job Costing → Saved quotes**) and press **WhatsApp …** at the bottom. The panel opens with the customer's number from the client record; correct it if needed (*0797 785 033*).
2. Press **Send to the customer now** (shown once an Admin has connected WhatsApp, below). The system makes the PDF, sends it to that number and records who sent it, to which number and whether WhatsApp took it (*WhatsApp history* on the order). If it fails the reason is written in plain words.
3. No connection yet, or you want to use your own WhatsApp: **Share the PDF from this device** (phone, tablet, recent Chrome/Edge — choose WhatsApp, then the customer) or **Save the PDF and open the chat** (desktop browsers: attach the saved file with WhatsApp's paperclip). **Message only** sends the figures as text.

Staff — any other file, with the paperclip

1. In the same panel press **Attach a file**, or open **WhatsApp** in the menu (**Send a document on WhatsApp**) for a file that has no order.
2. Type the customer's number (and name, if you like), choose the file — a **PDF**, a **picture** (JPG, PNG, WebP), a **Word** or **Excel** file or a text file — add a message if you want, and press **Send the file now**. The list below shows what was sent.

3. **What reaches whom:** a PDF reaches any customer (it goes through the approved template). A picture or Word/Excel file is delivered only if the customer wrote to us in the last 24 hours (WhatsApp's rule for messages that are not templates); otherwise the screen says so. Files up to 10 MB, pictures up to 5 MB.

Admin — one-time connection (Master Data → WhatsApp)

1. In Meta: create and verify a **Meta Business portfolio**; add an app with the **WhatsApp** product; add a phone number that is not already on WhatsApp and a payment method (Meta bills per template message).
2. Create a **System User** and a **permanent access token** with *whatsapp_business_messaging* and *whatsapp_business_management*.
3. In WhatsApp Manager create a **Utility** message template with a **Document** header, using the body wording shown on the **Master Data → WhatsApp** screen exactly. Wait until Meta shows it as **Approved**.
4. In the system enter the **Phone number ID**, the **Business Account ID**, the **access token** and the **template name** and language; press **Save and test the connection** (it must show your company's number), then tick **Switch on**.

A business can start a WhatsApp conversation only with an approved template, and customers must have agreed to receive messages. Common errors: *token expired* (make a new token), *template not approved* (wait for Meta), *number still in test mode* (add the recipient in Meta or go live), *24-hour rule* (the customer has not written to us).

---

7 Production and quality control

Production

SUPERVISOR ASSIGNS · STAFF WORK

Open **Production**. It has three tabs: **Orders & jobs**, **Staff productivity** and **Outsourced jobs**. Orders captured show under **Waiting to be assigned**, grouped by line of business.

1. **Assign in-house**: pick the staff member under *Assign to…* and press **Assign**. Use **Reassign to…** later if the person changes.
2. Or choose **or send to a supplier…** for contracted-out work, and **Receive from supplier** when it returns.
3. Under **In production**, a worker presses **Start**, then **Finish** with the units produced. The order is then sent to *Quality Check*; finishing a job does not complete the order.
4. The supervisor sees **productivity** (jobs per person, in a date range) on the same screen.

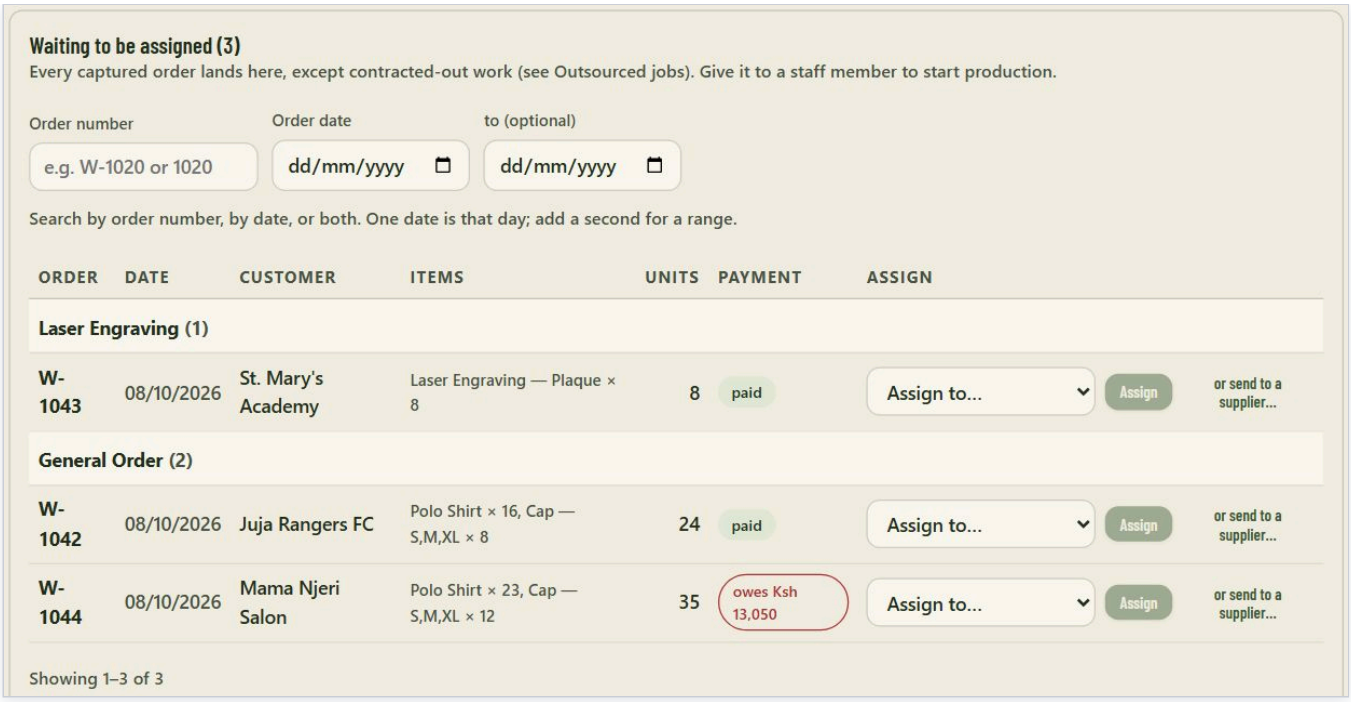

Figure 23 — Production → Orders & jobs: everything captured and waiting for a worker, grouped by line of business, with search by order number or date.

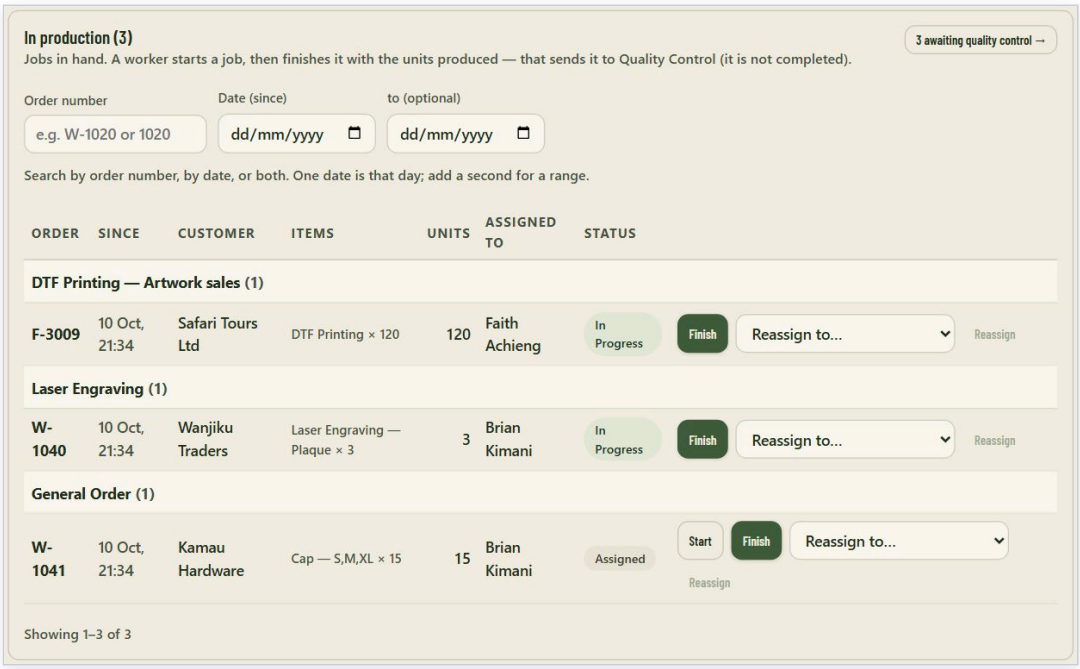

Figure 24 — Below it, In production: Start and Finish buttons, and Reassign.

Artwork jobs waiting for price approval and embroidery jobs awaiting approval are held out of the queue until approved.

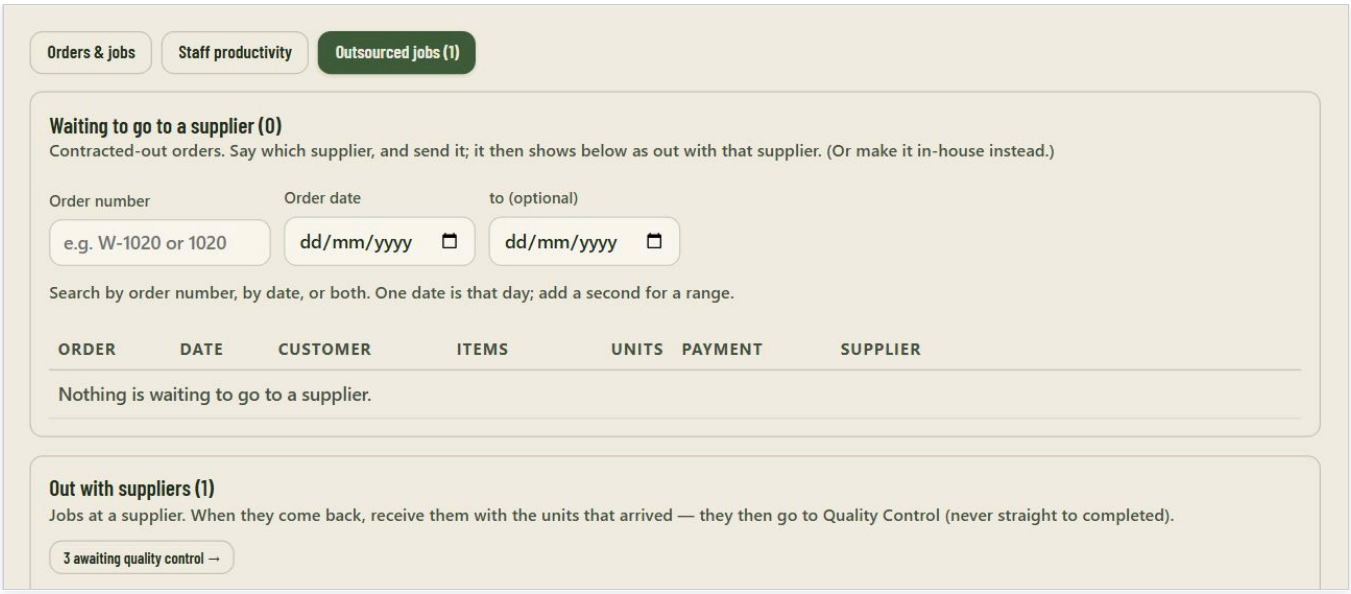

Figure 25 — Production → Outsourced jobs: each contracted-out job, its stage and supplier, what it sold for and what it is expected to cost.

Quality Control SUPERVISOR

Open **Quality Control** and press **Inspect** on a made job.

- **Pass**: the order becomes *Ready for Pickup/Delivery*.
- **Fail**: the order goes back to production as **rework**. The failure is recorded.

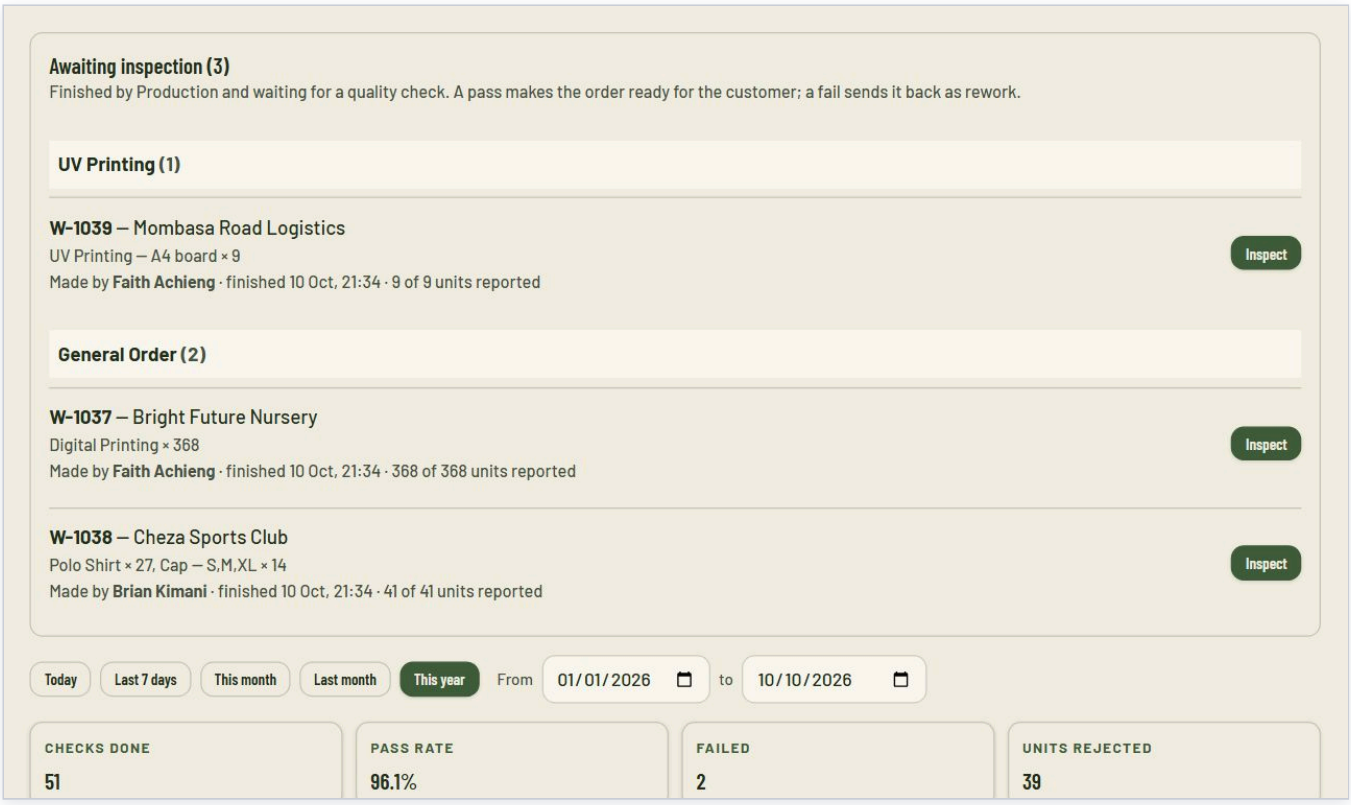

Figure 26 — Quality Control: jobs awaiting inspection at the top, and the inspection history with pass rate, failures and units rejected.

> **THE RULE THAT PROTECTS YOU**
> Production and Quality Control are the only ways an order moves along. Nobody can mark an order completed by hand; it can only be completed by handing it to the customer after it has passed inspection.

8 Handing over, credit and corrections

Correcting the sales person on an order

If an order was captured without the sales person it belongs to, or the wrong one was chosen, open the order: under **Staff** there is **Change sales person** (or **Ask to change sales person**). Choose the right person, say why, and send it.

- **Admin and those who manage commission** change it straight away.
- **The front office, the sales person it is credited to, and whoever keyed the order** ask: the request waits in **Approvals** (under the screen the order came through) until Admin or a commission manager approves it or turns it down. Only one correction can wait on an order at a time, and nobody decides their own request.
- Only people whose role is set up to be given orders can be chosen. The order moves to the new person's orders, and **their commission and sales target follow it**, for the money received on it; **captured by** does not change. A client credited to the same person goes with the order; a client credited to somebody else stays theirs.
- An order paid in a month whose commission has **already been approved** cannot be moved, because the approved figures would no longer match: the month's approval has to be undone first.
- Every correction is kept under **Show sales person history** on the order: who it was, who it became, why, who asked and who decided.

Hand over

When an order is *Ready for Pickup/Delivery*, open it. There are two cases:

Order is paid in full	Press **Hand over to customer (complete the order)**. The order is *Completed*.
A balance is owing	Either take the payment first, then hand over — or press **Hand over on credit…** then **Hand over & convert to invoice**. The customer takes the order, it becomes an **invoice** for the balance, due after the credit terms, and is collected through Accounts Receivable.

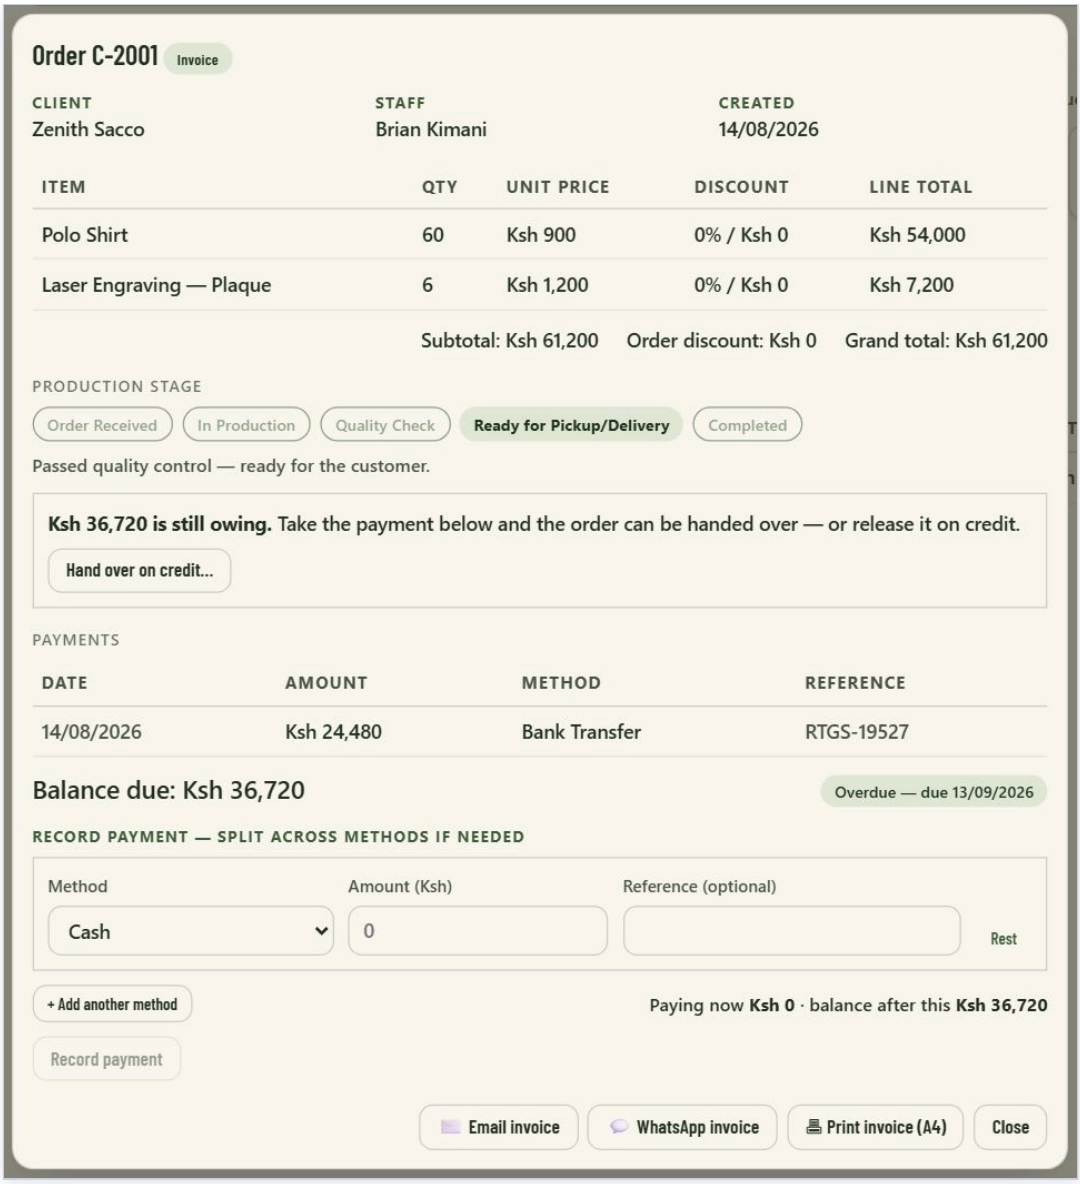

Figure 27 — A finished order with a balance still owing (here on a corporate invoice): take the payment, or hand it over on credit, which keeps it in Accounts Receivable.

Credit notes and debit notes

Accounting → Credit / Debit Notes.

- **Credit note**: takes part of a sale (and its VAT) back from a customer — a return, a wrong item or a price correction. It is **itemised**, and if goods come back to stock you can restock them.
- **Debit note**: charges a customer more after the sale — a change request or an extra.
- **Supplier debit notes** reduce what you owe a supplier and your input VAT.

An invoice is never edited after the fact; corrections are always visible notes, so the paper trail is complete.

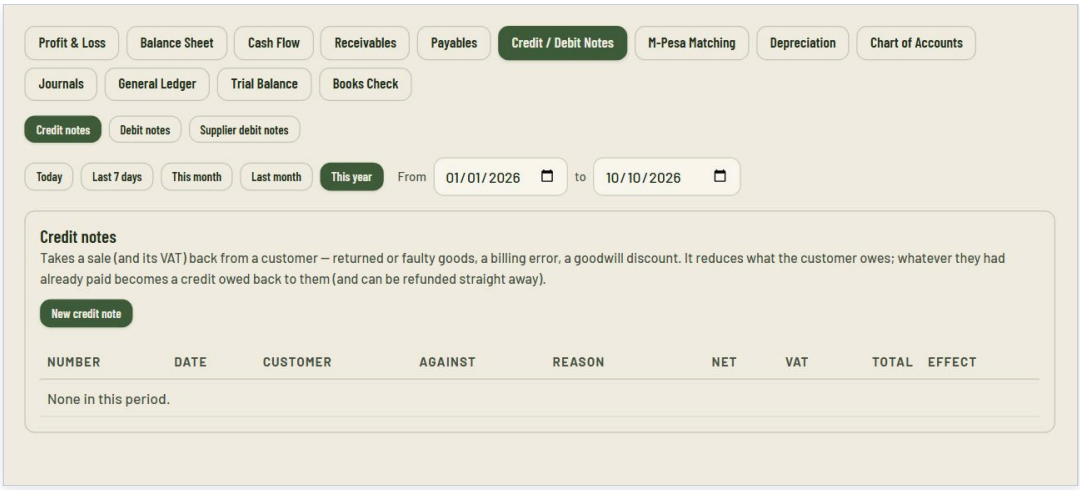

Figure 28 — Accounting → Credit / Debit Notes.

9 Stock and purchasing

Stock goes up only when goods physically arrive, and down when they are sold or consumed. Reorder alerts tell you what to buy before you run out.

Tab (Stock)	Use it to
Stock Levels	See every item with its price, quantity on hand and reorder level. Items at or below their reorder level are flagged; the same flag appears in Master Data → Stock Price List.
Purchases Requisition	Ask for stock. A requisition has a reference (REQ-0001…) and any number of lines, each with an optional expected unit price (blank = the last price paid).
Purchases Approval	A manager approves or rejects a requisition. A requester cannot approve their own — except the **Admin** (see below).
Purchases	Raise a **purchase order** (PO-0001…) from an approved requisition, with the real unit price from the supplier's invoice. The order is *held*: stock does not rise yet. The **store manager receives it**, entering the quantity that actually arrived on each line, and stock goes up by what was received. Whoever captured the purchase cannot receive it — except the **Admin**, who may receive their own (see below).
Purchases Reconciliation	Compares, per requisition, what was asked for, bought and received: short deliveries, price variance and quantity variance, each shown separately and adding up to the total.
Stock Take	Count what is on the shelf. The system corrects the quantity at once and keeps the system figure, the counted figure and the variance as an audit record.
China Import Costing	A landed-cost calculator for goods imported from China, so the true cost per unit — not just the supplier price — is known before you set a selling price.

THE ADMIN AND PURCHASING

In a business with few people the same person may have to do every step. The **Admin** can therefore **raise a requisition, approve it, capture the purchase, and receive (or reject) it into the store** without a second person. Everyone else keeps the two-person rule. The Admin's own pending requisition shows in their Approvals inbox, and everything they do is on the audit log under their name.

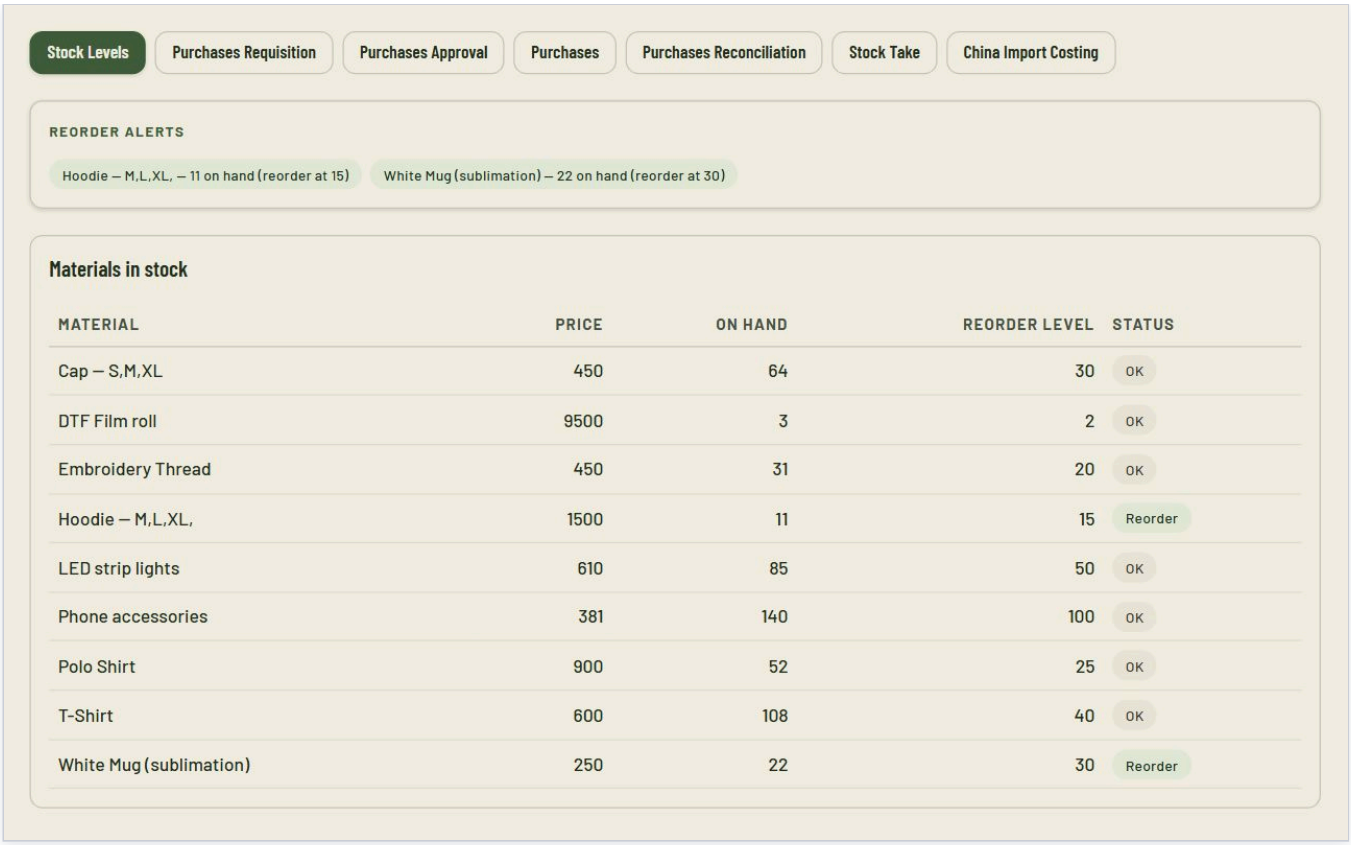

Figure 29 — Stock → Stock Levels: every item with its price, quantity on hand and reorder level; low stock is flagged.

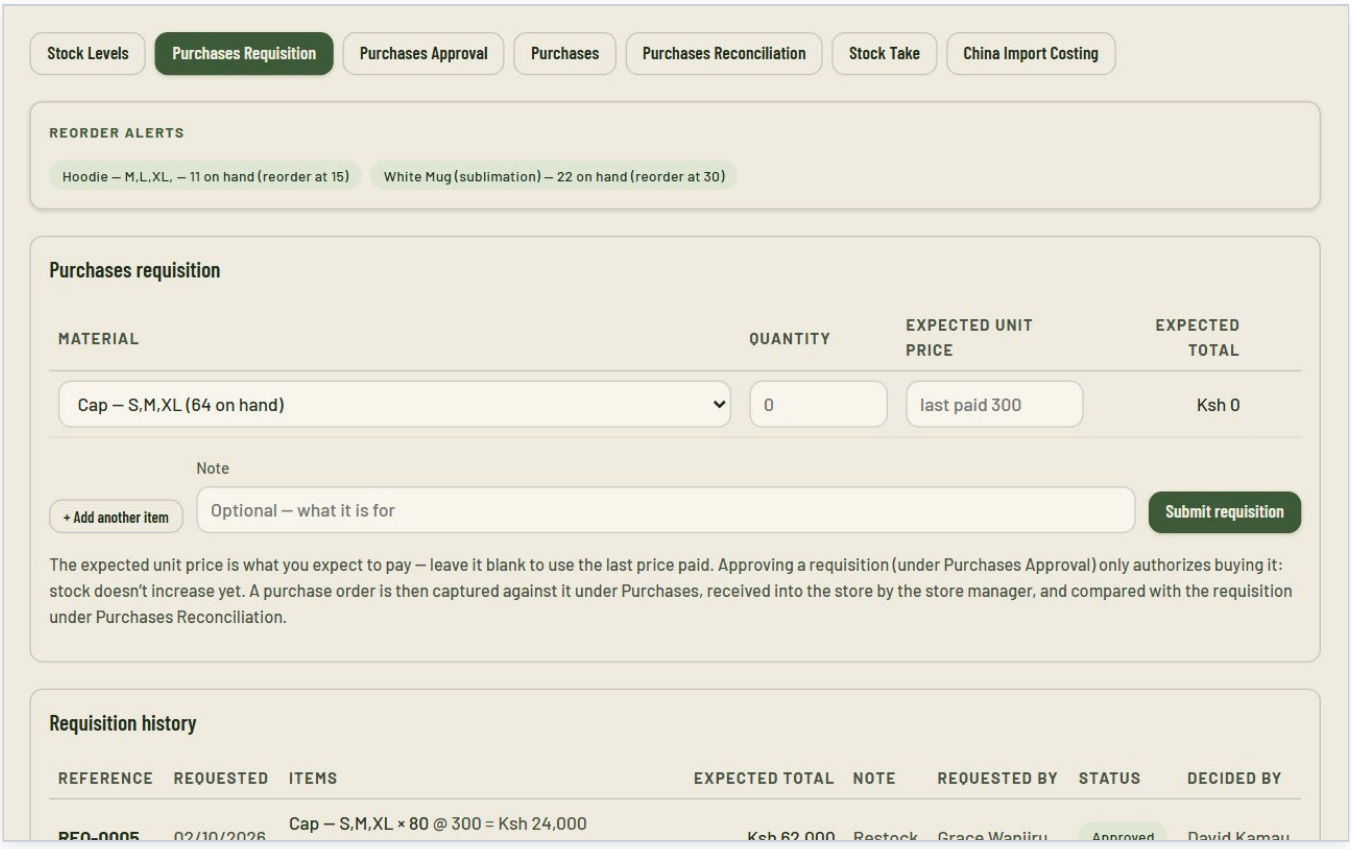

Figure 30 — Stock → Purchases Requisition: raise a requisition with lines, quantities and expected unit prices.

Every purchase line and expense can be tagged to a **business head**, so Reports can show the cost of each line of business.

10 The DTF roll tracker

For DTF shops, film is the biggest cost and wastage is the biggest leak. The **DTF** module follows each roll from the day it is installed to the day it is closed.

Tab	What it does
Dashboard	Roll-by-roll results: revenue, cost, profit, film used and wasted, and a table of **what discounts cost** — revenue at full price against revenue actually received.
Rolls	**Install** a new roll with its length and the real film, ink and powder costs. **Close** it (with confirmation) to work out wastage; **Terminate** it if it has physically run out while the system still shows a balance; **reopen** if closed by mistake.
Film Sales	Printed film sold by the metre, with price, amount paid and who captured it.
Artwork Jobs	Customer artwork priced per piece, the recommended price, the price charged and its heat press fee.
Price Approvals	Lower-than-recommended artwork prices waiting for a manager, with the discount and the roll's profit with and without it. Below them is the **report of approved price changes**: one row for each, with the **date requested**, the order, roll, client and pieces, the **suggested price** (the recommended price per piece), the **approved price** per piece, how far below the suggestion it is and the discount, who asked, who approved and the date approved, with the total given away. Filter it by the dates requested, **Download (CSV)** for a spreadsheet, or **Print**. Rejected requests are listed under it with the reason. DTF and UV DTF each have their own.
Artwork price	*No longer used for new prints — they are priced by the sales person; kept for the history of earlier ones.* The **price per running metre of artwork**, on its own so it can be changed whenever it should move: type the new price and press **Save price**. It applies to new orders from that moment (jobs already recorded keep the price they were saved with). Below it, *Try it on a run of film* shows what a length with so many artworks comes to, and *Recent changes* lists who set what and when. Each product (DTF, UV DTF) has its own price. Managers can also change it straight from the artwork order screen: *Price per running metre: Ksh … — change*.
Setup	The film price band, the **charge per running metre** for artwork (shared between the artworks on the length) and a lowest price per artwork (30 to start; 0 for none), the small-share rule (an artwork's share of the film below 30 is recommended at 40 for DTF; below 40 at 40 for UV DTF), the wastage tolerance (5% to start; set your own).

> **WHO SEES WHAT**
> People who only record sales and jobs see Film Sales and Artwork Jobs; roll costs are never sent to them. People with *DTF: rolls, costs & profit* see the rest. Prices stored with each sale are fixed at the time, so changing Setup never rewrites history.

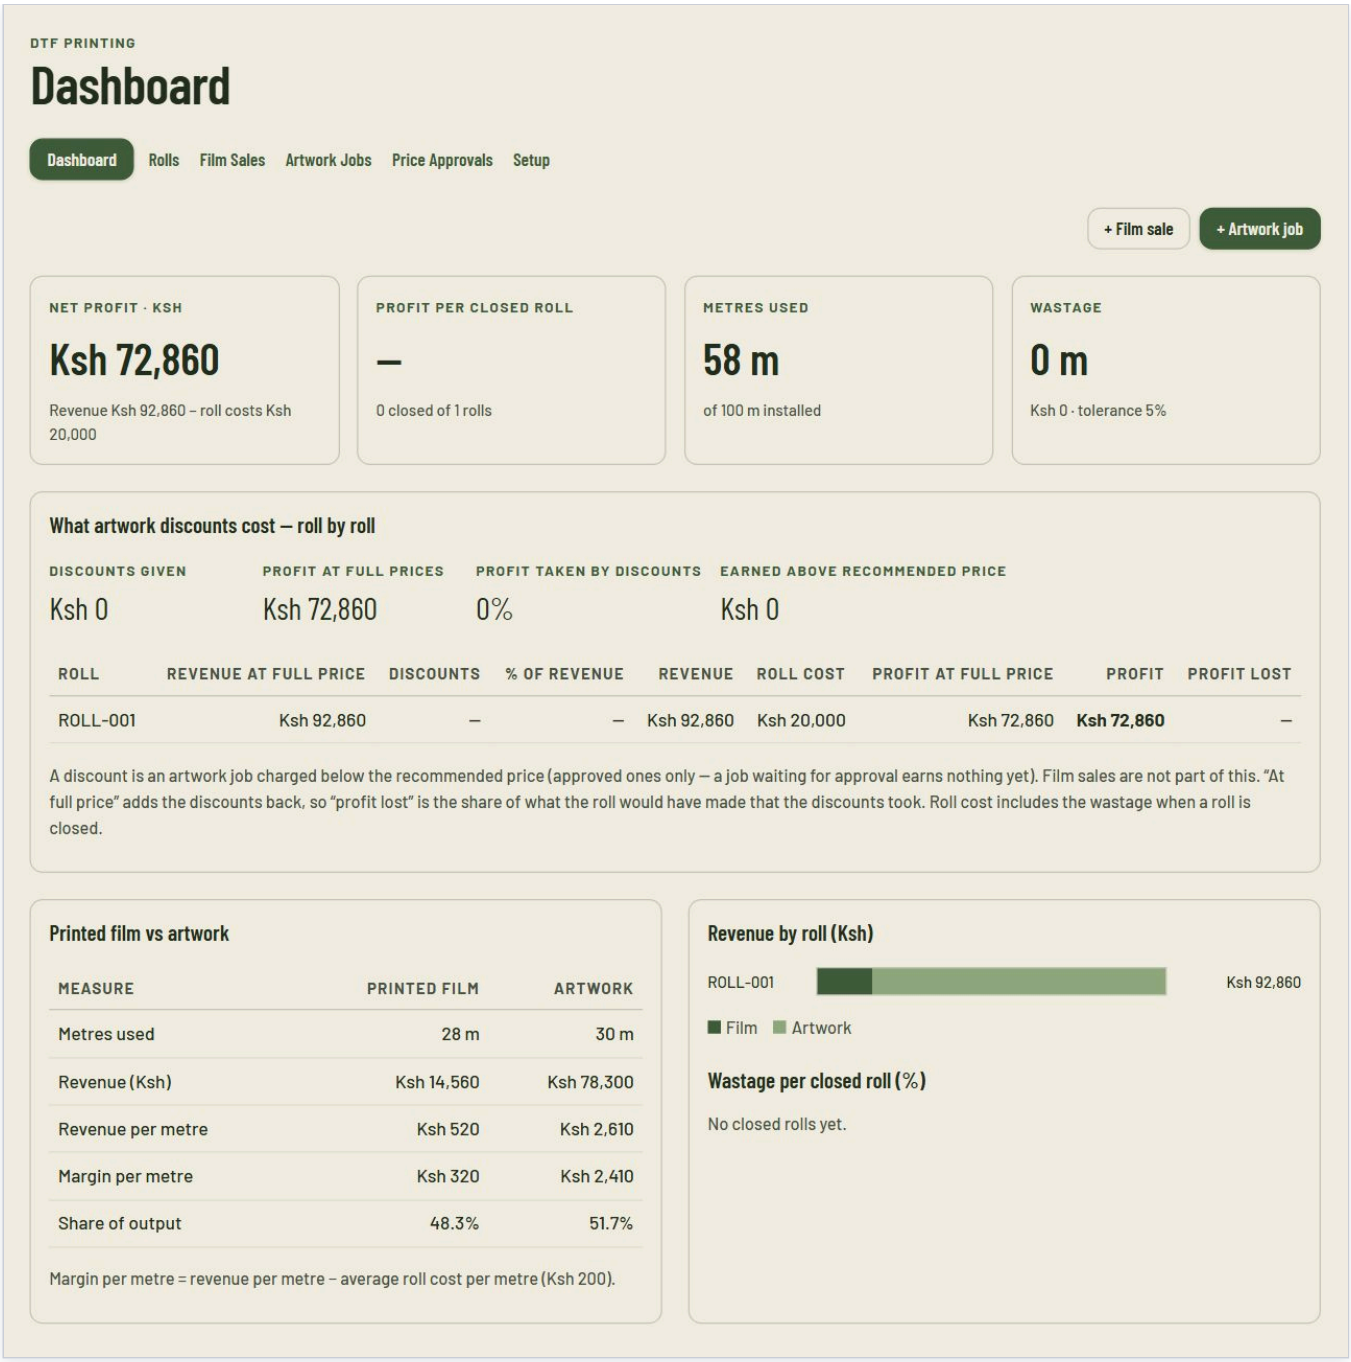

Figure 31 — DTF → Dashboard: net profit, metres used and wastage, what discounts cost roll by roll, printed film versus artwork, and revenue by roll.

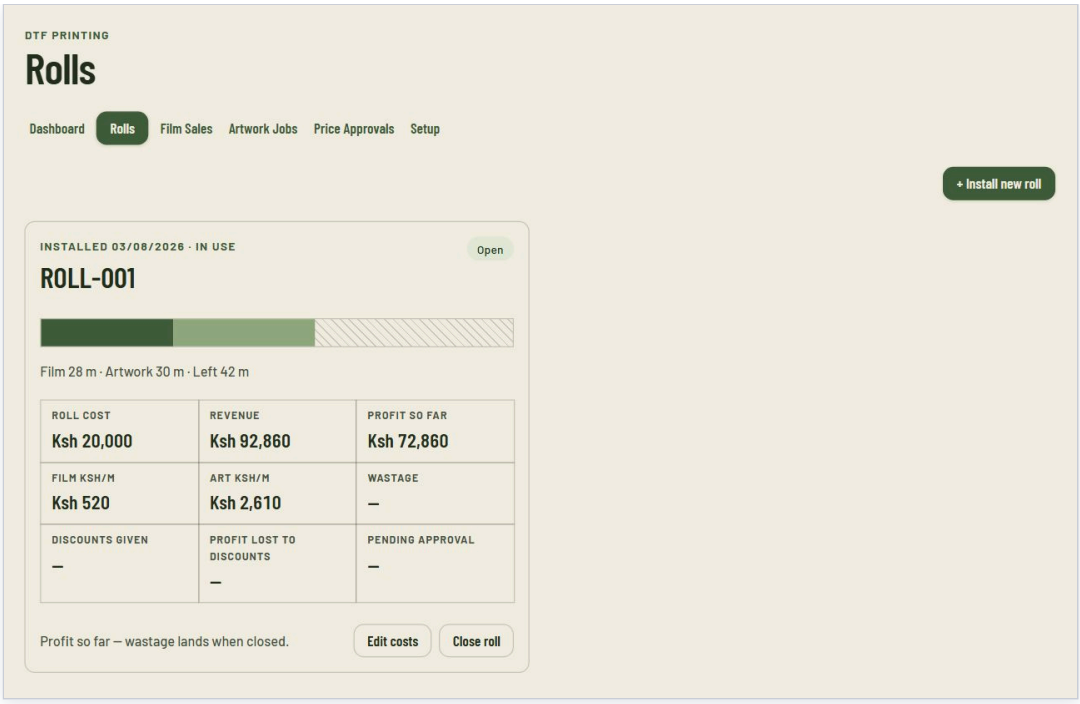

Figure 32 — DTF → Rolls: install a roll with its real film, ink and powder cost; close it to work out wastage.

Starting the system with a roll that is already in use

When you go live there is usually a roll on the machine that is part-used. Do not install it as a full roll — the system would think the metres already used were still there. Use **DTF → Rolls → Install new roll** and tick **This roll is already partly used**:

1. Measure the film **left on the roll** and enter it as **Metres left on the roll now**. It must be less than a full roll (the length set in DTF → Setup).
2. Enter the **film** and **ink / powder cost of the whole roll** (what you paid for it). Do not work out the part-used share yourself: the screen shows what the roll will carry before you install it.
3. Press **Install roll**. The system tracks only the **metres left**, and gives the roll only the **share of the cost that matches them** — a roll with 60 of 100 m left carries 60% of its cost. Sales and jobs recorded from now draw it down; profit, cost per metre and wastage are worked out on the part the system actually saw, so they are not distorted by the sales made before it started.

The roll's card says *Installed part-used* and how many metres were used before it was recorded. **Edit costs** on such a roll changes the cost of the metres left, and shows **Metres left when it was installed** so a wrong entry can be corrected (the costs are re-scaled to the new metres). It cannot be set lower than what has already been sold or used on the roll.

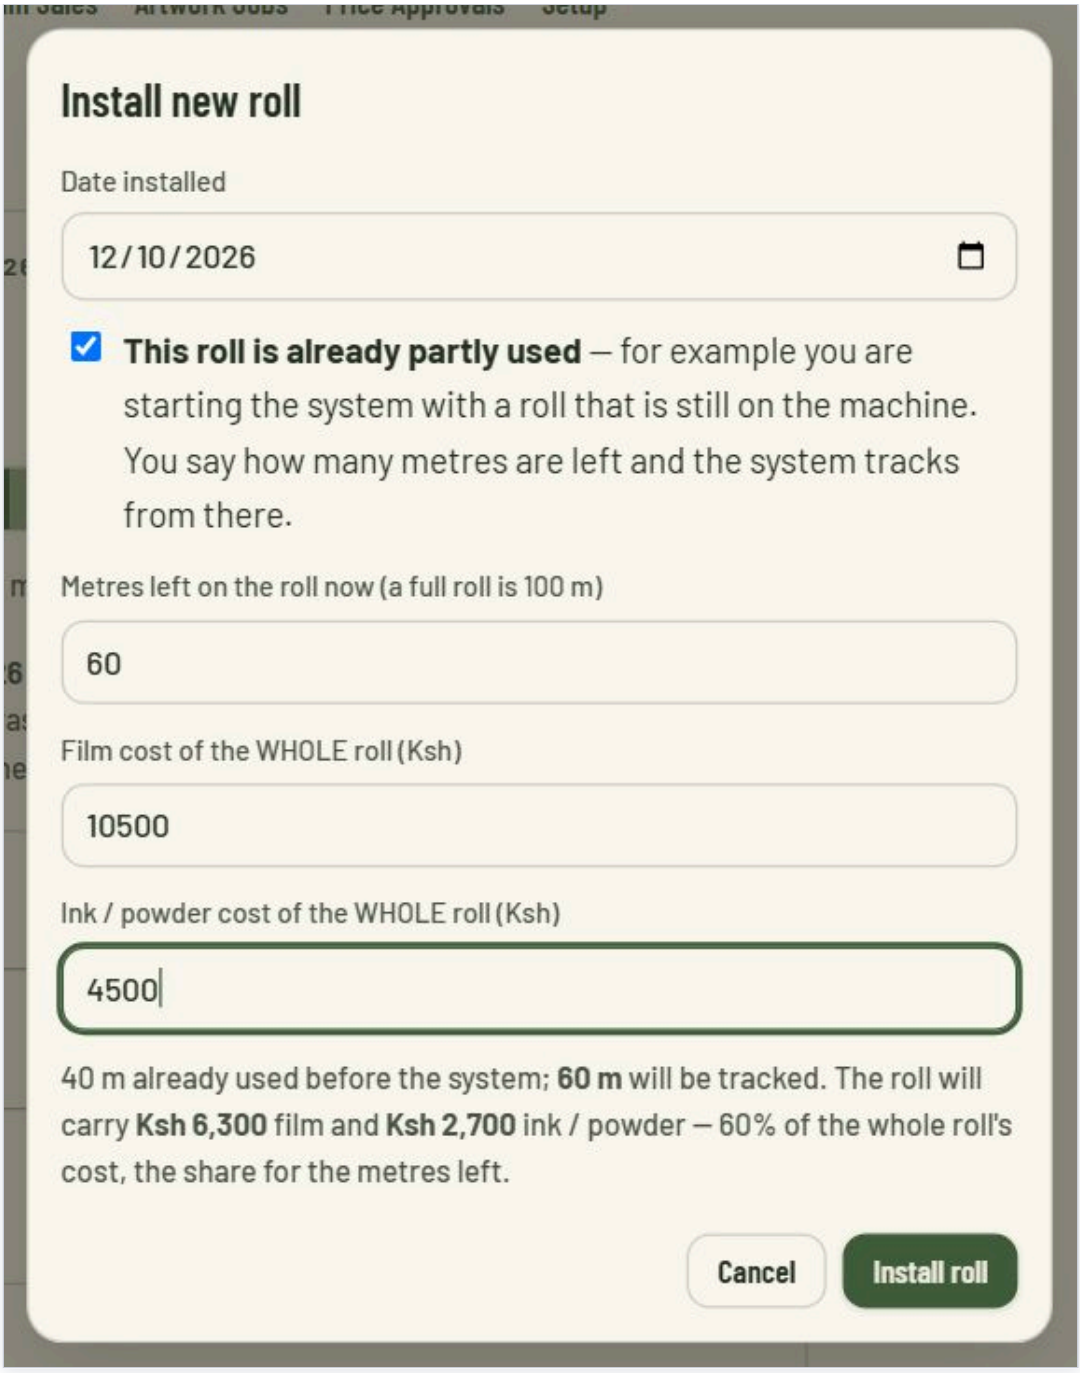

Figure 33 — Install new roll, with *This roll is already partly used* ticked: the metres left, the cost of the whole roll, and what the system will carry.

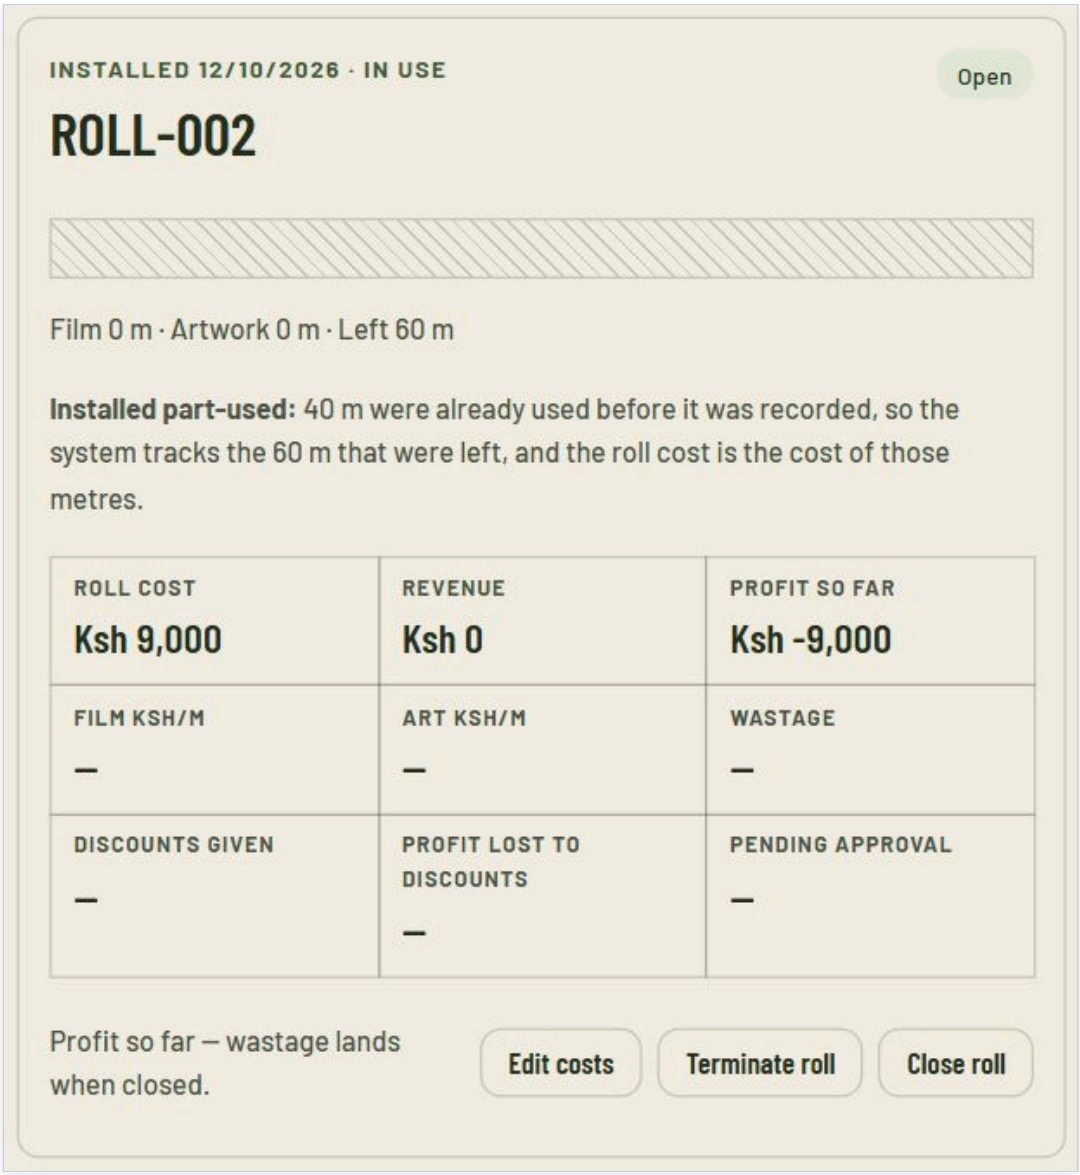

Figure 34 — The roll afterwards: 60 m tracked, the note about the 40 m used before it was recorded, and the cost of the metres left.

UV DTF has its own rolls

The **DTF** page has a **DTF | UV DTF** switch at the top. Choosing **UV DTF** shows UV DTF's own rolls, film sales, artwork jobs, price approvals, dashboard and setup; nothing is mixed with DTF, and everything works the same way (including a part-used roll and *Terminate roll*).

- **Rolls are numbered UV-001 and up.** A roll is **two films** — **Film A (printing)** and **Film B (laminating)** — so installing one asks for the cost of each (for example KES 6,500 and KES 4,500, KES 11,000 for the 50 m, or KES 220 a metre). The costs are entered for each roll, so a price change only affects the next roll; *Edit costs* corrects a roll.
- **Setup** holds UV DTF's own figures: roll 50 m × 30 cm, standard price KES 1,500 a metre, floor KES 1,200, wastage tolerance 5%, and for artwork a charge of KES 4,280 a running metre, shared between the artworks on it, a base price of KES 40 (an artwork's share below 40 is recommended at 40) and a lowest price per artwork of KES 30.
- Sales and jobs are recorded against the price-list services *UV DTF Sheet (per metre)* and *UV DTF Printing*, which the system creates the first time they are needed, under the business head **UV DTF**

Printing.

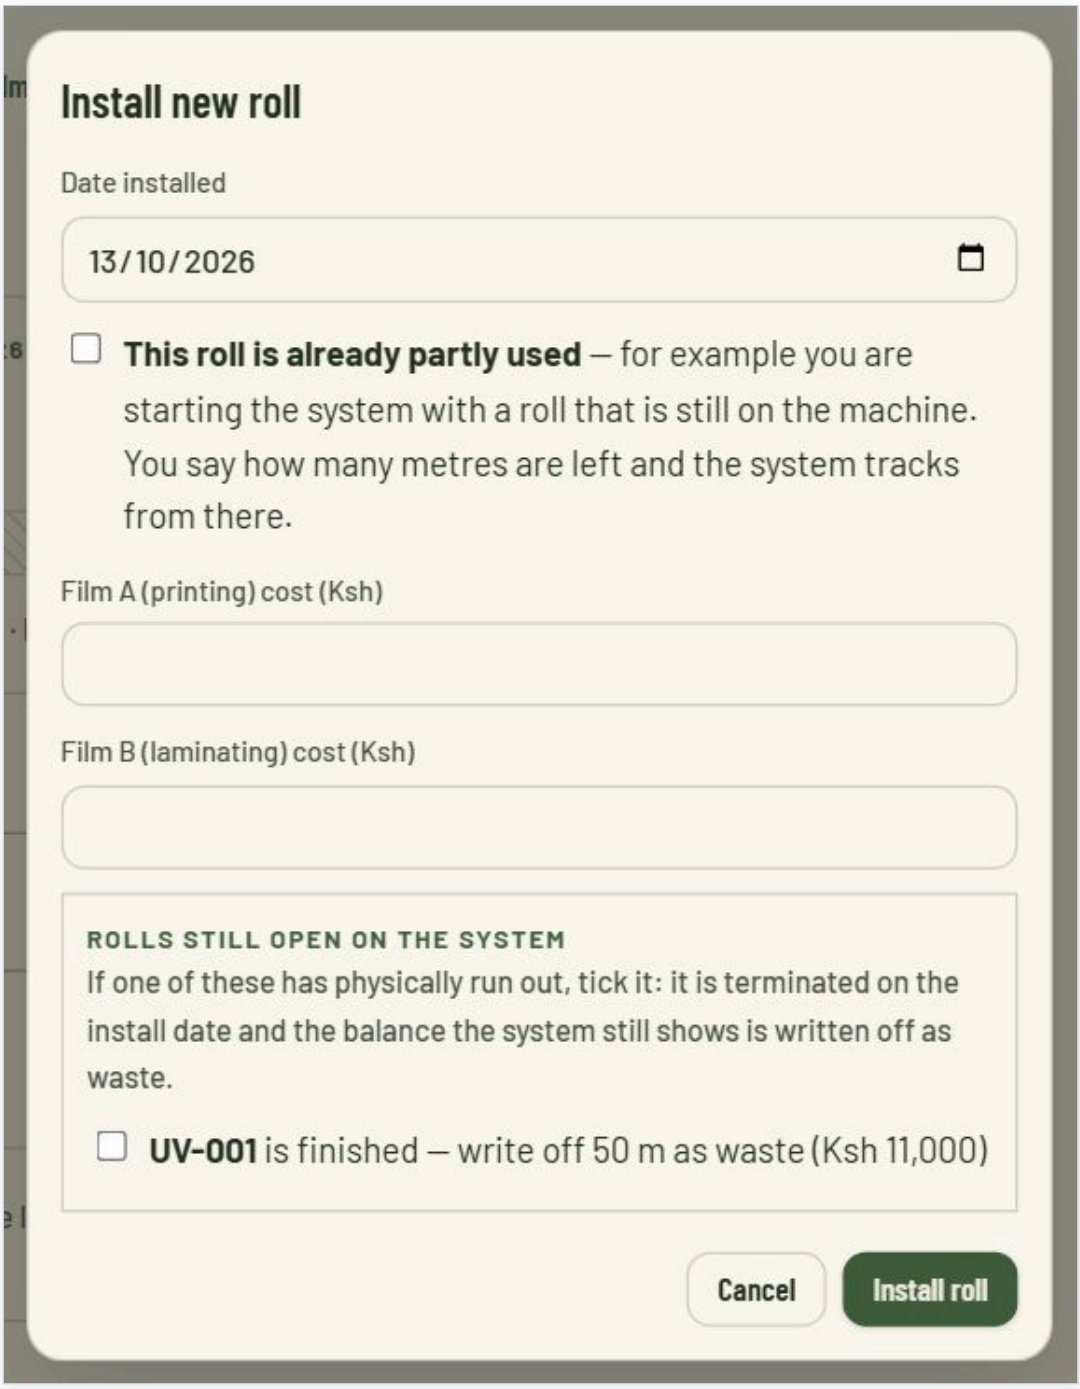

Figure 35 — DTF → UV DTF → Rolls → Install new roll: the cost of each of the two films.

When a roll has run out but the system still shows a balance

Rolls are drawn down by the sales and jobs recorded against them, so a roll that was used without every sale being recorded — or that is simply finished — can still show metres on the system. **Terminate roll** (on an open roll in **DTF → Rolls**) deals with it:

1. Press **Terminate roll**. The screen shows the balance the system still holds and what writing it off means in metres, percentage and shillings.

2. Choose the **cut-off date** (not before the roll was installed, not in the future, and not before its last sale or job) and give the **reason**.
3. Press **Terminate & write off**. The roll is closed at the cut-off date, **the balance is treated as waste**, and the roll takes no more sales. The card says *Terminated*, who did it and why, and the Dashboard's wastage includes the amount.

When installing the next roll, **Install new roll** lists any rolls still open: tick the ones that are finished and they are terminated at the new roll's install date as the new roll goes in — all in one step. A roll with artwork jobs still waiting for a price approval cannot be terminated until those are decided. *Reopen* undoes a termination.

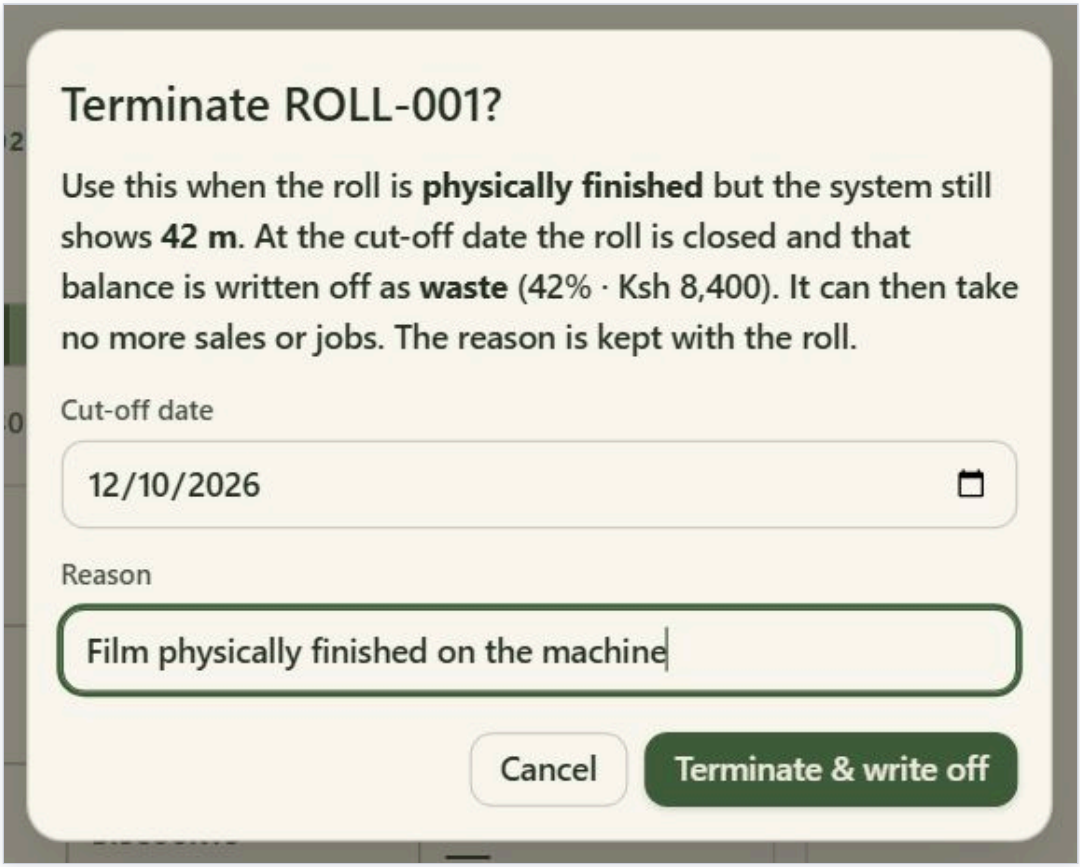

Figure 36 — Terminate roll: the balance still on the system, what it will cost as waste, the cut-off date and the reason.

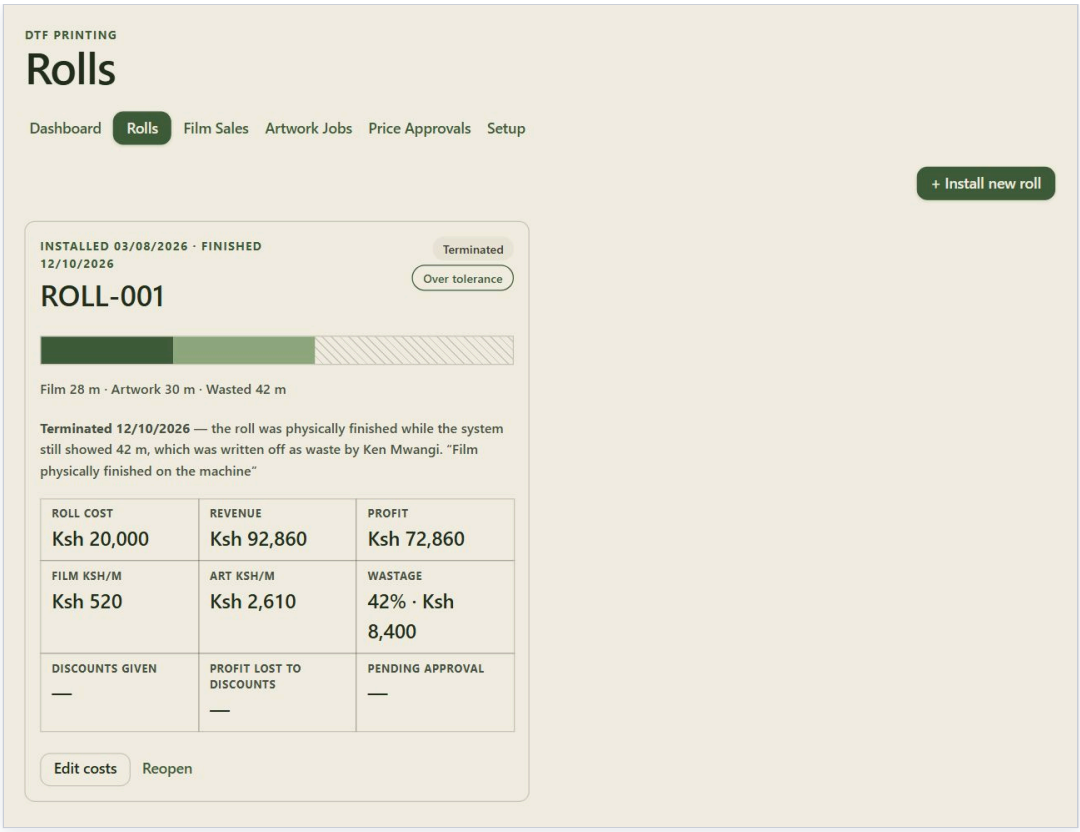

Figure 37 — The roll afterwards: tagged *Terminated*, with the note, who did it, and the wastage.

11 Finance: expenses, petty cash, assets

Expenses

Finance → Expenses is the one ledger for money going out.

1. Pick the **date**, **category** (an expense head), **business head** (optional, or Shared), amount, how it was paid, and the supplier and invoice number if you have them.
2. **Paid now** or **on credit**. A bill on credit needs a supplier and due date, and appears in **Owed/Due** columns until it is paid. Use **Pay** on the row to record a full or part payment.
3. **VAT.** Each expense head is set once as VAT-claimable or not; every expense under it follows. Claimable VAT becomes input VAT automatically.
4. **Withholding tax.** Expenses that deduct withholding tax (for example freelance commission) record it, and it appears in Payments due.

The list shows an **Order** column for supplier bills raised from an order, so every outsourced cost links back to its job.

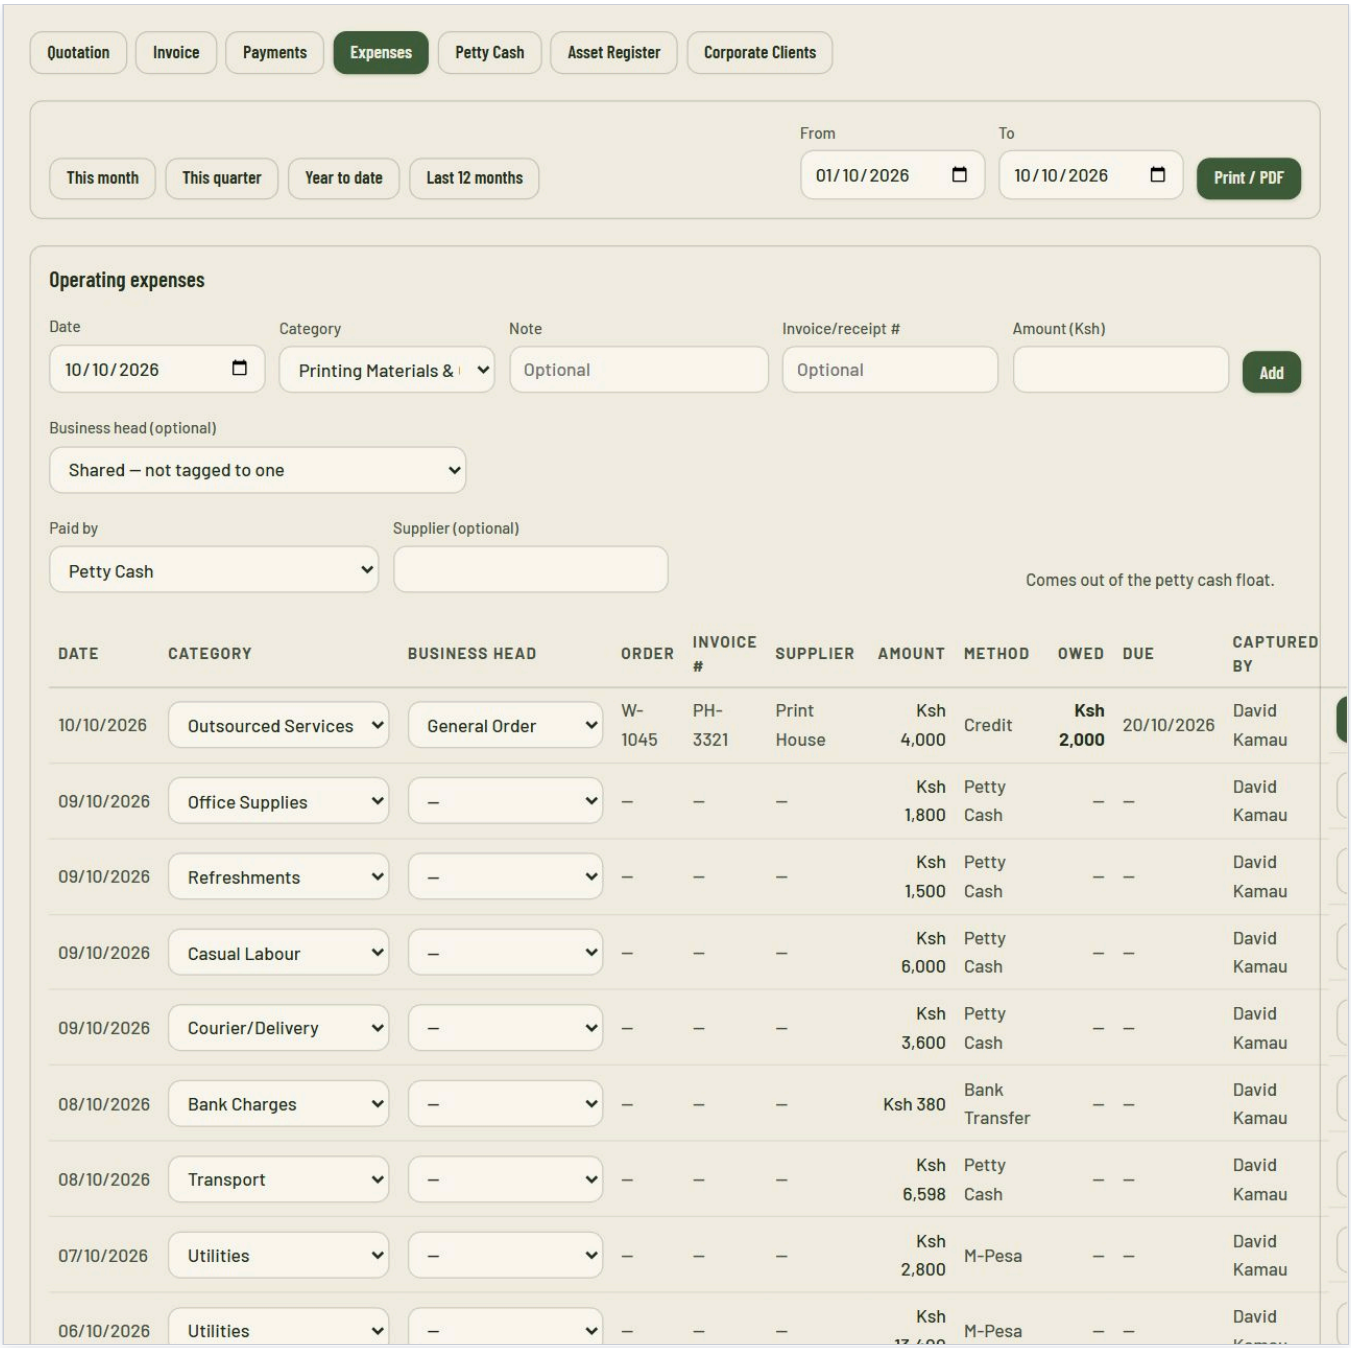

Figure 38 — Finance → Expenses: capture form at the top, then the list with category, business head, Order, supplier, amount, method, Owed and Due, and the Pay, Amend and delete buttons.

CORRECTIONS NEED A SECOND PERSON

- **Amend**: propose the new values with a reason. A different finance manager approves before anything changes.
- **Delete** (✕): raises a request with a reason. The record stays fully counted until a different manager approves it.
- You can move an expense to the right **category**, or re-tag its **business head**, without an amendment because no amount changes. Moving it off an outsourced job detaches it from that job.

Cheques and the cheque register

Money for salaries, purchases and the petty cash float normally comes out of the bank on **one cheque drawn to the finance head and cashed**; only rarely is a cheque written straight to a supplier or an employee. The system keeps every cheque number, so expenses and purchases can be matched to the bank statement.

- **A cash withdrawal.** Under **Finance → Petty Cash → Feed petty cash** choose the source **Bank Withdrawal**, then type the **cheque number** and who it was **drawn to**. Everything then paid from petty cash — salaries, stock purchases and other expenses — is paid out of that money.
- **A cheque to a supplier.** When you record the expense (or the payment of a bill bought on credit), choose **Cheque** as the way it was paid and type the **cheque number** (it cannot be left blank).
- **No number twice.** A cheque number can be recorded only once; the system tells you which record already has it.
- **Cheques** tab (**Finance → Cheques**). The **cheque register** lists every cheque with its date, payee or purpose, amount and whether it has cleared the bank. When you see a cheque on the bank statement press **Mark cleared** and the date; the ones **not cleared** are the unpresented cheques for the bank reconciliation. Search by number, payee or note. A spoilt or cancelled cheque number is kept with **Keep it in the register**, so the cheque book has no unexplained gaps.
- **Where the withdrawals went.** At the top of the Cheques tab, each cash withdrawal shows how much of it went to **salaries**, **purchases**, **other expenses** and anything else, and what is **left**; press a row to see every payment. The float is pooled, so the oldest money is taken to be spent first. A cheque cashed for several purposes therefore shows its split without anyone tagging each payment. A withdrawal recorded before cheque numbers were kept is marked *no number*: open it and put the number on it.

Petty Cash

The petty cash desk. A role with the **Petty cash desk** permission (the Front Office role has it; an Admin sets it for any role under **Master Data → Roles & Access**) has a **Petty Cash** entry of its own in the menu, without the rest of Finance. It shows what is in the float, what was fed in and paid out, and the petty cash ledger, and it lets them **log an expense** paid from the float: the date, what it was for, the amount, details and an optional receipt number. It is refused if the float cannot cover it. Feeding the float, bills on credit, other ways of paying and removing entries stay with Finance.

Finance → Petty Cash: the float. **Top-ups** (bank withdrawal or cash-sales allocation) add to it; petty-cash expenses and wages take from it. The balance is the top-ups less what has been spent. A payment from petty cash is refused if the float cannot cover it on that date and every later day.

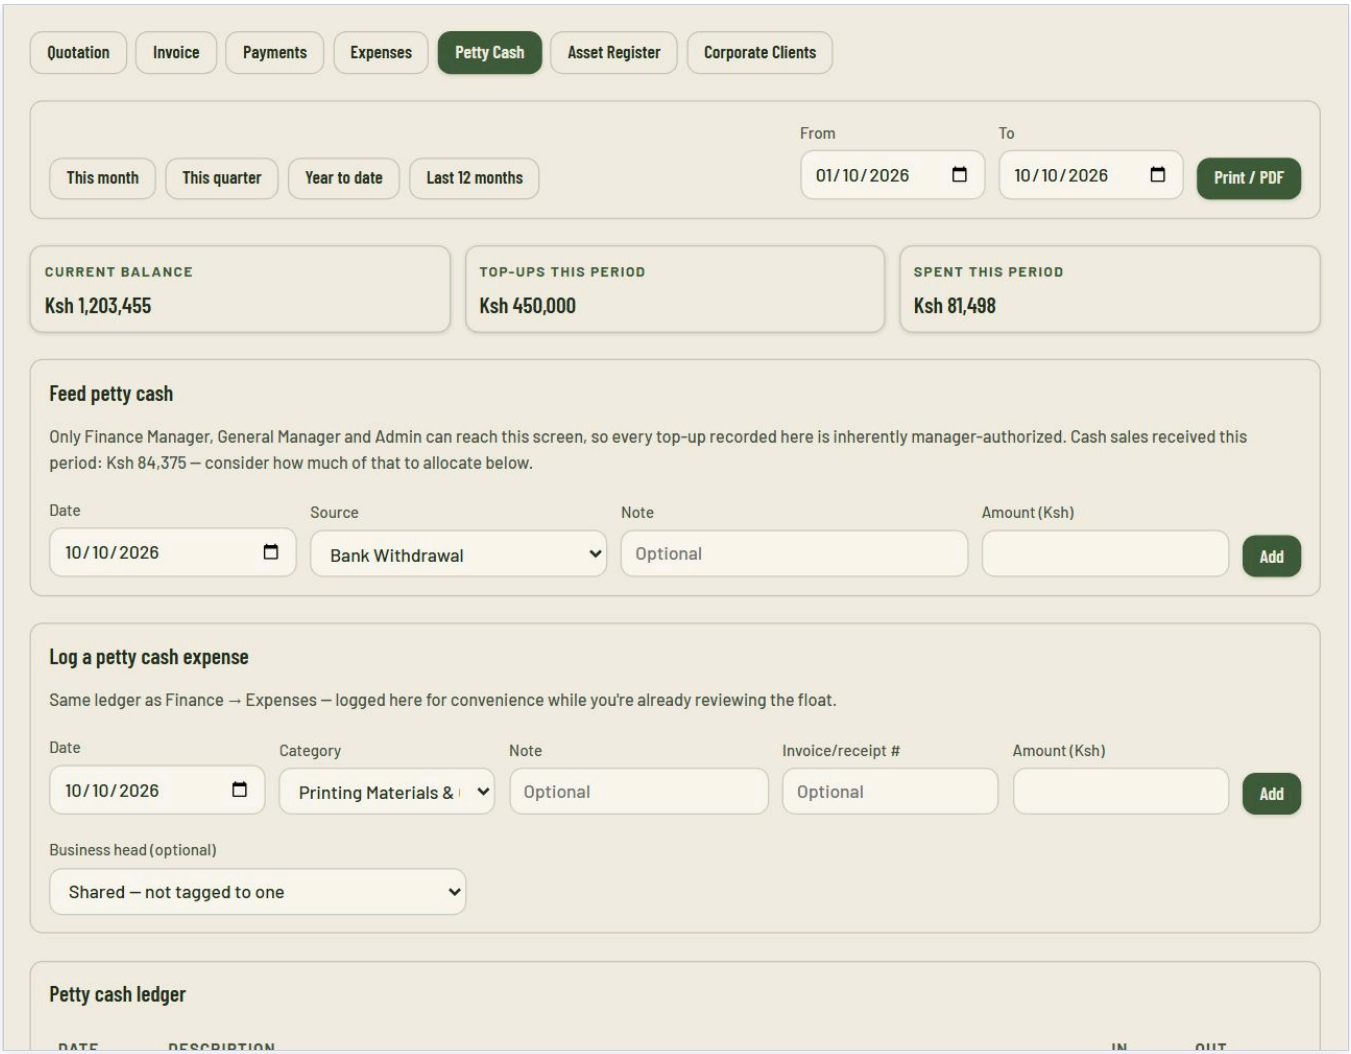

Figure 39 — Finance → Petty Cash: top-ups, the running balance and the petty-cash expense form.

Asset Register

Finance → Asset Register: machines, computers, vehicles and furniture — with category, purchase date and cost, condition (Active, Under Repair, Retired) and status. Depreciation runs by itself each month and appears in the books (Accounting → Depreciation).

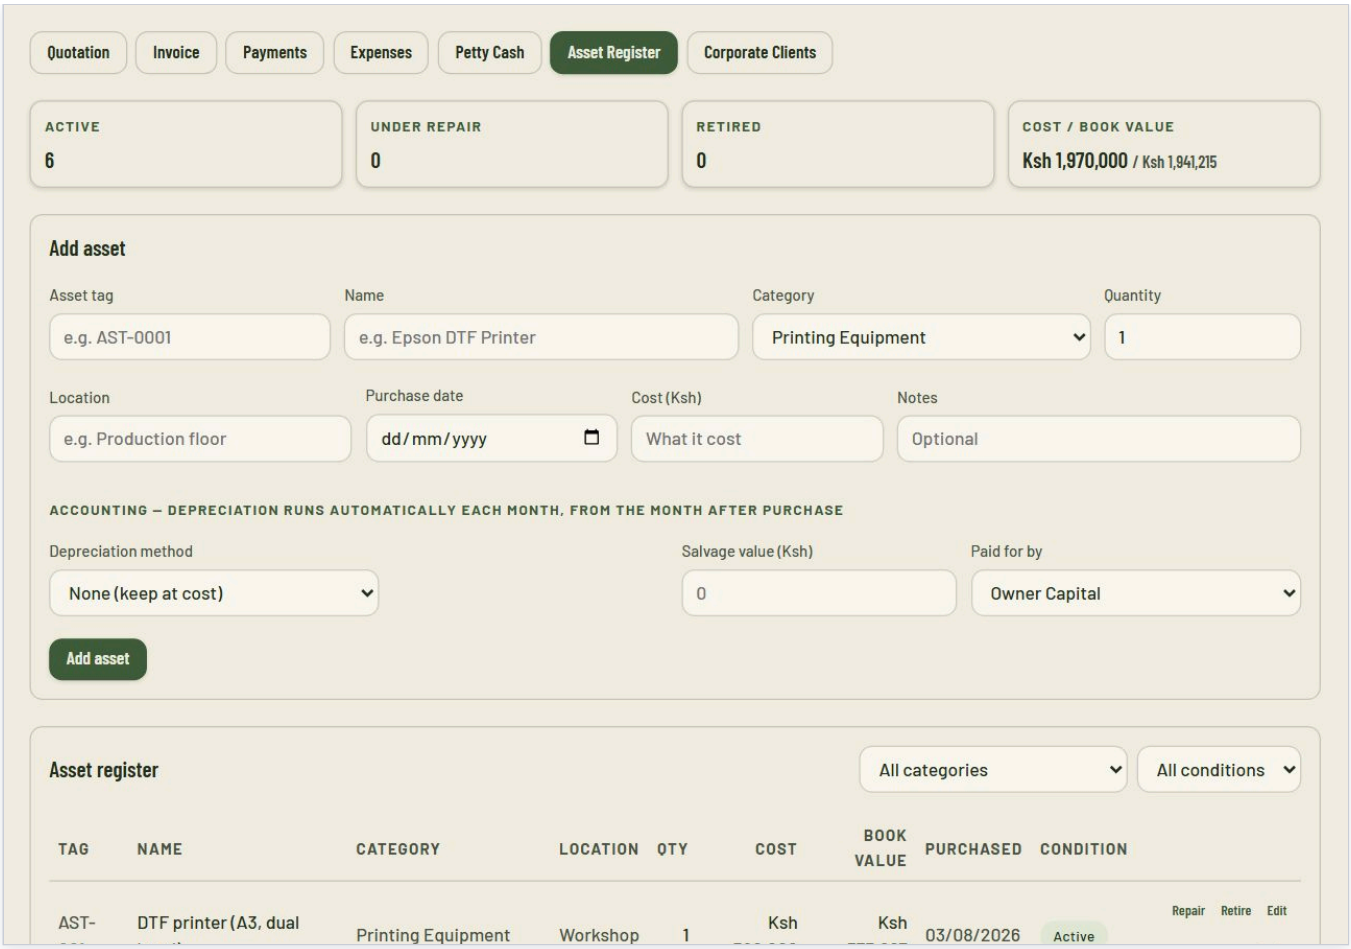

Figure 40 — Finance → Asset Register: tag, name, category, cost and depreciation set-up for each asset.

Corporate Clients

Finance → Corporate Clients: the register that quotations and invoices use. Set credit days, an optional contact person (printed as *Attn:*), email and phone.

---

12 Compliance: VAT, payroll, taxes

Compliance turns the day's records into what Kenya Revenue Authority, NSSF and SHIF expect. Every figure comes from the books, so it always agrees with them.

VAT

Output VAT is the VAT on sales (walk-in sales and invoices, less credit notes, plus debit notes). Input VAT is the VAT you claimed on purchases and expenses. **Net VAT payable = output − input.** A **VAT statement** lists every income and expense account with its VAT, and you can click an account to open the documents behind it.

WITHHOLDING VAT CERTIFICATES

When a customer that is an appointed withholding agent keeps a percentage of the VAT-exclusive value for KRA (2% at the time of writing), they give you a certificate. It is a credit against the VAT you file; it does not change the sale, the profit or anyone's commission. Keep the certificates with the VAT file.

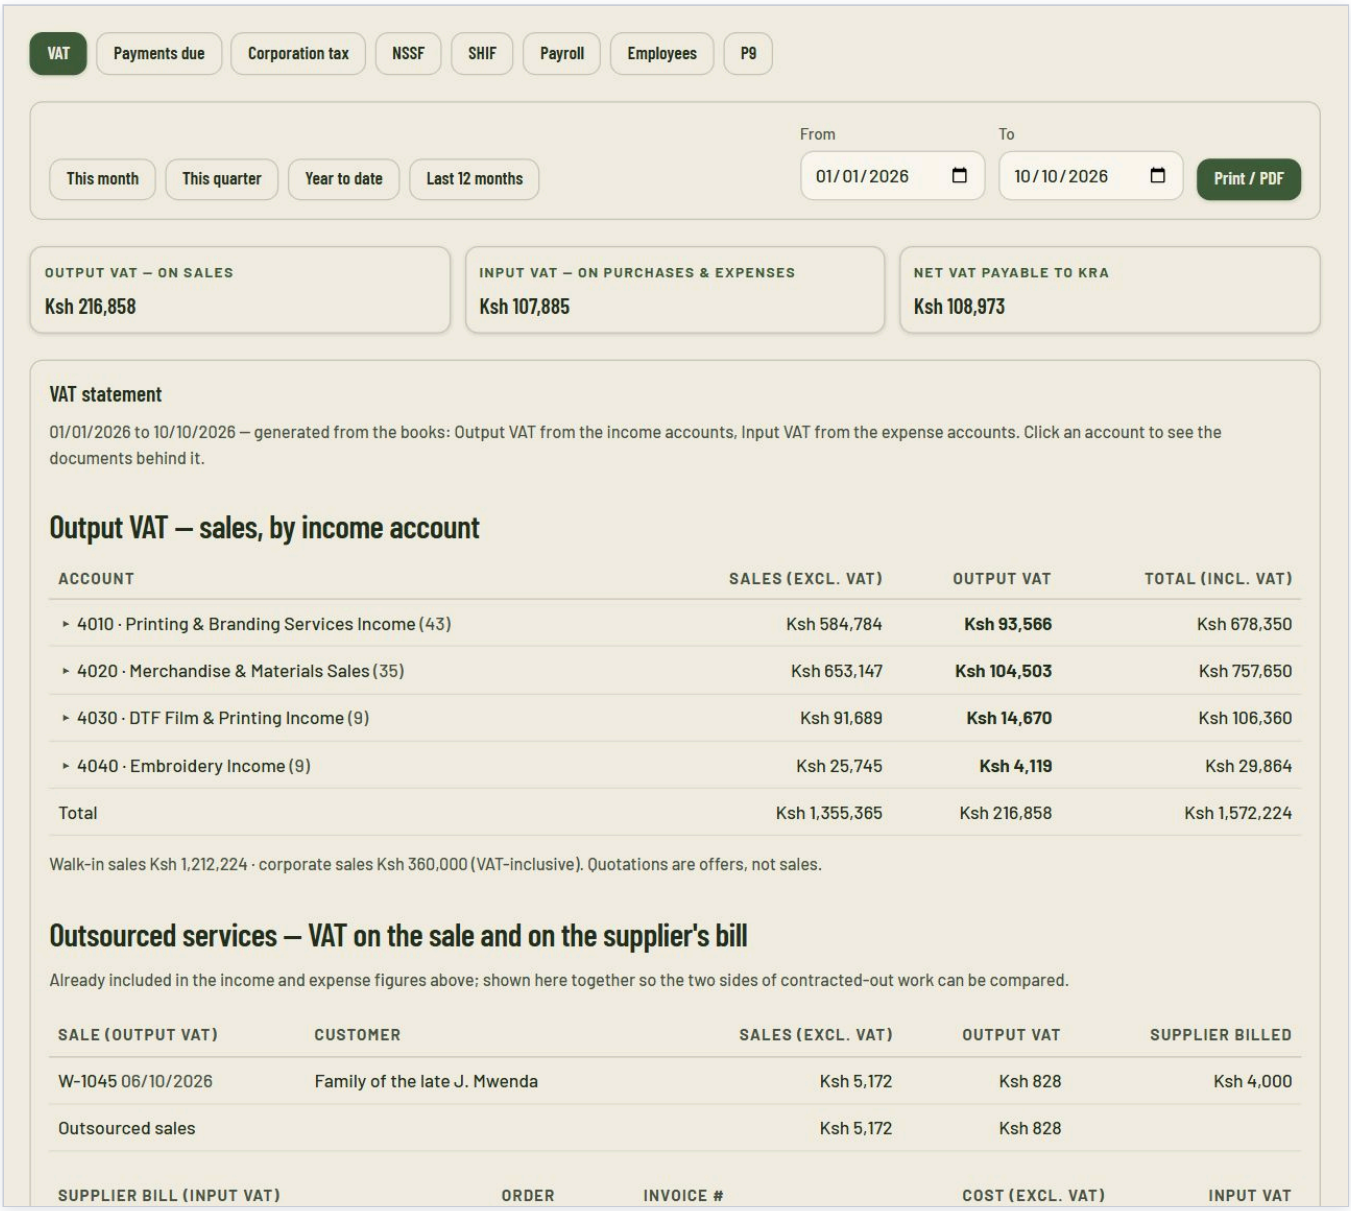

Figure 41 — Compliance → VAT: output VAT, input VAT and net VAT payable for the dates chosen, with the statement by account below.

Payroll FINANCE

Compliance → Payroll. Employees are paid a fixed monthly gross; **casuals** are paid days worked × day rate and carry no statutory deductions.

- The system works out **NSSF**, **SHIF**, the **Affordable Housing Levy** and **PAYE** (with personal relief) from the gross, for both employee and employer shares.
- Wages are paid from petty cash, so the float must cover the net pay.

- Print the **payroll register** and individual **payslips**. **NSSF** and **SHIF** tabs give the schedules for remittance.
- **Employees** holds each person's National ID, KRA PIN, SHIF number and gross salary; **P9** prints a year's tax deduction card for each employee.
- Wrong or duplicate payroll entries are deleted only through the two-person approval.

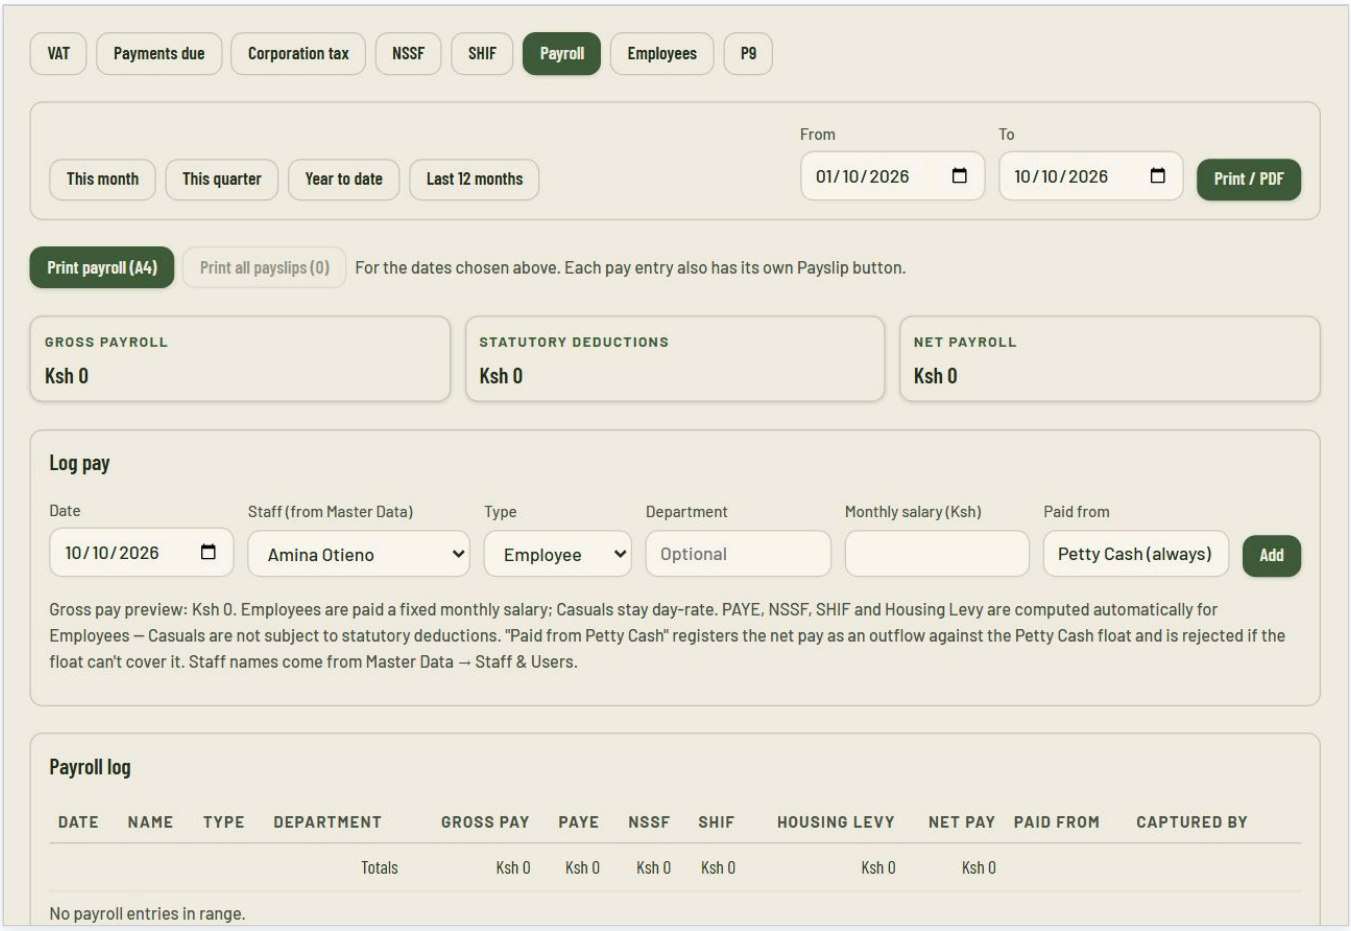

Figure 42 — Compliance → Payroll: each employee's gross, NSSF, SHIF, housing levy, PAYE and net pay, with printing of the register and payslips.

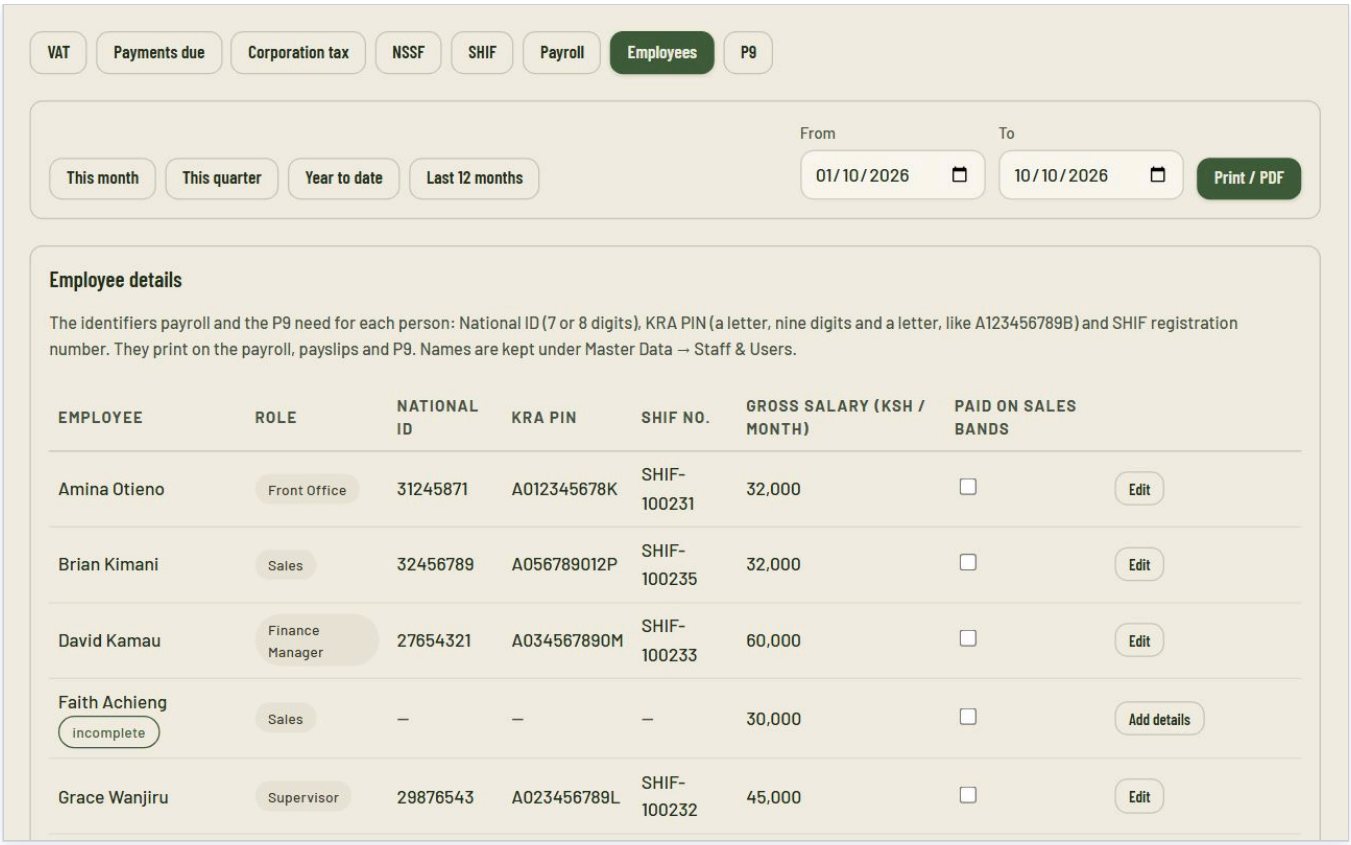

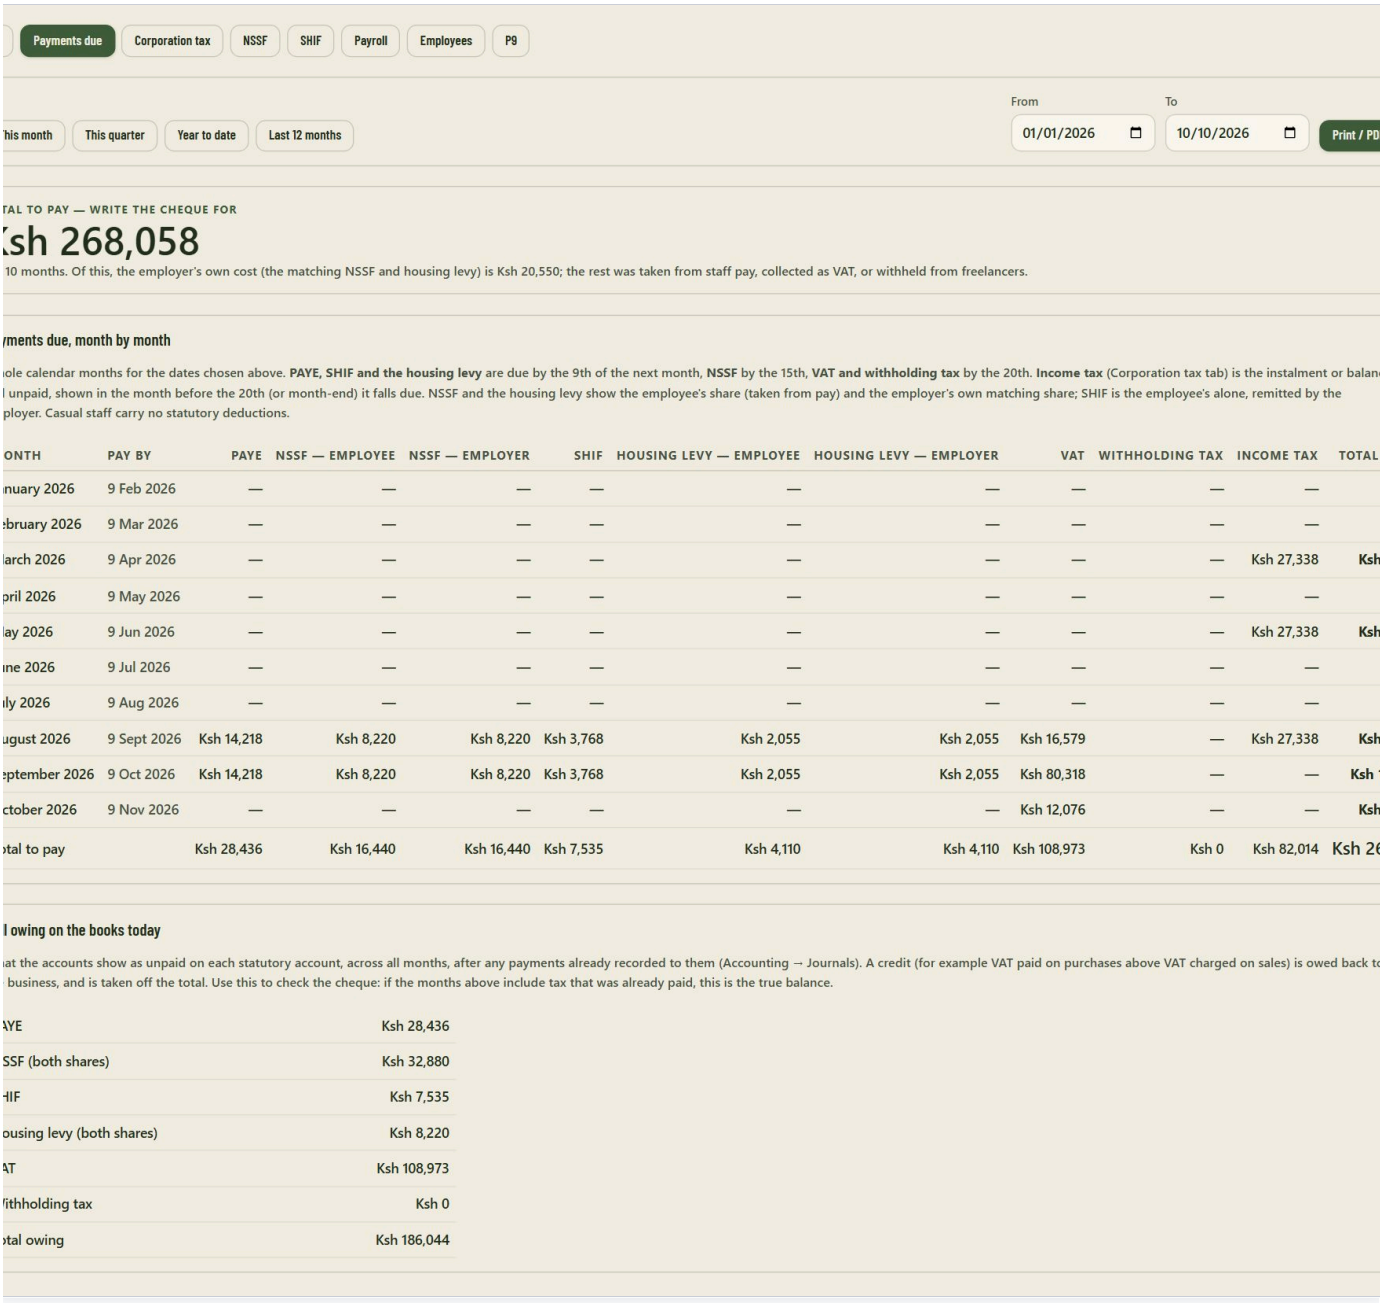

Figure 43 — Compliance → Employees: National ID, KRA PIN, SHIF number and gross salary for each person, and the Paid on sales bands tick.

Payments due — the monthly cheque

Compliance → Payments due lists, month by month, everything the business must pay: PAYE, NSSF (employee and employer), SHIF, housing levy (employee and employer), VAT, withholding tax and income tax — with the **total at the end**. That total is the amount to write one cheque for. Each month shows when to pay: PAYE, SHIF and the levy by the 9th, NSSF by the 15th, VAT and withholding tax by the 20th.

> A month with more VAT on purchases than on sales shows its credit for information. A credit never reduces any other month's VAT, so the cheque always carries each month's full VAT. A second block shows what the books say is still owing on each statutory account, so you can check the cheque.

e 44 — Compliance → Payments due: every statutory payment month by month, with the total to write the cheque for at the top a ue balance still owing on the books underneath. (Zoom in on screen to read the columns.)

Corporation tax

Compliance → Corporation tax works out income tax from the books under the Kenyan Income Tax Act:

- **Company:** 30% of taxable profit. Taxable profit is the book profit, plus what the Act does not allow (depreciation, entertainment, fines and penalties, donations, plus anything you add), less capital allowances and tax losses brought forward. Withholding-tax credits come off the tax.
- **Instalments:** four equal payments on the 20th of months 4, 6, 9 and 12 of the financial year, and the balance by the last day of the 4th month after year end.
- **Small business:** switch to **Turnover Tax** — 3% of each month's sales, due the 20th of the next month (for sales of KES 1 million to 25 million).
- An Admin enters adjustments and records each payment to KRA with its reference. The tax is kept apart from the books, which show profit before income tax.

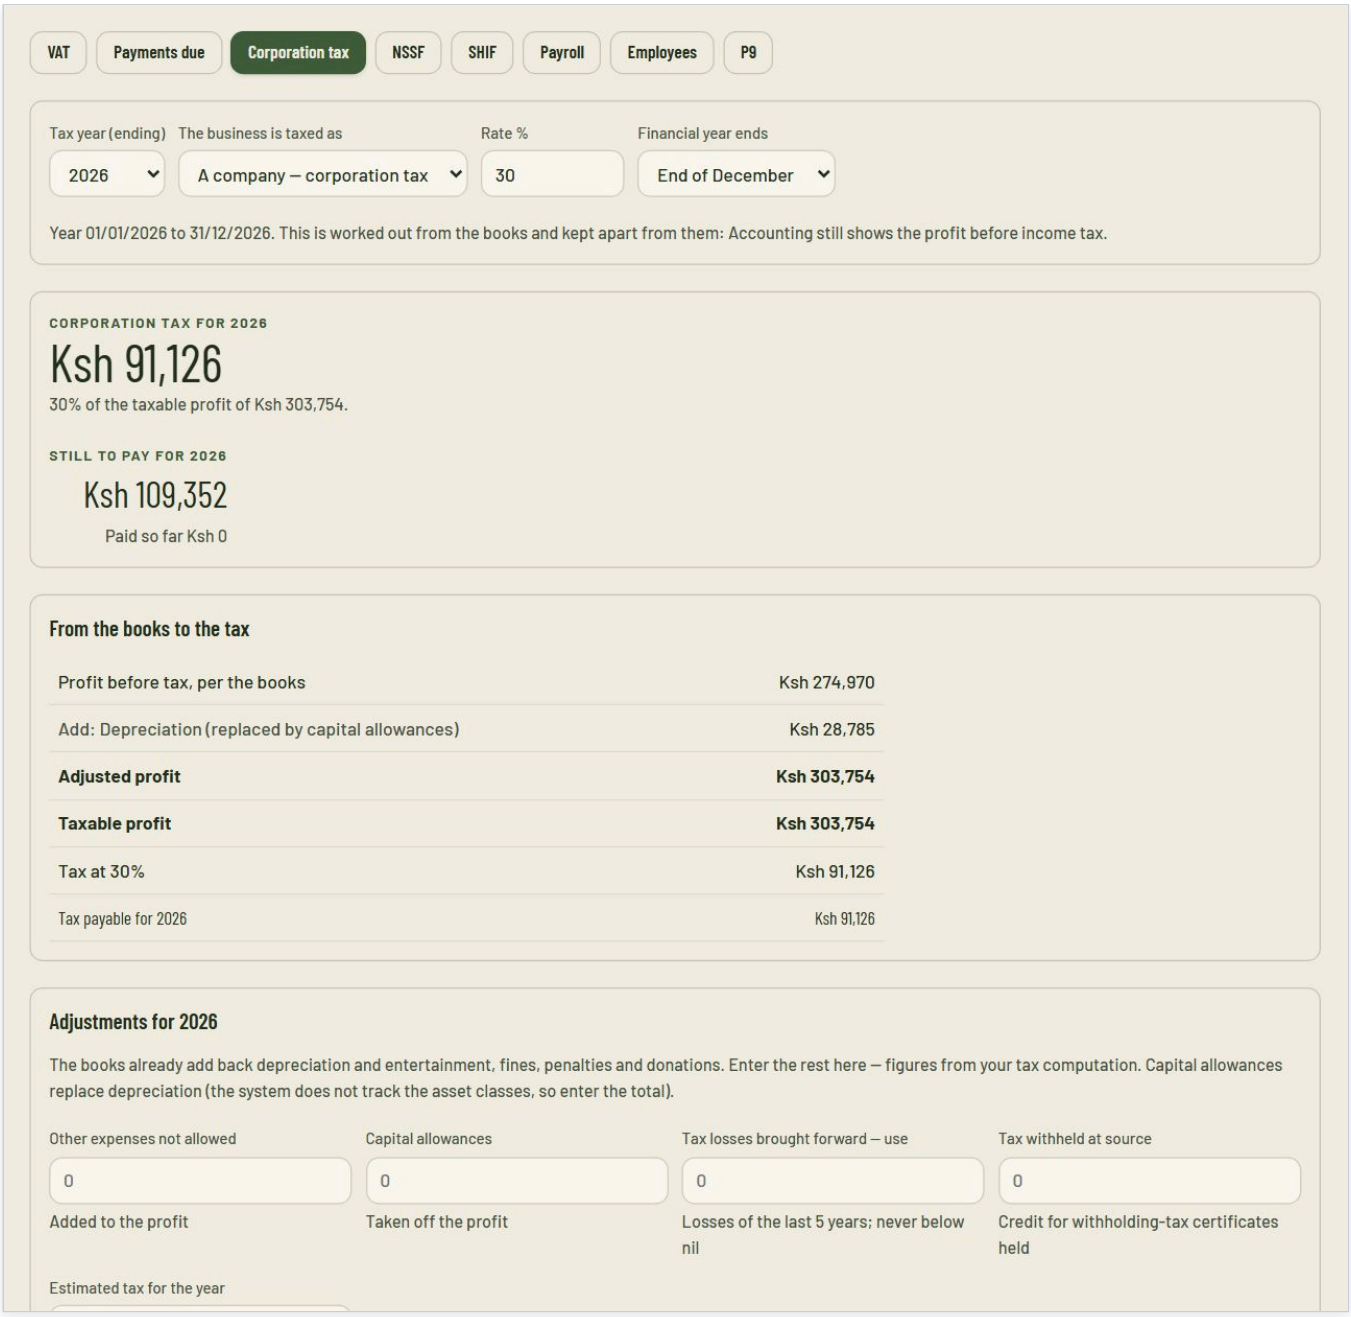

Figure 45 — Compliance → Corporation tax: from the profit in the books to the tax, then the adjustments you enter.

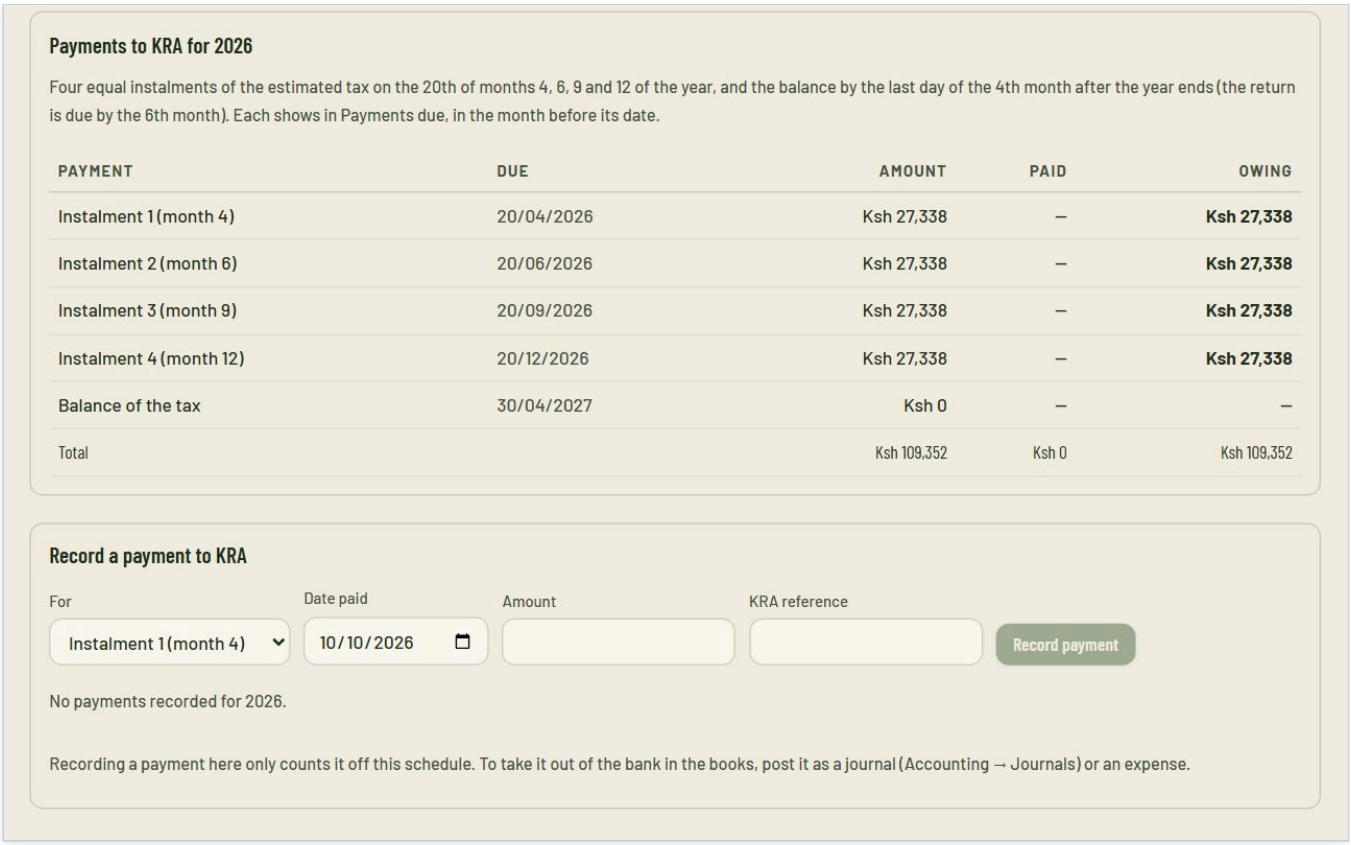

Figure 46 — The instalment schedule and where payments to KRA are recorded.

> **CONFIRM WITH YOUR ACCOUNTANT**
> Tax rates, allowance treatment and the minimum wage are set as placeholders you can change. The system calculates and schedules; your accountant files.

Putting income tax aside through the year

Open **Compliance → Corporation tax**: it starts with the **Tax set-aside planner** (and **Accounting → Profit & Loss** shows a one-line version). It is for planning and information only: nothing is posted to the books and no money moves. Month by month it shows the profit, **what to hold by the end of the month**, the plan for the month, what you actually set aside and whether you are **short** or **ahead**. At the top is the amount to **put aside now** to be on track, the projected tax for the year and about how much more to put aside each month, and a warning when an instalment due to KRA within 60 days (or already past due) is more than the money you hold.

- **How much to hold.** The tax on the year's profit *so far* (the corporation tax rate in Compliance, 30% to start with), on the profit in the books plus the add-backs the tax working makes (depreciation, entertainment, fines, donations and the adjustments recorded for the year). Because it is the year to date, a loss month lowers it instead of going negative, and the figure corrects itself as the year goes on. A business on turnover tax holds that rate of its sales instead.
- **Recording what you set aside.** When you move money into the tax savings (a separate bank or M-Pesa account is best), record the date and amount under the table (*Use …* fills in the amount to move now). Anyone with Finance access can record or remove an entry. Payments made to KRA are still recorded further down the page, and are taken out of what you hold.

The real tax is still worked out from the whole year below the planner; the planner is how you save towards it.

13 Accounting: the books and statements

Behind every sale, payment, expense, payroll run and note, the system posts balanced double-entry records. There is no re-keying, and the statements are always built from the same ledger.

Accounting tab	What it gives you
Profit & Loss	Income, cost of sales and expenses for any date range, with month-by-month columns. Click a line to see the entries behind it. Cost of sales is real (purchases and supplier bills), not an estimate.
Balance Sheet	Assets, liabilities and equity at a date.
Cash Flow	Cash in and out for a period, by activity.
Receivables	Who owes you, aged by how long the invoice has been outstanding.
Payables	What you owe suppliers, aged, with due dates.
Credit / Debit Notes	Issue and list customer and supplier notes (section 8).
M-Pesa Matching	Pair M-Pesa statement lines to orders (section 6).
Depreciation	The monthly depreciation of registered assets, run automatically.
Chart of Accounts	The accounts. They build themselves; you can add accounts you need.
Journals	Manual entries: **opening balances**, owner's capital, remittances of statutory payments, adjustments. Every journal must balance.
General Ledger	Every posting for any account, in order.
Trial Balance	All account balances; debits equal credits.
Books Check	A health check: confirms the books balance and finds anything out of line. Run it before every month-end.

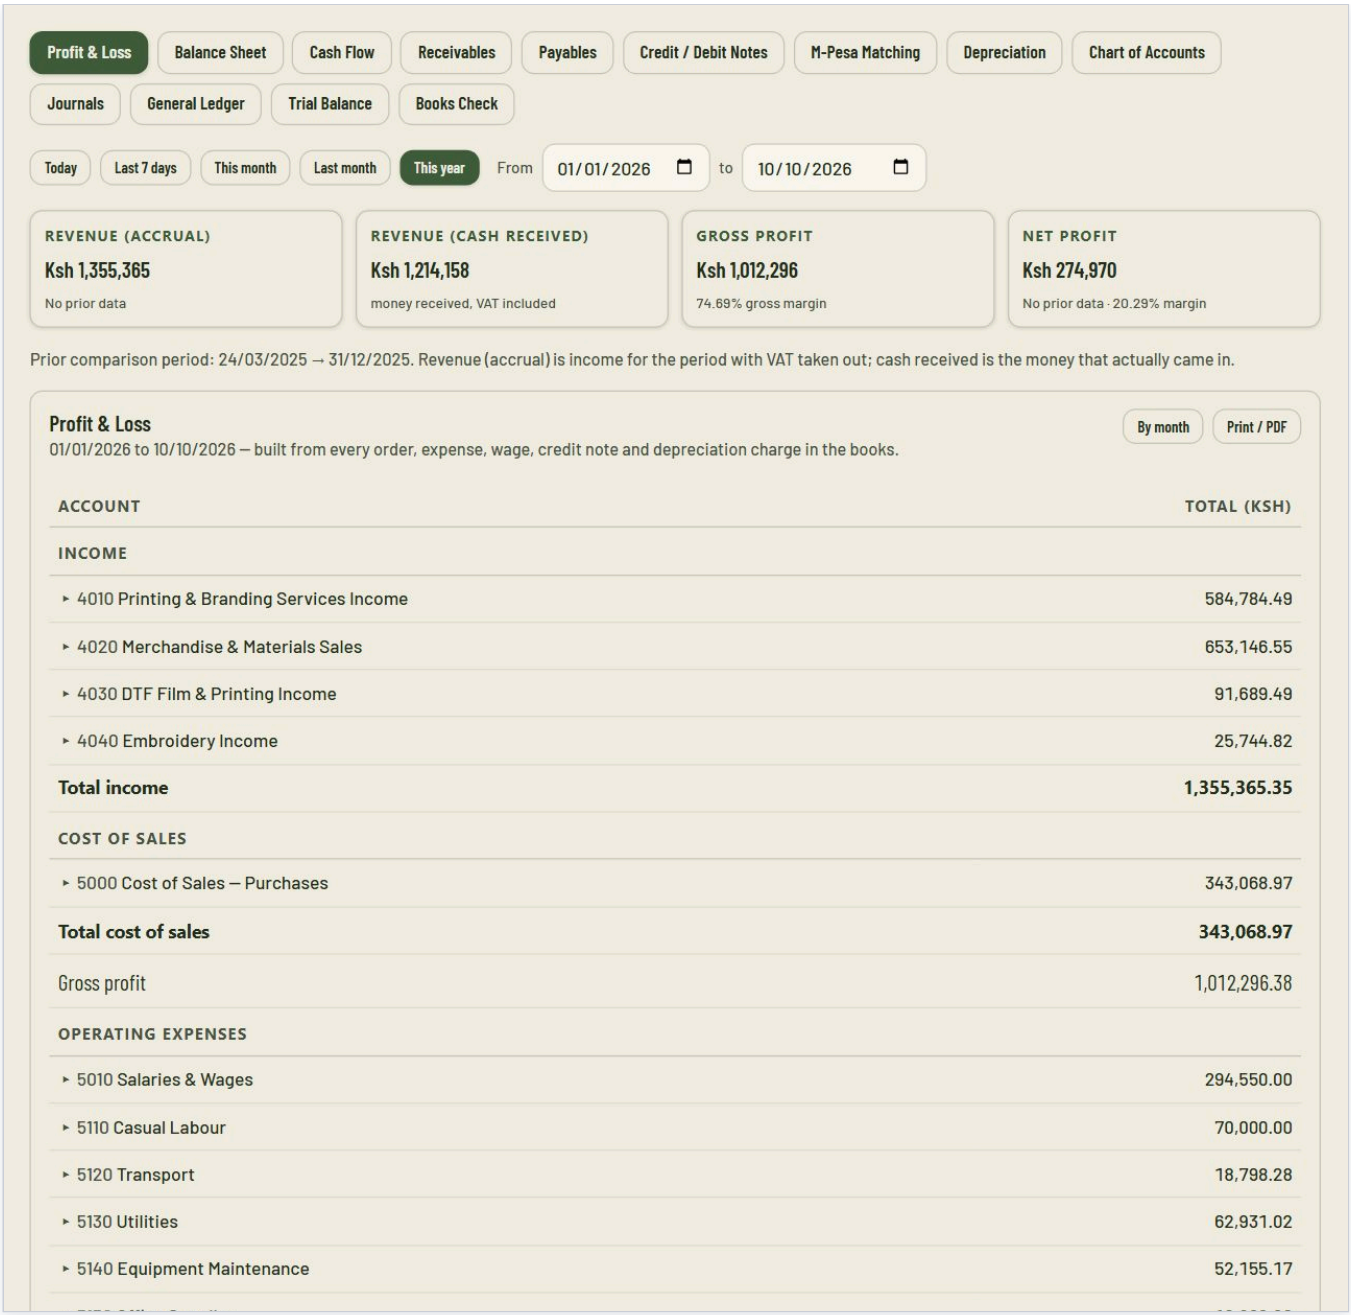

Figure 47 — Accounting → Profit & Loss: income, cost of sales and expenses, with a click-through on every account to the entries behind it.

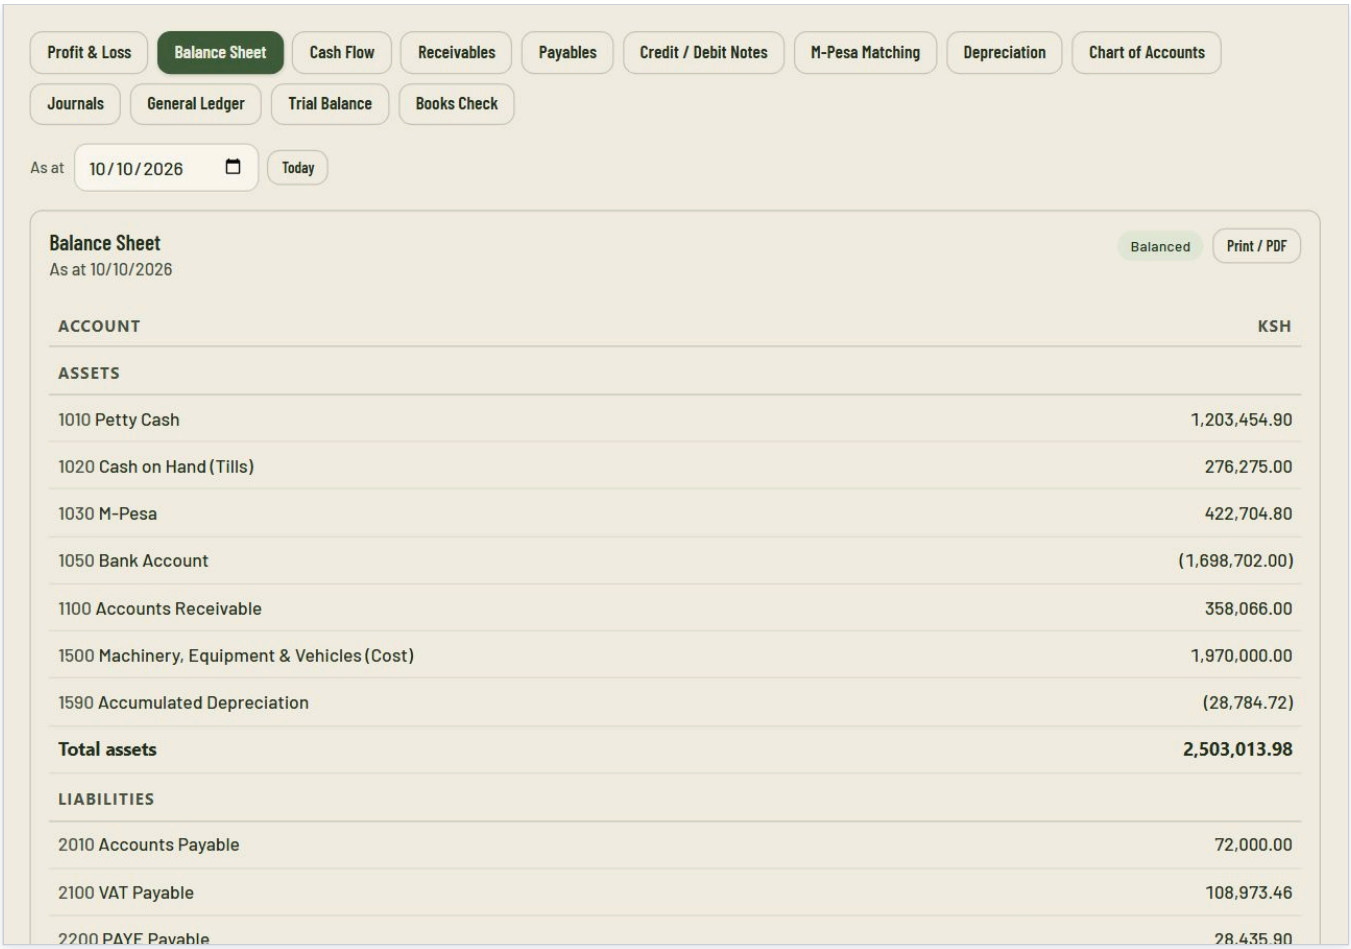

Figure 48 — Accounting → Balance Sheet.

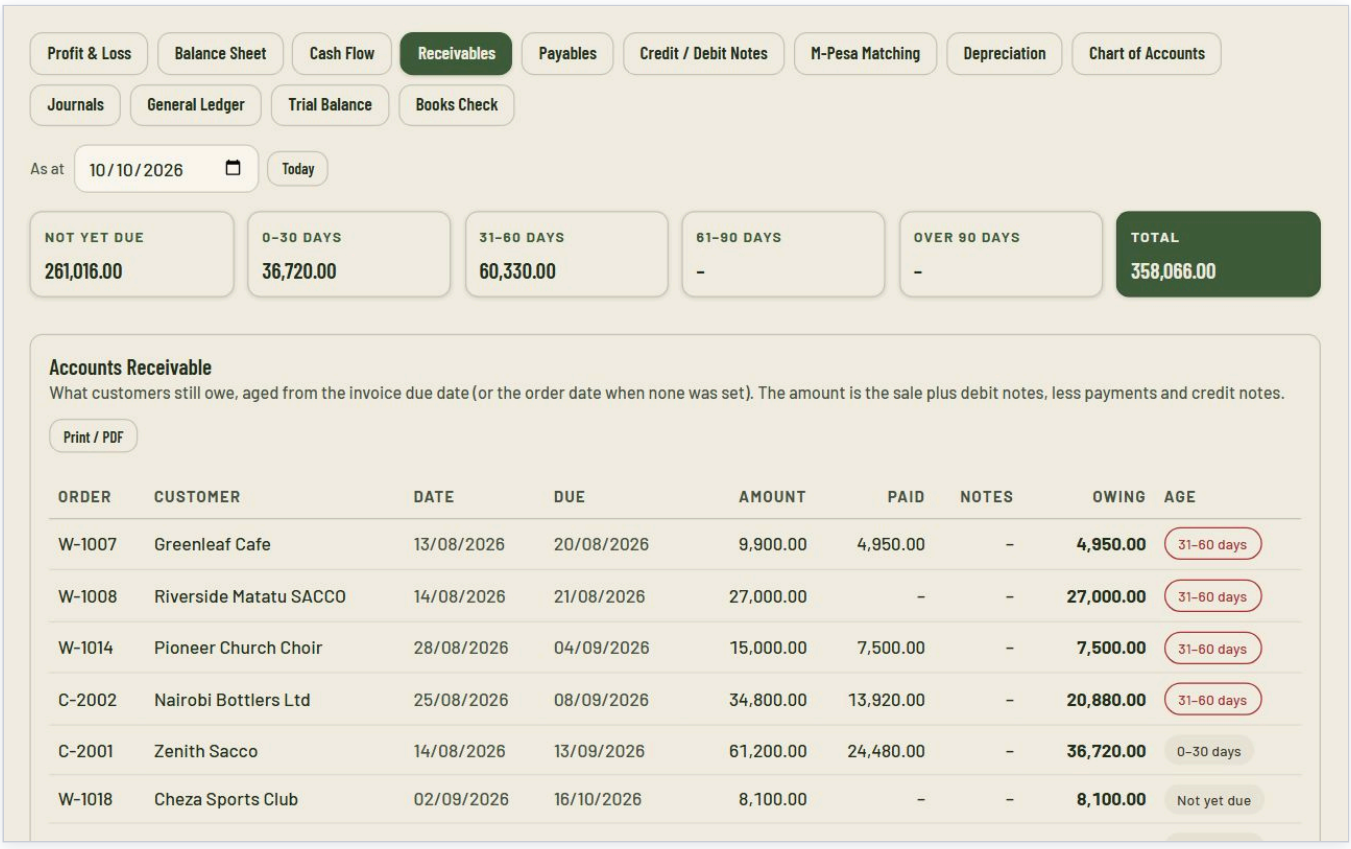

Figure 49 — Accounting → Receivables: who owes you, and how overdue it is.

Who collects. Between **Owing** and **Age** the column **Responsible for collection** names the person who has to collect the balance from the customer. It is **the sales person the sale is credited to**, even when someone else keyed the order (the front office capturing for a sales person, for example), so a sale on credit stays with the person who sold it. Above the table, **Who is responsible for collecting** shows what each person has to collect; press a name to see only theirs. Accounting can hand a balance to someone else with **Change** (the row then says *handed over · sold by …*) and take it back with **Reset**; a person who has left the business cannot be chosen.

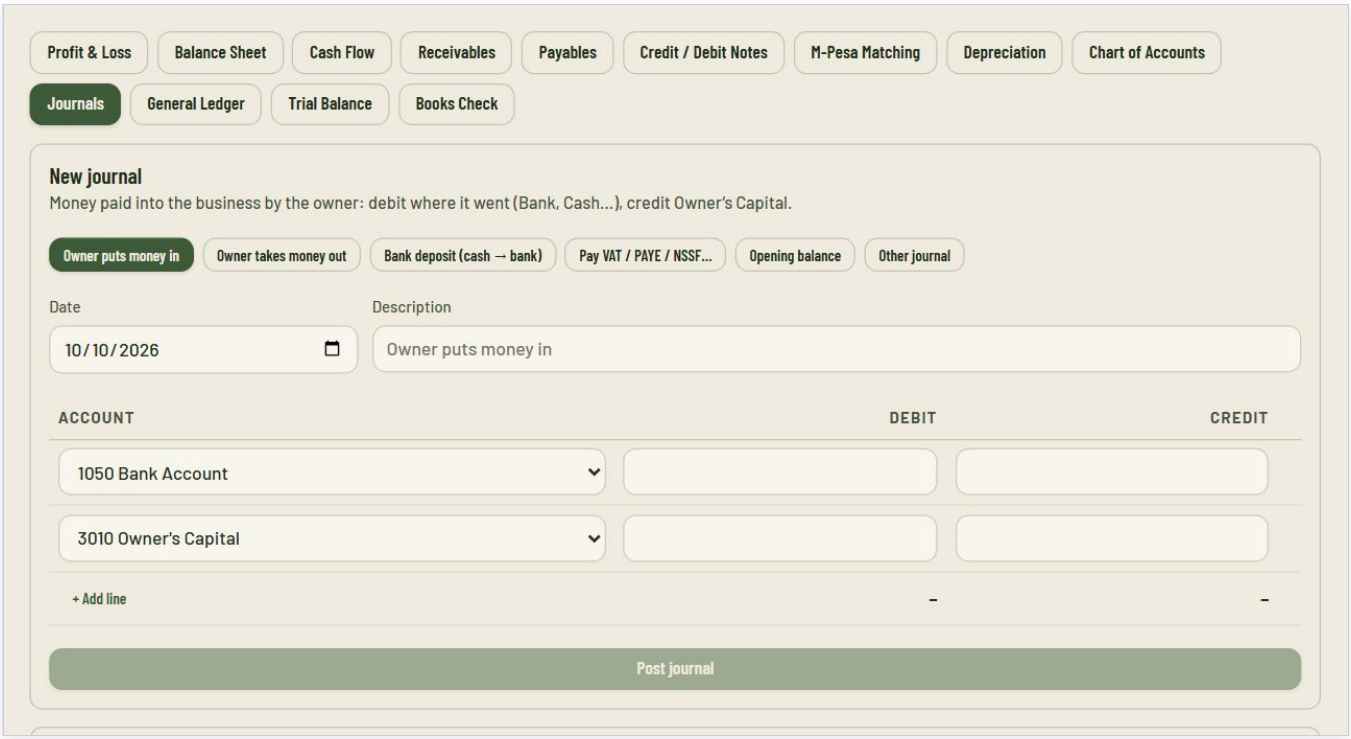

Figure 50 — Accounting → Journals: opening balances and manual entries; every journal must balance.

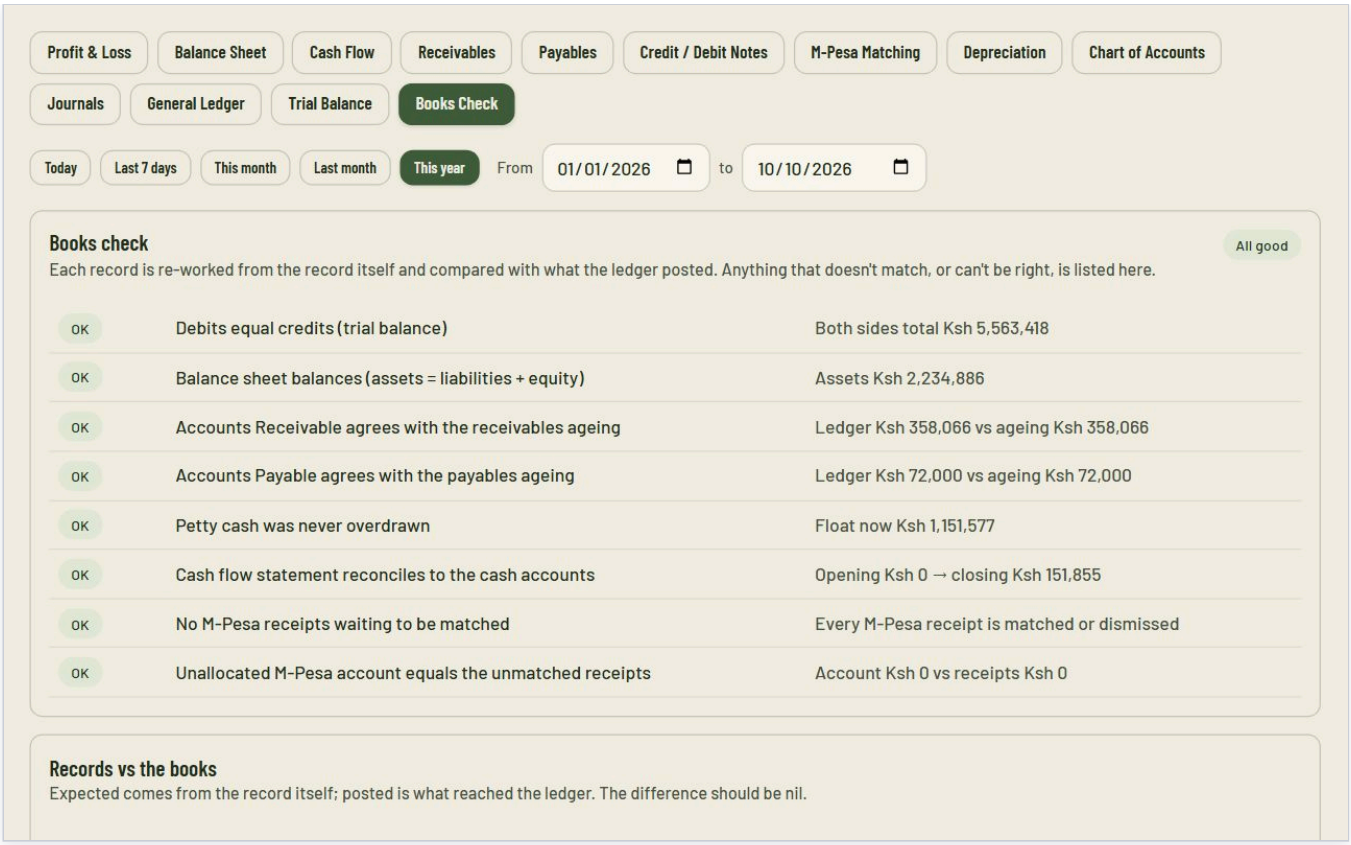

Figure 51 — Accounting → Books Check: confirms the books balance and flags anything out of line.

> **REMITTING TAXES**
> When you pay PAYE, NSSF, SHIF, the levy or VAT to the authority, record it as a journal against the statutory account (Accounting → Journals). The "still owing" figure under Compliance → Payments due then reduces.

14 Sales commission and staff pay

The **Commission** module appears when an Admin switches it on (Master Data → Company Info). Everyone who captures orders sees **My commission**: what they earned this month, how it was made up, what they have sold and the clients credited to them. Managers also see **Team & payouts**, **Monthly report**, **Clients**, **Freelancers** and **Rates**.

What counts

Commission is earned on **money received** in the month, **net of VAT**, on orders credited to the person (clients they sourced, plus the film and artwork they captured).

Pay bands — a fixed payout by the month's sales

The default scheme pays a fixed amount for the band the month's sales reached. It is a step, not a slice: you keep your band's payout until you reach the next band, then it moves up.

Band	Monthly sales (net)	Payout (KES)
0	Below 30,000	0
1	30,000 – 59,999	12,000
2	60,000 – 89,999	18,000
3	90,000 – 119,999	24,000
4	120,000 – 179,999 (the anchor)	35,000
5	180,000 – 239,999	38,000
6	240,000 – 299,999	42,000
7	300,000 – 359,999	48,000
8	360,000 – 399,999	54,000
9	400,000 – 499,999	58,000
10	500,000 and above	60,000

These are the starting figures. **Only an Admin can change the commission rates** (Commission → Rates): managers see them read-only, and staff see the scheme they are paid under. Film and artwork extras are paid on top. **Sales below KES 120,000 a month require performance improvement**: the person sees a warning on their own screen, and managers see the month marked *needs improvement*. An alternative scheme (a percentage of the sales above a target of 3 × salary) can be chosen instead in Rates.

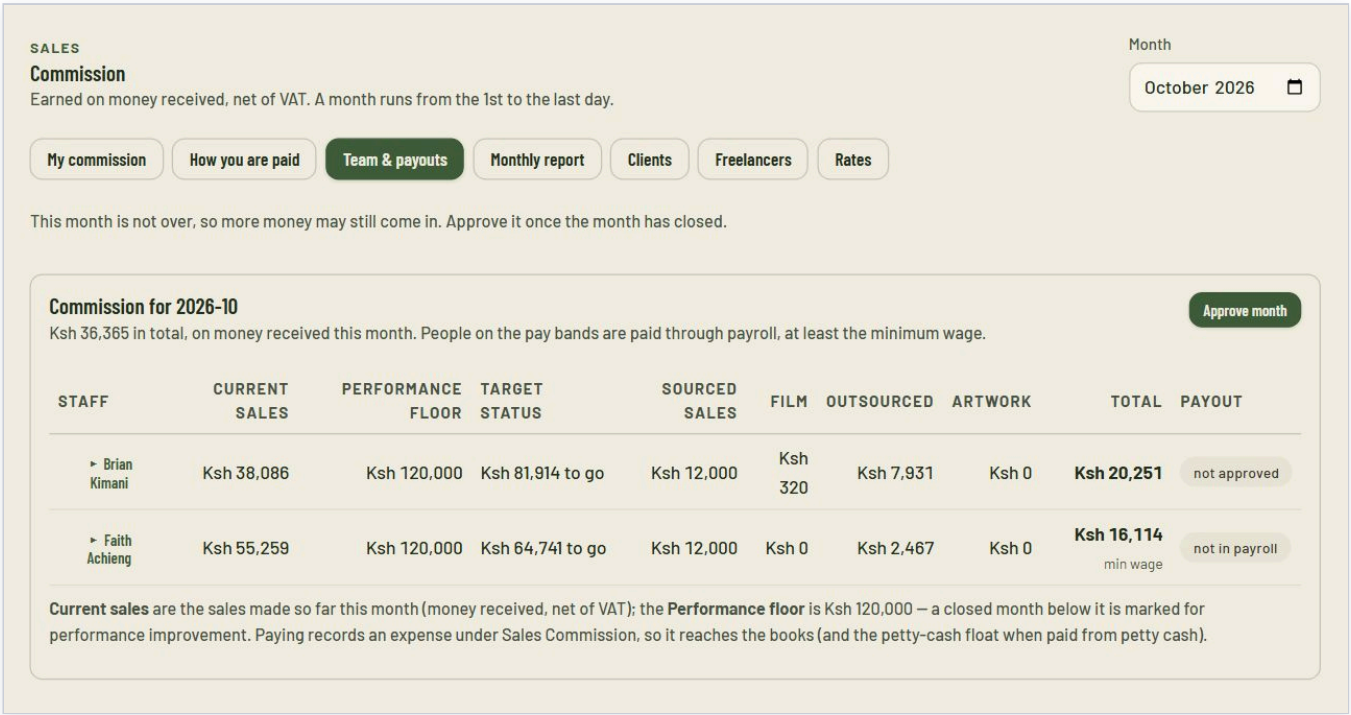

Figure 52 — Commission → Team & payouts: each person's current sales against the performance floor, sourced sales, film, artwork and total, with approval and payout status.

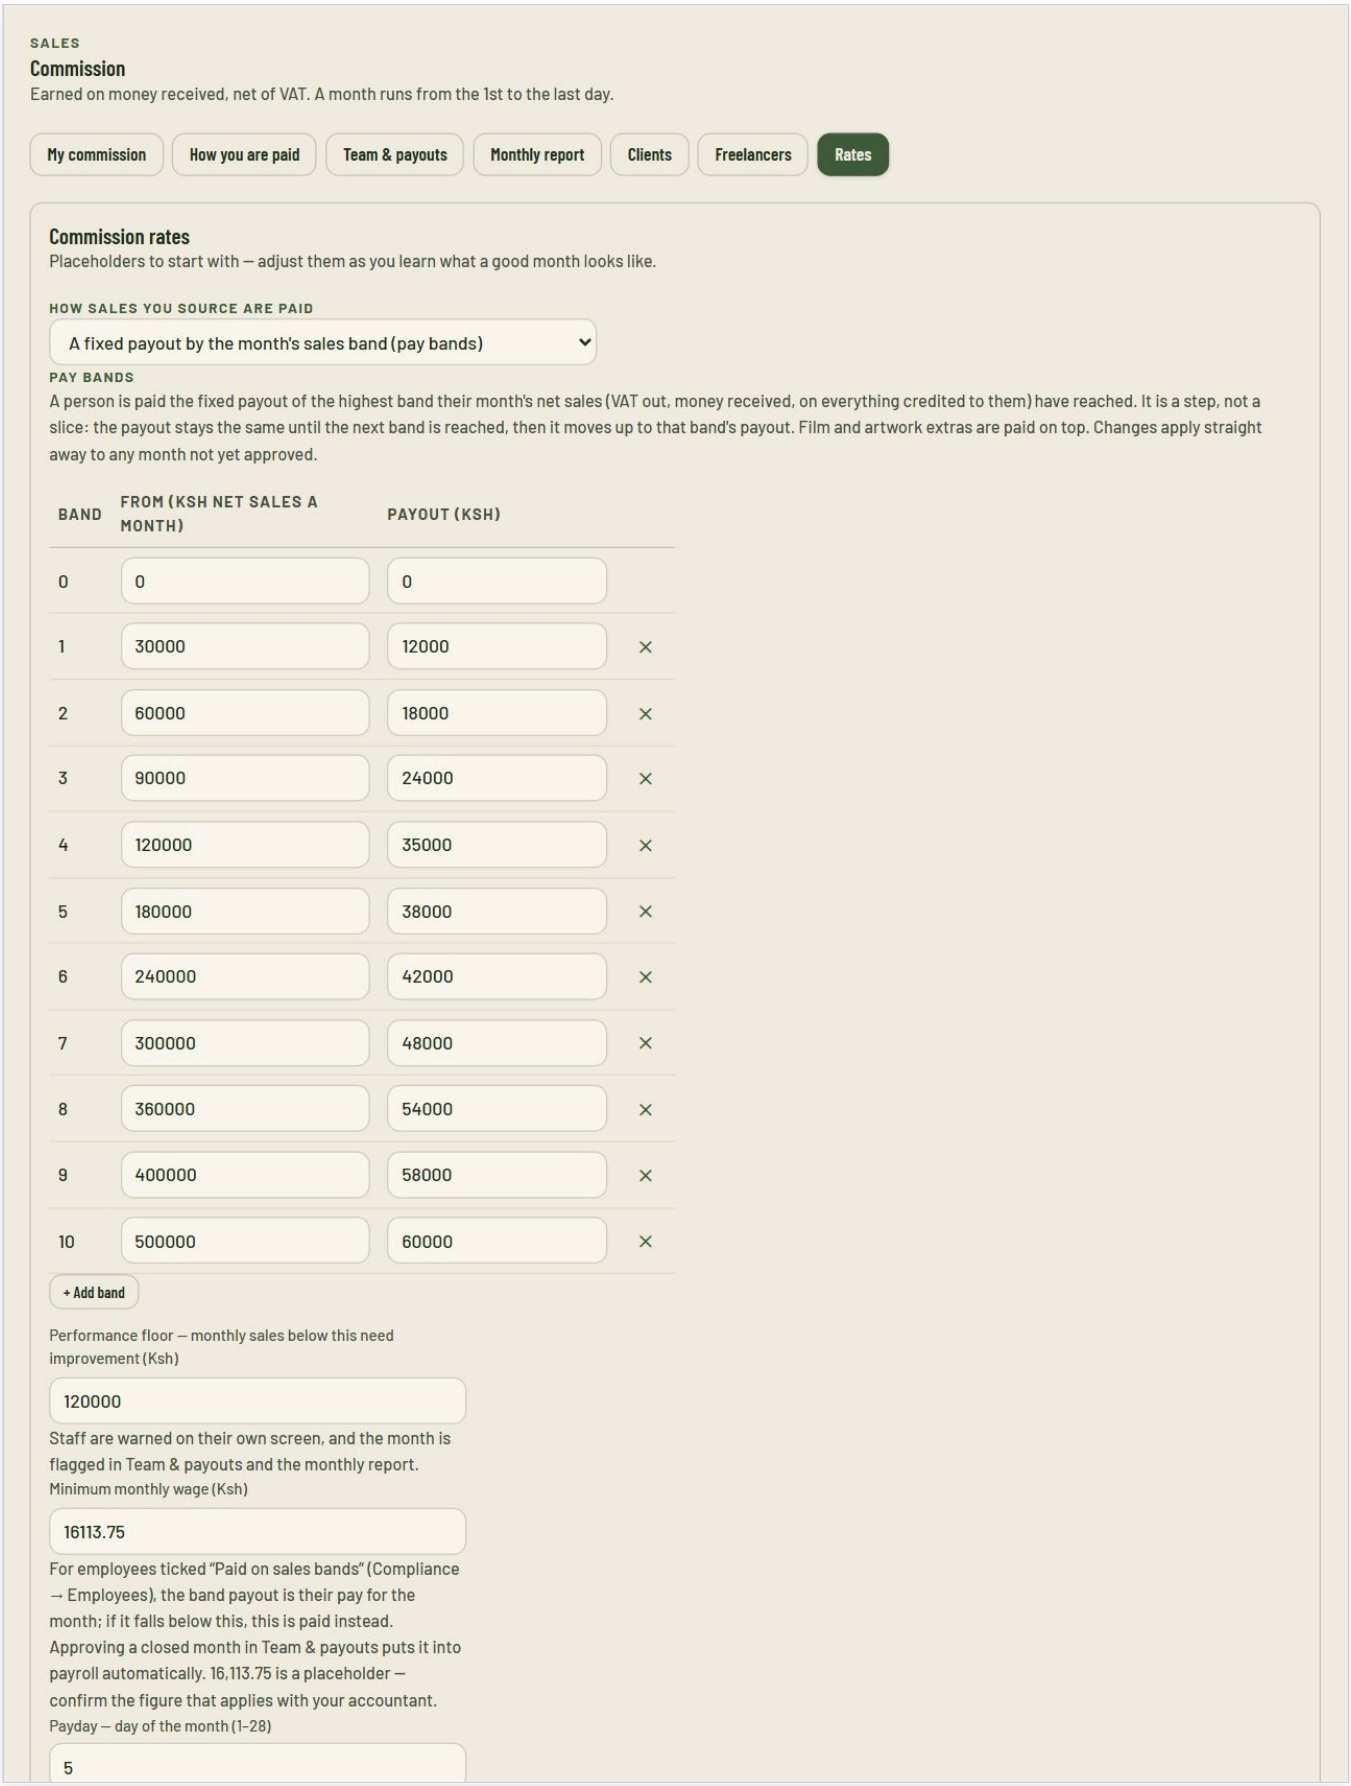

Figure 53 — Commission → Rates: the pay bands, the performance floor and the minimum monthly wage.

The Client Register: each sales person's clients

Open **Commission → Client Register** (a tab beside *Team & payouts*; everyone who captures orders sees it, and so does the front office, who capture for others). It is the list of clients each sales person has brought in — **name and phone** — and it is the same register commission uses for *clients credited to a staff member*.

- **Add a client.** A sales person adds their own clients: type the client's name and phone, or pick a **corporate account**, then **Add to the register**. The front office and commission managers choose **Whose clients** first and keep anyone's register. A client is recognised by their phone number (the last nine digits, so 0712 345 678 and +254 712 345 678 are the same), and belongs to **one sales person at a time**: adding a client who is already credited to someone else is refused until they are released (a commission manager does that with **Release**).
- **Pick them on an order.** On **General Order**, **Embroidery Order**, the box that opens for every **DTF, UV DTF, UV pen and UV flatbed** order, and when saving a **Job Costing** quote, a box **Pick one of your clients** appears at the top. The front office picks the **sales person** first (it is the same choice as *Who brought this order?*) and the box lists *their* clients; choosing one **fills in the client's name and phone**. A client in the register is also recognised automatically when their phone is typed, and the order is credited to their sales person.
- **Edit. Edit** corrects a name or phone; a new phone number cannot be one that belongs to another sales person's client.
- It works with commission: while an Admin has the commission scheme switched off (Master Data → Company Info) the register and the pick boxes are hidden.

Where the sales come from: a heading for each kind of sale

On **My commission** (and, for a manager, when a person is opened on **Team & payouts**) the block **Where your sales come from** splits the month by the kind of sale under **Sales** in the side navigation — *General Order*, *DTF Film Order*, *DTF Artwork Order*, *UV DTF Film Order*, *UV DTF Artwork Order*, *Embroidery Order*, *UV Pens*, *UV Flatbed Printing* and *Job Costing* (cards, signage, brochures, eulogies). A sale belongs to the screen it was captured through. For each kind the table shows:

- **Orders** raised and **Sold** — their worth with the VAT out, by the day the order was raised, paid or not;
- **Share** — how much of the month's selling this kind is;
- **Last month** — the same figure last month, with ▲ or ▼ and the change;
- **Team average** — what each person on the team sold of this kind on average;
- **Commission** — what this kind earned: the film and artwork premiums sit on their own kinds (DTF and UV DTF apart), and the commission the pay bands pay on sourced clients is shared between the other kinds in proportion to the money received on each;
- and a note: *Selling most here* for the biggest, *Behind the team average* for a kind where the person has sold less than the average, *Not selling yet* where they have sold none but others have. A kind nobody has sold, this month or last, is left out.

It changes nothing that is paid: it is only a view of the same month. Use it to see where you sell most and where you are behind.

The pay guide builds itself from your settings

Commission has a tab called **How you are paid**, open to every employee who sees Commission. It explains the pay model in plain language — what counts as sales, the pay bands and the ladder, the minimum wage, the monthly target, the film and artwork extras, take-home examples at every pay level, and the payday — and **every figure in it is read from Commission → Rates**. When an Admin changes a band, the target, the minimum wage, the film or artwork rates or the **payday** (a day from 1 to 28, set under Rates), the guide and each person's My commission screen show the change at once. **Print / PDF** on that tab gives an up-to-date copy to hand out.

Paying it

- For people on the percentage scheme, a manager **approves the month** in Team & payouts (once it is over) and then **marks it paid**; the payment is posted as a Sales Commission expense.
- **Paid on sales bands:** in Compliance → Employees tick this for employees whose pay *is* the band payout. Approving a closed month then puts their pay into **payroll** automatically (staff are paid on **the 5th of the following month**), **never below the minimum wage** (set in Commission → Rates). They carry PAYE, NSSF, SHIF and the levy like any employee, and no second salary is entered for them.
- The **Monthly report** shows each person's sales, target and commission month by month for a year, with what has been paid and what is still to pay. Pick the **year**, then use the month calendar under the year's totals: press a month (each shows its commission) to see just that month, or **All months** for the whole year, newest first. It opens on the latest month, and months with no figures yet are greyed out. **Print / PDF** prints what is on screen.

Sales persons paid as contractors (from the month you set)

Under Commission → Pay details an **Admin** sets **the month from which sales persons are paid as contractors** and the **standard withholding tax rate** (5% to start — confirm it, and how the tax authority will see this, with your accountant). **Before that month nothing changes.** From it:

- **A sales person's month is one total** — the pay-band payout, the film and artwork premium and any commission — and **withholding tax comes off that whole total**, at their own rate if they have one (0% for someone with an exemption certificate). The statement reads: *before tax*, *tax*, *what they receive*. They are **not in payroll** any more (no PAYE, NSSF or SHIF), whatever their pay-on-bands setting was.
- **Every order credited to a sales person** — allocated to them by the front office, or captured by them — counts towards their month, client or not; the clients in their **Client Register** stay theirs as before.
- **The minimum wage is not guaranteed** to contractors unless you switch *Top a month up to the minimum wage* on for that person (Pay details). With it on, a month below the minimum is topped up to it — even a month with no sales — and the tax is taken off the topped-up total.
- **Pay details** holds, for each sales person, their **KRA PIN** and **National ID** (the ones on their staff record), **phone and M-Pesa number**, how they like to be paid, bank details, their **own tax rate** and the minimum-wage switch. A person missing a KRA PIN, ID or M-Pesa number is flagged.
- **Paying:** once the month is over, **Team & payouts → Approve month** records each person's total and tax; then pay by **M-Pesa to their phone (automatic)** — Safaricom's answer settles it, and an answer that never arrives can be settled by hand with *Settle…* — or **Mark paid** by cash, bank or cheque with a reference. Either way it is booked as **Sales Commission** with the tax held in **Withholding Tax Payable**,

and shown under **Freelancers → Tax withheld** (the month's report and the year's statement for each person, for KRA and for their return).

- **Freelance accounts are retired.** No new one can be added, no order can be credited to one, and the "brought by a freelance sales person" choice no longer appears on the order screens. The Freelancers area becomes an **archive**: weeks from before the change can still be approved and paid, and the old payments stay in the tax report.
- The sales person's own **My commission** and **How you are paid** show the same: the total, the tax, and what they receive.

Freelance sales persons (until the month sales persons become contractors)

The same explanation, written from the current rates, is on screen in **Commission → Freelancers → How it works**, with worked examples that change when a rate is changed.

How it is worked out. A freelance sales person earns **a flat percentage of the net sales received** (the money the client actually paid, VAT taken out): **8%** to start, and a lower **4%** on the part of an order that is contracted-out work or stock resale, which carries only a thin mark-up. There are no bands, no premium share and no base-price test: a discount just means a smaller sale, and a smaller commission. Unpaid money earns nothing until it is paid, and a refund or credit note takes its share back.

Setting and changing the rates. Commission → Freelancers → Rates holds the two percentages, **how many months a client stays theirs** while orders keep coming, and the **withholding tax** deducted from their pay. **Only an Admin can change them**, as often as needed; managers who see Commission can read them but the boxes are locked. The table *What it pays, at these rates* shows, for sales of Ksh 100,000 to 1,000,000 a month, what the freelancer earns, what they receive after tax, what the company keeps of the gross profit (at the gross margin you type in — 50% to start) and what share of the gross profit is paid out, so you can see the effect of a rate before you save it. Press **Save the freelance rates** — **Discard changes** puts back what was saved, and **Use the suggested starting rates** fills in 8% and 4% (nothing changes until you save). A change applies **from the moment it is saved**: a week is worked out at the rates in force when it is **approved**, so a week that is already approved keeps its amount until it is approved again, and a **paid week never changes**. Every change is recorded in the audit trail (Master Data → Security). **How it works** is always written from what is saved.

How an order becomes a freelancer's. Whoever captures an order marks it as *brought by a freelance sales person* and picks them; a new person added at capture waits for a manager's approval before anything is paid to them. An order marked for a freelancer is **credited to them alone**: no staff member earns commission on it and it counts towards no staff target. A named client with a phone number (or a corporate account) becomes the freelancer's client the first time they bring them, and stays theirs while an order comes at least every **12 months** (each order restarts the count; a manager can release a client early), whoever captures it. A client who belongs to a staff member cannot be given to a freelancer, nor the other way round.

What counts. Everything the client pays on an order credited to the freelancer, net of VAT. The part of an order that is contracted-out work or stock resale is counted at the lower rate; the rest at the standard rate.

Paying it. After the week closes (Sunday) a manager presses **Approve week**; only **Active** freelancers are approved (a new or suspended one is listed as skipped, with the reason). Each approved person is paid by cash, cheque, bank or M-Pesa recorded by hand, or sent straight to their M-Pesa phone; paying books a

Freelance Commission expense. An approved week can be taken back before it is paid; a paid one cannot.

Paid **weekly** (Monday to Sunday) on **money received**, **net of output VAT**, on the orders credited to them. Input VAT never comes into it, because they are paid on sales, not on profit. The rest of this section sets out how.

- **Commission** — a flat **8%** of the net sales received in the week (**4%** on contracted-out and stock lines); both rates are set by the Admin under Freelancers → Rates. A single sale of KES 10 million (8.62 million net) therefore pays about **KES 690,000**: the rate does not fall with the size of the deal, so look at very large deals before accepting them.
- **Withholding tax** (5% by default; a person can have their own rate, or 0 if exempt) is deducted from what they are paid, and appears under **Commission → Freelancers → Tax withheld** for the KRA return.

The company's side. The commission is a business expense, so corporation tax (30% for a resident company) is worked out on the profit *after* it; **Compliance → Corporation tax** does that from the books. Because the commission is a share of the sale and not of the profit, keep the rate where the profit left after overheads stays healthy — at a 50% gross margin, 8% of net sales is 16% of the gross profit.

Staying compliant at year-end. Every payout is booked as a **Freelance Commission** expense, so it lowers the profit the income tax is worked out on. Keep each person's **KRA PIN and national ID** on file (the screens list anyone missing them), pay the tax withheld over to KRA each month, and use **Commission → Freelancers → Tax withheld** for the **Freelancers' year**: what each was paid in the calendar year, the tax withheld and what they received, ready to print for them and for your accountant.

Paid **weekly** (Monday to Sunday) on the sales they bring at or above base prices, in marginal bands, plus a share of what was charged above base. **Withholding tax** is deducted from their pay (a standard rate, or their own rate, or exempt) and appears in Payments due. They are paid by any method (M-Pesa, cash, cheque, bank, card).

People (HR): leave, off days and performance

People (HR) (under Operations in the menu) is where leave is asked for and decided, where you see who is off, and where reviews are kept. Everyone with HR access asks for their own leave and sees the calendar; the General Manager and Admin (anyone given *People (HR): decide leave, see everyone, reviews and policy* under **Master Data → Roles & Access**) also see the Overview, everyone's leave, Performance and Policy. A person without a manager role sees **My leave** and the **Off-day calendar** only.

- **+ New leave request.** Choose the type (Annual, Sick, Off-in-lieu, Unpaid, Maternity, Paternity), the first and last day, and a note. The box shows the **working days** it uses (the weekly days off, public holidays and company off days are not counted) and your **balance after**. It is refused if the dates overlap another request, the last day is before the first, you ask for more than you have, or a sick leave past the certificate limit has no medical certificate ticked.
- **Leave requests.** Your balances at the top (days left of what you have earned, taken, waiting, carried over), then every request with its status. A manager presses **Approve** or **Reject** (a reason is needed, and the person sees it); nobody decides their own leave. If approving would leave fewer people at work than the minimum, the manager is asked to confirm. You can cancel a request still waiting; a manager can also cancel an approved one, and the days go back to the balance.

- **Off-day calendar.** One month at a time (arrows, or pick a month). Approved leave is a filled name, a request still waiting a dashed one; weekly days off and public or company off days are shaded, and a day below the minimum at work is red. Others' kind of leave is private: only managers (and the person) see whether it is sick or annual.
- **Overview** (managers). Staff at work today, requests waiting, leave taken this month, the **leave liability** (unused annual days at each person's daily pay, basic salary ÷ 30; people with no salary on record are noted), who needs a decision, and cover for each working day this week.
- **Performance** (managers). For a quarter: each person's sales against their target, orders captured and commission earned (from the books, as in Commission), leave taken; and your review of them: goals met of goals set, a score out of 100, a note, and **one-to-one notes**. Save a draft, or complete the review.
- **Policy** (managers). The kinds of leave and what each allows (days a year, whether it is paid, earned a month at a time or from January, how many days carry over, when a certificate is needed); the weekly days off and the fewest people at work; the public holidays and company off days (the fixed Kenyan holidays are added for you; add the ones that move, such as Good Friday, Easter Monday and Idd-ul-Fitr); and each person's **start date**, from which annual leave is earned (no start date counts as a full year).

The figures that come with the system are the Employment Act's minimums (annual leave 21 days a year earned monthly with up to 5 carried over, sick leave 7 days, and so on): change them to your own policy. Leave is a record and a decision here: it does not post to the books or change payroll yet, so unpaid leave is still taken off pay in Compliance → Payroll by hand.

---

15 Reports

Open **Reports** and choose a date range (Today, This month, This year, or any From/To).

Report	Answers
Sales	Every sale in the period with totals. Matches the books and the VAT return exactly.
GLM vs Sales Persons	How **GLM's own** sales and the **sales persons'** compare over the dates chosen: for each side the orders, the sales (net of VAT), the average order, the clients, and what has been paid and what is still owed; then the split **by line of business** and **month by month**; then each **sales person ranked** — orders, sales, share, average order, clients, and what they were paid (before tax) as a share of what they sold. Quotations are left out. "GLM's own" is what the front office allocated to GLM; "sales persons'" is what is credited to a sales person. Orders from the old freelance accounts are shown on their own line.
Sales by Business Head	For each line of business — DTF, UV, laser, large format, embroidery, general — the orders, sales (net of VAT, after discounts), costs and margin, with the services inside each. Costs that belong to no line show separately as *Shared* (rent, wages, utilities). How the Sales screens land in it: a service counts under its own business head; **a material sold with a service** (a shirt on an embroidery order) counts under the head of that service, and a material sold on its own is General Order; **DTF Printing** and **UV DTF Printing** show their **film sales and artwork sales** apart (the costs belong to the head as a whole); **UV pens** count under UV DTF Printing; costed **business cards, eulogies, company profiles and brochures** (Job Costing) count under **Printing & Publications**, and costed signage under Large Format Printing. The **Collected** column is the money actually received in the period on each head's sales (VAT out, less refunds, by the day it was paid) — the same measure Commission is paid on — to set beside what was sold.
Sales by Category	Revenue by individual service, with plain product sales in their own bucket, to rank which services and machines earn the most.
Embroidery Profitability	Embroidery revenue against thread, needles and other costs, with the effect of the quantity price and the set-up lines.

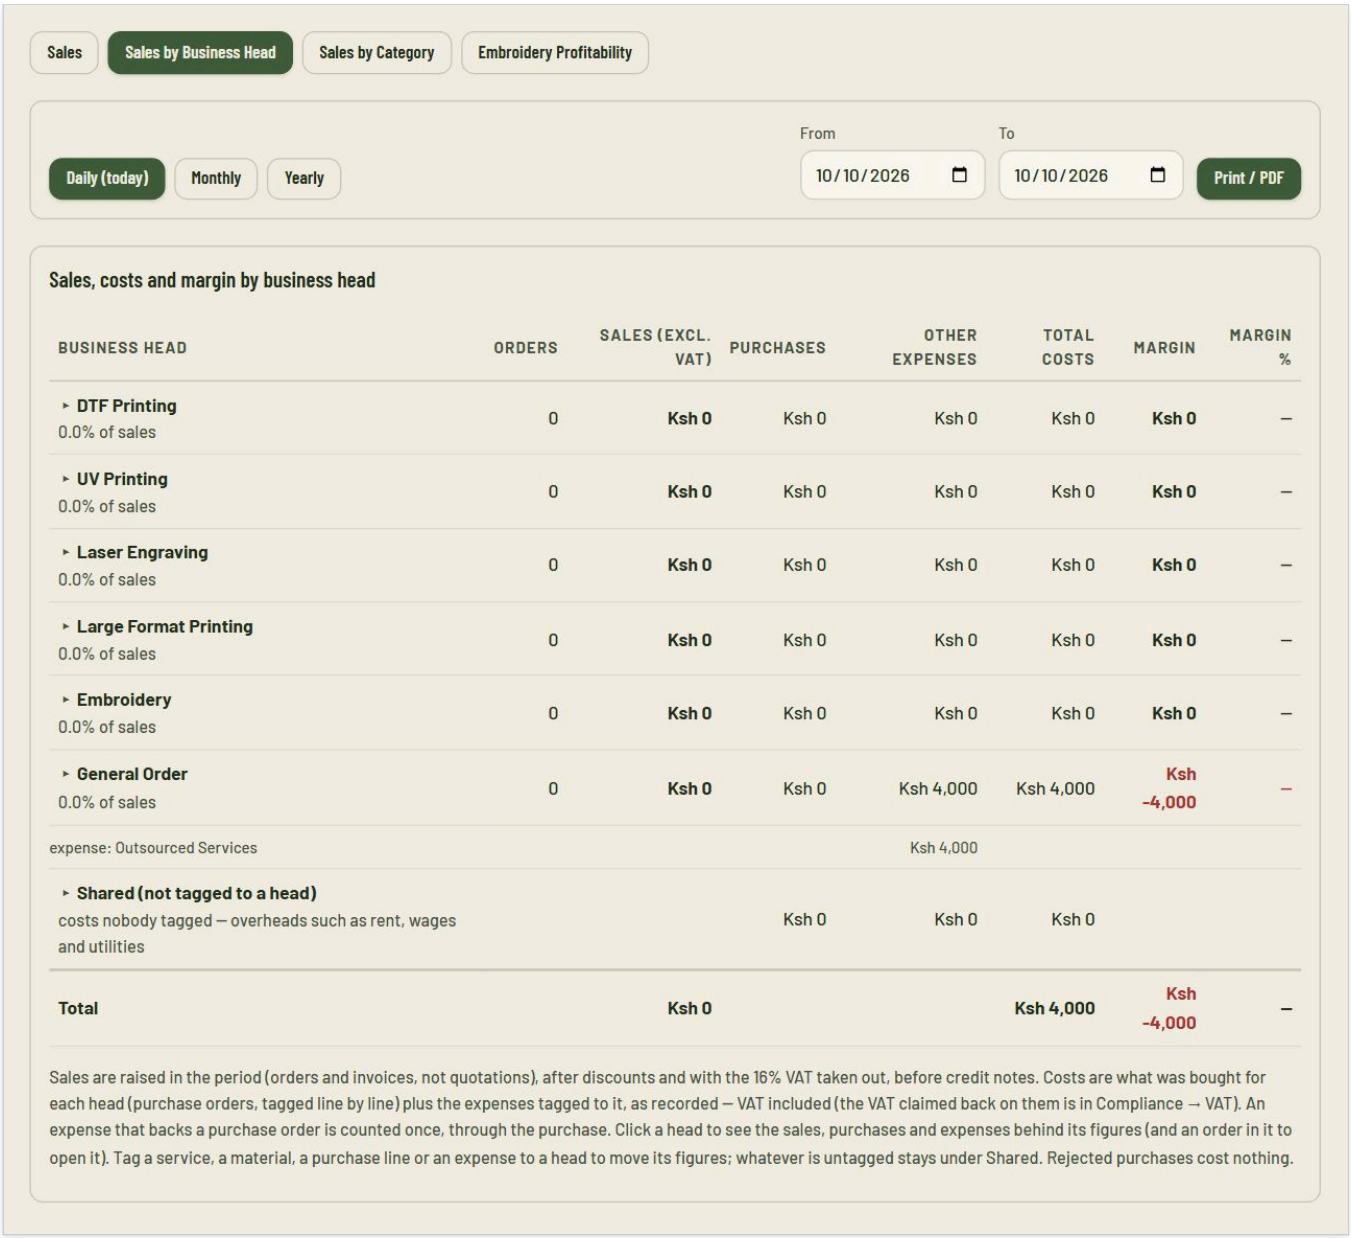

Figure 54 — Reports → Sales by Business Head: orders, sales, costs and margin for each line of business.

Elsewhere: **DTF → Dashboard** for roll profitability, **Accounting → Profit & Loss** for the full statement, **Commission → Monthly report** for sales and commission by person.

16 Master Data reference (Admin)

Tab	Purpose
Staff & Users	People, roles, PINs, email, order-taking switch, edit, reset PIN, delete.
Roles & Access	What each role may open or do. Admin is always everything.
Service Price List	Services, units, prices, descriptions, sizes, heads, pressing fee and area pricing; Excel download and upload. The list is shown in two parts: the ordinary services, then **Artwork-priced services** (priced by the size of one artwork). Ticking or unticking *Artwork pricing* on a line moves it between the lists.
Business Heads	The lines of business that sales and costs are reported under.
Stock Price List	Stocked items, sizes, prices, reorder levels, usual business head; Excel download and upload.
eTIMS Codes	The KRA item class code, unit and item type every business head, service and stock item is sold under (preparation for KRA eTIMS — see below).
Discount Rules	The discount ceiling above which supervisor approval is required.
Company Info	Company and system names, logo, addresses, phones, web and social, tax details, the commission switch.
M-Pesa	Daraja connection (Paybill/Till, keys, sandbox/production); register payment addresses.
Embroidery Pricing	Stitch-count rates, quantity table, set-up and design charges.
NCBA	NCBA Bank's STK push and payment notification settings.
Email	Sending account for invoices, quotations and PIN emails.
WhatsApp	WhatsApp Business connection for sending PDFs.
Backup	Back up now, download, schedule, restore, Google Drive.
Security	Protections status, Admin sign-in code, audit log.

eTIMS Codes — getting every item ready for KRA eTIMS (Admin)

This is **phase 1 of the KRA eTIMS connection: the mapping only**. Nothing is sent to KRA yet. **Master Data → eTIMS Codes** records, for everything we sell, the details KRA asks for when an item is registered, so that the invoices can be submitted later without anyone having to fill them in. **Every sale is VAT type B (16%)**, so there is no tax choice to make.

- **What is held.** The **item class code** (KRA's classification code — it is UNSPSC-based and may run to 10 digits), the **quantity unit** code (piece, metre, square metre…), an optional **packaging unit**, the **item**

type (*service*, *finished product* or *raw material*) and, for imported goods only, the **HS code**. The HS code is not what KRA uses to classify an item; it is kept for imports.

- **The head decides, a line can differ.** A line with no code of its own uses its **business head's** — so most of the work is the **Business head defaults** table (a handful of rows), and only the odd line needs its own code. This also covers sizes: each size of a service is its own price-list line, and all inherit.
- **Job costing.** A costed job is one order line against a *Costed job* service for its job type (business cards, brochures and the like under Printing & Publications, signage under Large Format Printing). It therefore takes the code of its head, whatever the price quoted.
- **Proposed, then confirmed. Use the proposed list** fills in what is empty, and never overwrites anything already there. The proposals are **drafts, not KRA's list**: a code is proposed only where there is some evidence for it (digital printing for the UV, large-format and printing heads; textile printing for DTF), and every other line shows **the words to search for** in the item-class search of the eTIMS portal. Check each code in the portal, then **Confirm** (one head, or all proposed). A line you save by hand is confirmed at once. The status of every line is *Needs a code*, *Proposed* or *Confirmed*, and the filters above the list show each group.
- **Excel. Download Excel** gives every head, service and stock item with the columns to fill in; give it to your accountant, then **Upload Excel**. The upload is checked first and nothing is saved until every row is usable. A row marked *Confirmed* in the Status column is confirmed; any other is kept as proposed. Leave *Kind* and *Id* alone; blank code columns put a line back on its head's code.
- **What comes next.** Later phases will submit invoices (once the job is **complete and every shilling is received**), send credit notes, report stock and handle supplier invoices. Until then nothing here changes how orders, receipts or VAT work today.

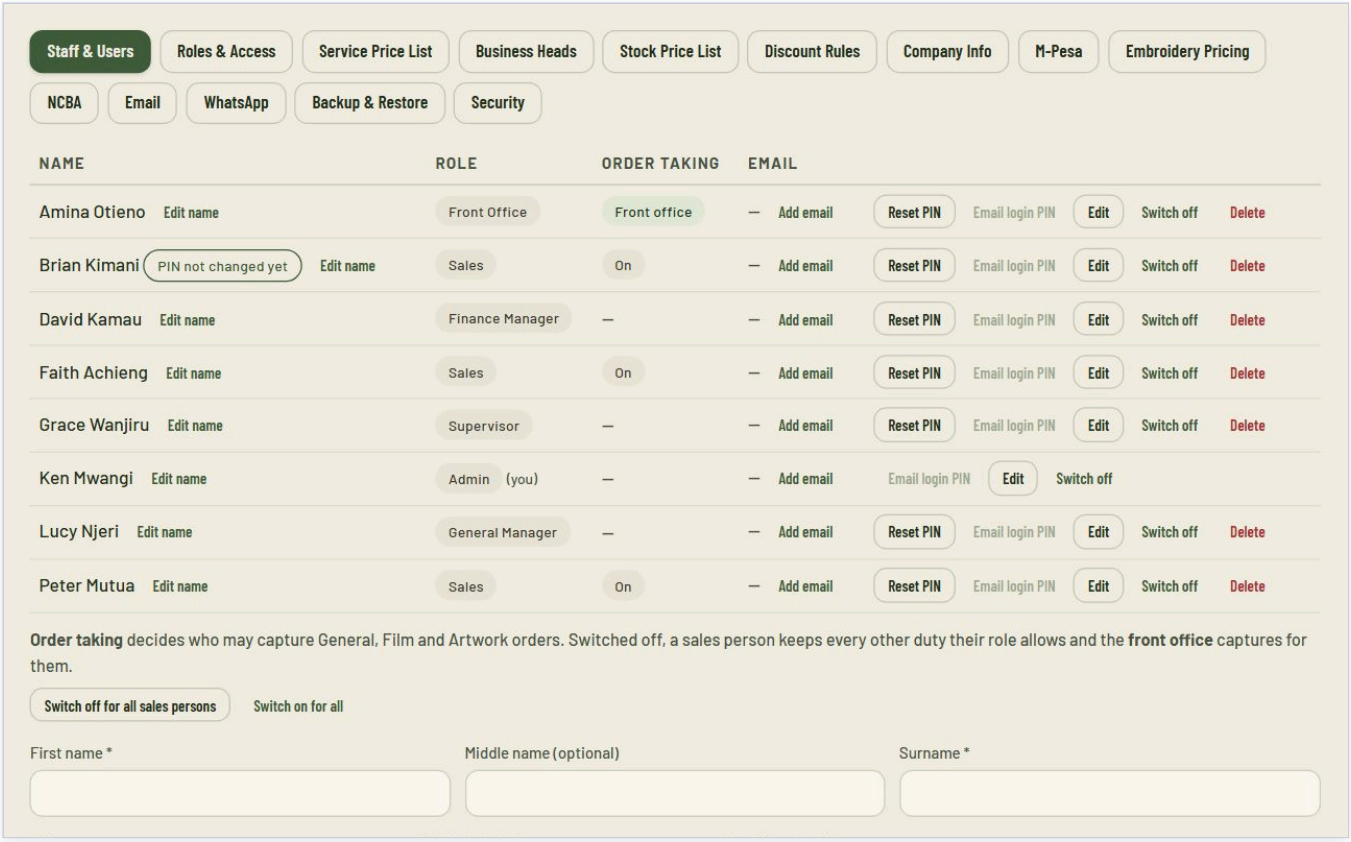

Figure 55 — Master Data → Staff & Users: add a person, reset a PIN, edit, switch off or delete. Names are kept in three parts.

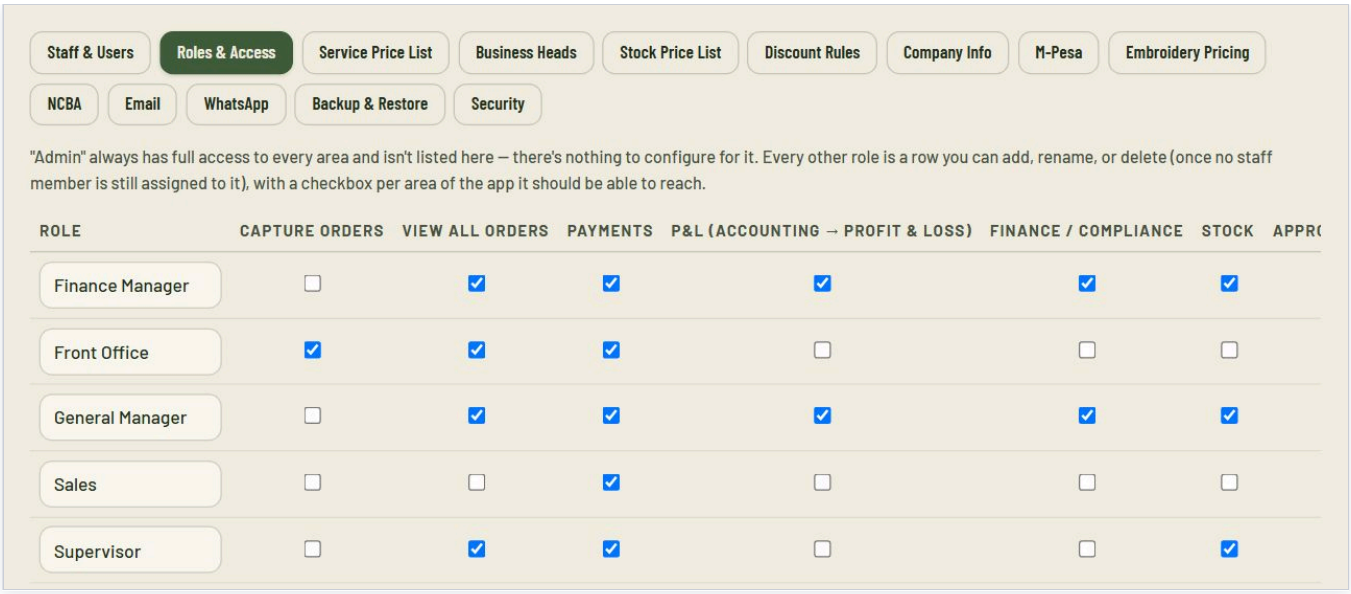

Figure 56 — Master Data → Roles & Access: tick what each role may open or do.

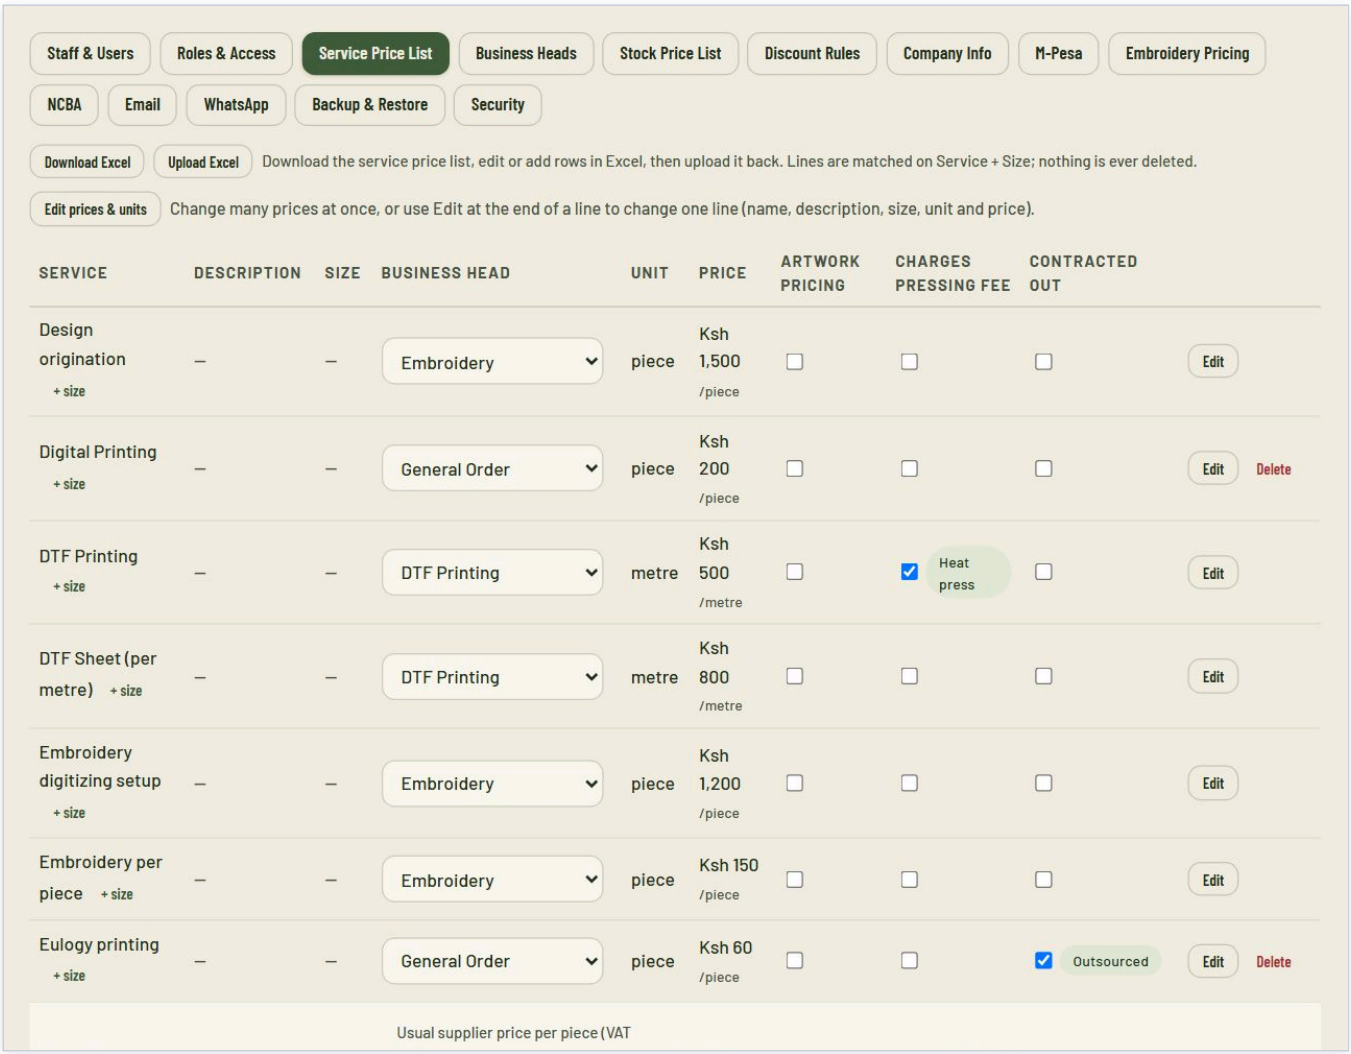

Figure 57 — Master Data → Service Price List: unit, price, size, business head and the special flags, with Excel download and upload.

17 Security, backups and audit

- **Everyone signs in with their own PIN.** Five wrong PINs lock the account — 15 minutes the first time, then 30, 60 and so on, up to a day.
- **Permissions are checked on the server** at every request, not only by hiding menu items. A person sees every order only if their role says so; everyone else sees the orders they captured.
- **Two-person control** for amending or deleting expenses, payroll entries and petty-cash top-ups; approving requisitions; approving artwork or embroidery price cuts; receiving purchases. Nobody approves their own work — with one exception for stock: see *The Admin and purchasing*.
- **Audit log** (**Master Data → Security**): every change made in the system, every refused request, sign-ins and sensitive downloads — who, when and from where. Passwords, PINs and codes are never recorded. Kept for two years. The same screen lists what is switched on to protect the system and what still needs doing.
- **Backups** (**Master Data → Backup**): a complete copy of every record as one file. Set an automatic schedule (every 6 or 12 hours, daily, every 2 days or weekly; the newest N are kept), download copies, and optionally copy them to Google Drive. **Restore** asks you to type RESTORE and saves the current system first; a failed restore changes nothing.
- **Switching a person off** ends their sessions immediately but keeps their history.

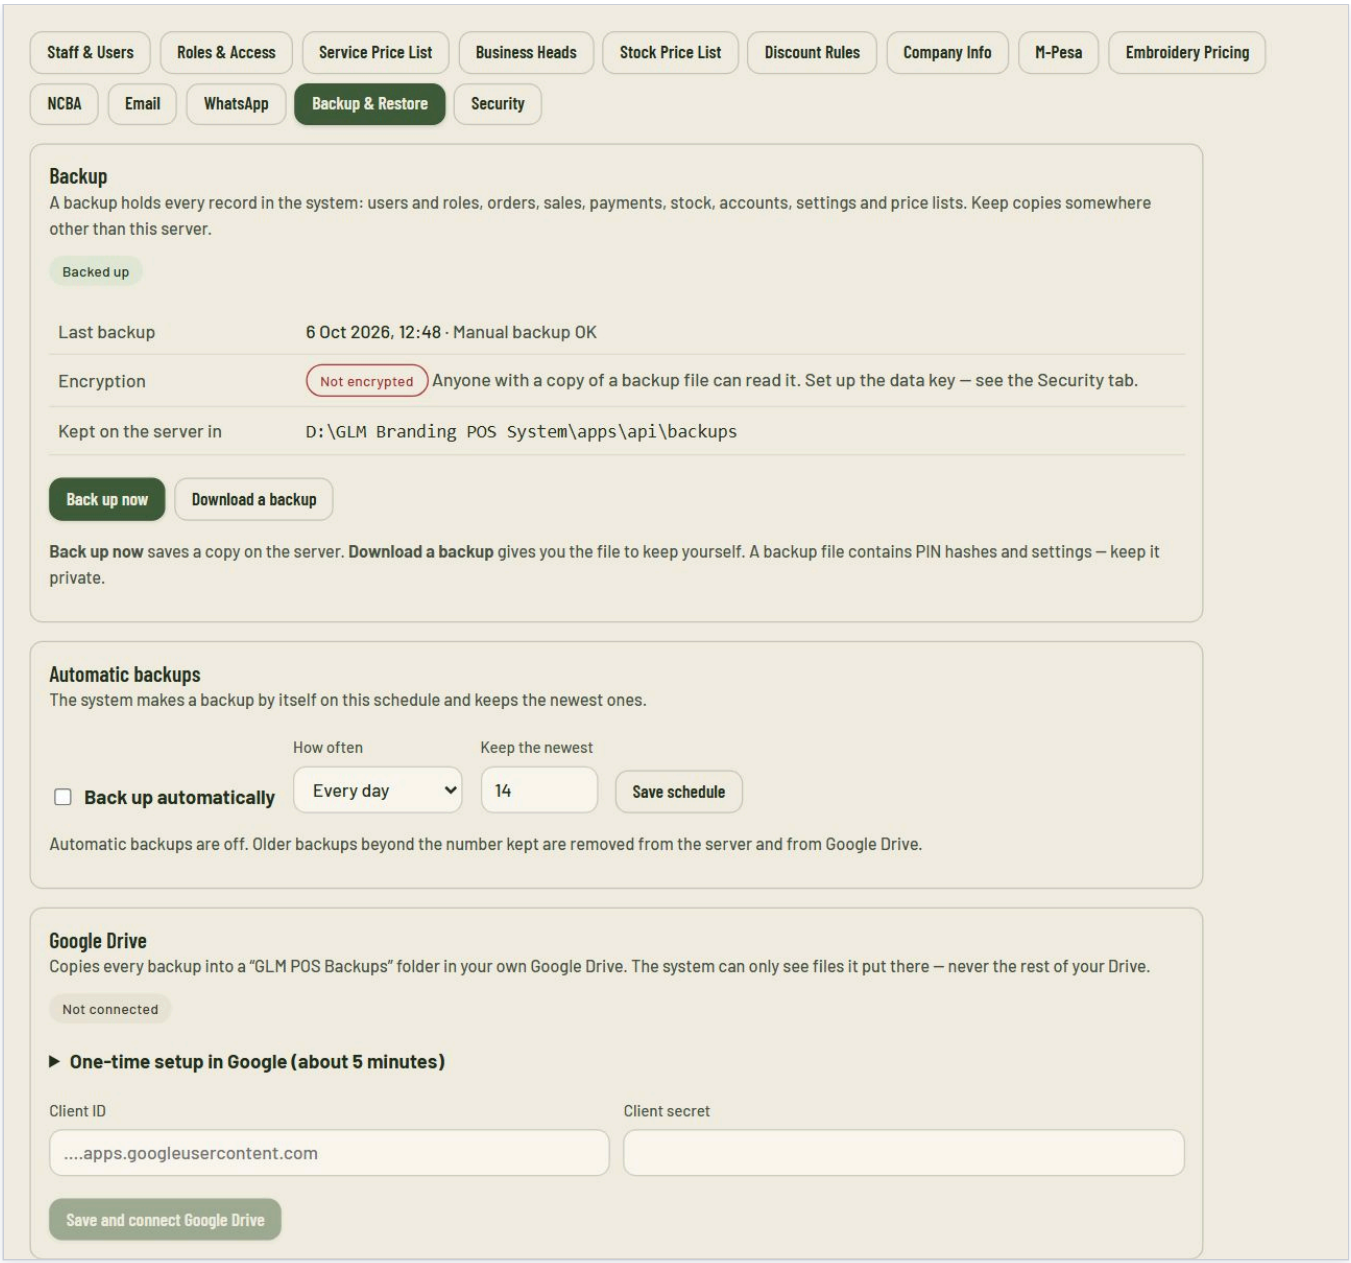

Figure 58 — Master Data → Backup & Restore: back up now, download, set the schedule, restore, and connect Google Drive.

18 Daily, weekly and month-end routines

When	Who	Do
Every day	Front Office / Staff	Capture orders, take payments, print receipts. Check *Pending Payments* before handing over.
	Supervisor	Assign waiting jobs in Production. Inspect finished work in Quality Control. Approve discounts above the ceiling.
	Manager	Decide DTF and embroidery *Price Approvals*. Receive purchased goods.
	Finance	Record expenses and supplier bills. Confirm M-Pesa payments that were not matched.
Every week	Finance	Pay freelance commission. Upload the M-Pesa statement and match. Chase *Receivables*.
	Stock	Review reorder alerts, raise requisitions, approve, order. Reconcile purchases.
	Manager	Check **Sales by Business Head** and the DTF dashboard.
Month-end	Everyone	Make sure every order is paid or on an invoice, and every expense is recorded.
	Stock	Do a *Stock Take*.
	Finance	Enter payroll. Run **Books Check**. Review the P&L and Balance Sheet.
	Finance	Open **Payments due**, write the cheque, then record the remittances as journals.
	Manager	**Approve the month** in Commission → Team & payouts (puts pay-band staff into payroll) **before payday, the 5th**.
	Admin	Confirm a recent backup exists.

19 Troubleshooting and questions

A CORRECT PIN "DOES NOT WORK"

After five wrong tries the account is locked — 15 minutes the first time, then longer each time. Wait, or ask an Admin to reset your PIN (Master Data → Staff & Users → Reset PIN).

I CANNOT SEE A MODULE

Your role does not include it. Ask an Admin to adjust your role in Master Data → Roles & Access. After a change, sign out and in so the menu refreshes.

I CANNOT SEE ANOTHER PERSON'S ORDERS

You see the orders you captured unless your role has *View all orders* (or Payments, Production assignment, DTF manager, Quality control, Finance or Accounting).

THE PRICE WILL NOT GO LOWER

The system enforces minimum prices on film, artwork and embroidery at the server. To go lower, use the route that exists for it: the quantity price on embroidery, or a lower artwork price, and wait for the manager's approval.

AN ORDER WILL NOT HAND OVER

It must have passed Quality Control (stage *Ready for Pickup/Delivery*). If money is owing, take the payment or choose **Hand over on credit**.

A PAYMENT FROM PETTY CASH IS REFUSED

The float cannot cover it on that date or a later one. Top up under Finance → Petty Cash, or choose another payment method.

THE M-PESA PROMPT DID NOT COMPLETE

Ask a manager with the Payments permission to confirm by hand with the 10-character code from the customer's SMS. Check the M-Pesa connection test in Master Data → M-Pesa.

THE SYSTEM IS SLOW TO LOAD

Hard-refresh the page (Ctrl+Shift+R) after an update. If it persists, tell your administrator; slow requests are logged on the server.

WHERE IS MY DATA KEPT, AND CAN I LOSE IT?

On your own server. Automatic backups protect it; confirm yours is running under Master Data → Backup.

GLM Branding POS & Accounting — User Guide. Figures shown (prices, bands, rates) are the starting values supplied with the system; your own settings may differ.
